Mumps and Poetry.

DEAR EDITOR:—My papa takes the RURAL, and we all like it very much. I love to read the letters that the boys and girls write, and I do not go to school, but recite to Auntie. I study English and Latin grammar, geography, arithmetic and spelling. Then I read physiology, and have lessons in drawing. I hope to be a good scholar when I am grown up, and a useful woman.

When I had the mumps I wrote a piece of poetry, because I did not know what to do. I will send it to you. I am a little girl only ten years old, so you cannot expect me to do as well as LONGFELLOW, or any other poet, would. Here is the poetry.

THE MOON.

In the starry sky you sail,
With your silvery light so pale;
Shining bright
In the night,
When the sun is gone.
Peeping o'er the tree-tops green,
Covered with a silvery screen;
Climbing high
In the sky,
O'er the shady lawn.

Pale-eyed moon, we love thy light,
Giving brightness to the night;
With the dawn
Thou art gone—
Gone but for a day.
When the stars come twinkling out,
Thou art sliding round about—
On the hills,
O'er the rills,
Sending down thy ray.

ETHEL A. D.

A Good Grandmother.

I WOULD like to tell the little boys what a good home I have. I am only five years old. My mamma is sick all the time, and I live with my grandpa and grandma. I told mamma if I had anybody else for grandma I would change and get this one; she is the best grandma I ever saw. She said that when she was a little girl her sister married, and went off a hundred miles; (it took three days to go a hundred miles then;) she cried, and asked her father if she had got to get married and go *way* off. That made me cry. I told her if she had got married and went way off, I should not have any grandma. Last Summer we went a berrying; we heard the birds sing. Grandma asked me if they said, "Bobolink, what do you think? or was it 'Phebe?'" I guessed it was "Captain Jinks." Uncle set a trap for crows, and caught a blue jay, and I had that a while. I live close by a little brook, and if you will come and see me, we will fish. FREDDIE.

About a Country Fair.

As you do not hear how the boys are getting along up in St. Lawrence Co., N. Y., very often, I thought I would write you a few lines first. I will tell you about the Potsdam Fair. It was the third Fair of that Society; the receipts were six thousand two hundred dollars. It held four days. I went with my poultry, and took first premiums on the following kinds:—Silver Hamburgs, Silver Polands, Golden Polands, Black Spanish, Bolton Greys, Silver Pheasants, White Georgian Games, and one coop of mixed fowls; and second on Golden Pheasants. There was a horse called British Splendor, owned by the Huntington Importing Company; he was very handsome. There were some nice Imported Alderney cattle, owned by Messrs. RUTHERFORDS of Waddington. It is supposed the four largest oxen in the world were there. The floral hall was filled with fine things. The music and flowers drew a crowd around them. Prof. PETER COLLIER of Burlington, Vt., delivered the address. G. H. C. E.

A Paper House.

DEAR EDITOR:—I am a little boy, fourteen years old, and we take the RURAL NEW-YORKER. I have got a nice little colt two years old, that I am breaking. Have seen Professors York and Williams train horses, and think it learnt me a great deal about breaking my colt. I go down to the Sound every Fall and camp out with an older brother, and an officer that was in the army let us take his tent; but he has gone away now, so that we cannot have it any more. I think that I shall build a nice little portable house. I think I saw in your paper, some time ago, an advertisement of paper sidings and roofings, and have searched all the back numbers that I could get to find it, but could not. Now, dear Editor, can you tell me where I can buy this paper to make my house out of? If so, I shall use that instead of boards. I shall be very careful to save all the numbers of the RURAL NEW-YORKER hereafter.

JOHN COMSTOCK.

What One Boy Knows.

I LIKE good horses, and I know how to take care of them. My father is gone most of the time, so that I and my brother have most of the farm work to do. The boys in this county can find a plenty to do, and some of us have to walk over two miles to school. We are pretty hungry when we get home at night. There are plenty of prairie wolves here and rattlesnakes. We lost a horse in harness from the bite of a snake. I have a good chance to make money; my aunt wrote to me, if I would get subscribers for the RURAL NEW-YORKER, I might send her the names and keep the money. I have not had much time, but I have four names. I want to tell the boys two things that I have learned; one is, when a cow gets choked, don't punch her throat with a straight stick; nor turn horses out to run if one is shod.

A. J. MCKINNEY.

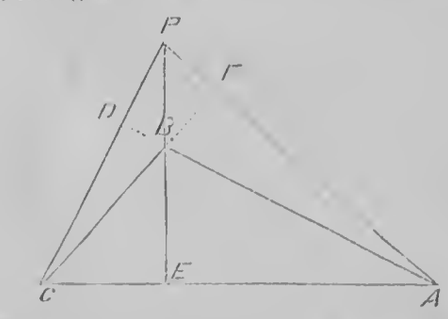
The Burning Bush.

MR. EDITOR:—I am not as young as some of the little girls and boys, nor is this the first letter I have written for the paper. I want to ask the little readers if they ever read in the Bible about a bush that burned, but was not consumed! Will you find it? Perhaps your mother will help you, or better still, you can find it yourself. Now, directly in front of my window is a rose bush. When we draw our table for the evening, and place the lamp in front of the window, the light shines on the bush, and it seems on fire; so we have a picture of a burning bush, yet the bush is not consumed. LIZZIE.

The Puzzler.

PROBLEM.—No. 7.

THE three perpendiculars of a triangle, when produced, intersect each other at a point without the triangle, situated 20, 8 and 6 rods, respectively, in perpendicular distance from its base and sides produced. Required, the sides of the triangle.



Scale of figure 20 rods to the inch. E P=20 rods; F P=6 rods; D P=8 rods.

B. F. BURLESON.

☞ Answer in two weeks.

DOUBLE ACROSTIC.—No. 1.

1. A color.
2. Unrefined metal.
3. A kind of boat.
4. A beverage.
5. Above.
6. A corner.

The initials and finals name two American cities. J. M. S.

☞ Answer in two weeks.

PUZZLE.—No. 8.

I HAVE five letters, and am the same whether you read me forward or backward. Each end cut off, loses me 1,000, but leaves me a daughter of a poet. Take my center, and I lose 500 more, but keeps a mother on one side and a verb on the other. My 3d and 4th give a division of time; my 1st and 2d a month, and my 2d and 3d the current year. My center is an arithmetical sign, and so is my 2d and 3d. My first three express a state of mind which may make you use my whole as a lady's address. What is it?

☞ Answer in two weeks.

Which beauty shows, and sheds perfume;
The flowers which yield the most of both
In Nature's wild luxuriance bloom."

News of the Week.

THE BURNING OF BOSTON!

ALMOST A CHICAGO!

A TERRIBLE calamity has fallen upon Boston, Mass., second only to the great fire in Chicago of thirteen months ago. At 8.30 on the evening of the 9th (Saturday) a fire broke out at the corner of Kingston and Summer streets, and in a short time got beyond the control of the fire department. A gale of wind sprung up and before the intense heat great granite and iron buildings melted like glass. The fire raged all night and all the next day, eating out the business part of the city. By Sunday night the burnt district was bounded by Washington, Bedford, Summer, Broad, State, Congress and Milk streets. Seventy acres of the finest blocks in America were destroyed in fifteen hours, and the loss is estimated at $100,000,000! The fire spread in three directions, leaping from roof to roof, above the heads of the firemen. The terrible scenes of the Chicago fire were re-enacted. At 3 A. M. of the 10th whole streets of houses were blown up, to check the fire. The U. S. Marines from the Navy Yard, the citizens, and help from surrounding cities and States, did all they could to check the flames. The light of the fire was seen at Portsmouth, N. H., sixty miles distant. The dry goods, wool, leather, boot and shoe trades were destroyed. The following public buildings were burned:—The Merchants' Exchange, Trinity Church, the Transcript building, the Post building, the Mercantile Library, many of the finest blocks in the city, and a number of wharves. Twenty-one bank buildings were destroyed, and a large number of insurance offices. From seven to eight hundred great business houses were destroyed. The following streets were wholly or in part destroyed:—Federal, Leather Square, Matthews, High, Congress, Devonshire, Summer, Bussey Place, Franklin, Chauncey, Milk, Pearl, Bedford, Otis, Hawley, Washington, etc. After burning all day Sunday, the fire broke out afresh at 2.30 A. M. Monday morning, followed by terrible gas explosions, injuring firemen and soldiers and consuming some fine blocks. The fire caused great excitement throughout the country, and Chicago, New York, and many other cities held relief meetings. The extent of the damage cannot yet be fully known. The black portion of our Map shows the burned district.

MAP OF BOSTON, SHOWING THE BURNED DISTRICT, (IN BLACK).

RESULT OF THE ELECTIONS.

THE MAJORITIES FOR GEN. GRANT.

States.	Electoral Vote.	Majority.
Alabama	10	5,000
Arkansas	6	3,000
California	6	11,000
Connecticut	6	4,735
Delaware	3	1,000
Florida	4	4,000
Illinois	21	35,000
Indiana	15	22,000
Iowa	11	50,000
Kansas	5	30,000
Louisiana	8	10,000
Maine	7	28,000
Massachusetts	13	73,000
Michigan	11	50,000
Minnesota	5	25,000
Mississippi	8	30,000
Nebraska	3	10,000
Nevada	3	2,000
New-Hampshire	5	5,600
New-Jersey	9	14,000
New-York	35	50,000
North Carolina	10	10,000
Ohio	22	40,000
Oregon	3	2,000
Pennsylvania	29	130,000
Rhode Island	4	8,338
South Carolina	7	40,000
Tennessee	12	5,000
Vermont	5	30,000
Virginia	11	3,000
West Virginia	5	1,000
Wisconsin	10	25,000

States, 32; Electoral Votes, 312.

THE MAJORITIES FOR HORACE GREELEY.

States.	Electoral Votes.	Majority.
Georgia	11	10,000
Kentucky	12	10,000
Maryland	8	2,000
Missouri	15	28,000
Texas	8	20,000

States, 5; Electoral Votes, 54.

The election on the 5th of November passed off remarkably free from disturbances throughout the country. The result, as given above, is a remarkable triumph for Gen. Grant. In the matter which follows we have given such items of interest as we could collect up to the time of going to press:

Alabama.—Republican State ticket elected by a small majority. The Democrats claim a small majority in the Legislature. Senators—George Goldthwaite, a Democrat, and a Republican. Representatives—Alex. White and C. C. Sheals, Representatives at Large: B. S. Turner, Geo. T. Rapier and Charles Hays, Rep.; Wm. A. Handley, J. A. Caldwell and Joseph H. Sheets, Dem.

Arkansas.—Republican State ticket elected. Legislature, Republican. Senators—Powell Clayton and a Republican. Representatives—J. M. Bradley, Asa Hodges and D. P. Snyder, Rep.; Thos. M. Gunther, Dem. Baxter, Rep., elected Governor.

California.—Senators—Eugene Casserly and Aaron A. Sargent. Representatives—Charles Clayton, A. Frank Page, S. O. Houghton, Rep.; Mr. Luttrell, Dem.

Connecticut.—Senators—W. H. Buckingham and Orris S. Ferry. Representatives—Ex-Gov. Hawley elected from the First District.

Delaware.—Senators—Thomas F. Bayard and Ell Saulsbury. James K. Loftland, Rep., elected to Congress.

Florida.—Republican State ticket elected. Senators—Abijah Gilbert and a Republican. Representatives—Josiah T. Walls and Wm. J. Purman.

Georgia.—Senators—Thomas M. Nerwood and a Democrat. Representatives—Mr. Freeman, Rep., from the Fifth District. The remaining eight are Democrats, viz.: P. B. M. Young, H. P. Bell, A. R. Wright, Henry R. Harris, Morgan Rawls, G. J. Wright, Phillp Cook and James S. Blunt.

Illinois.—Senators, John A. Logan and a Republican. All the Chicago members of Congress are Republicans—Farrell, Ward and Rice. Burllburt and Corwin, Reps., elected from 4th and 7th districts. Morrison, Dem., from the 17th dist. The delegation to Congress is 12 Republicans to 7 Democrats. State Legislature 31 Rep. Senators to 17 Democrats; 84 Rep. Representatives to 69 Democrats. This insures the defeat of Senator Trumbull. Oglesby, Rep., elected Governor.

Indiana.—Senators, Daniel D. Pratt and a Republican. State officers elected in October. There are nine Republicans out of eleven members of the House of Representatives.

Iowa.—Senators, Geo. G. Wright and Wm. B. Allison. Rep. State ticket elected, and the following Rep. representatives to Congress:—Geo. W. McCrary, A. R. Cotton, Wm. G. Donnan, H. O. Pratt, James Wilson, Wm. Loughbridge. Sec. of State, J. T. Young; Treas., Wm. Christy; Auditor, John Russell; Register, A. Brown; Attorney Gen., M. E. Cutts.

Kansas.—Republican State ticket elected. Senators, Alex. Caldwell and a Republican. Representatives, David P. Lowe, Wm. A. Phillips and Stephen A. Cobb.

Kentucky.—Great Republican gains. Three Republican Congressmen elected—Wood in the 9th and Burns in the 10th. The seven remaining Congressmen are Democrats. Senators, J. W. Stephenson and Thos. C. McCreery.

Louisiana.—Dr. E. B. Darrall, Rep. from the 3d district, elected, and probably S. Peters, Rep., from the 4th dist. J. Rodman West, Senator, and a Democrat.

Maine.—The State officers were elected in the Fall. Senators, Hannibal Hamlin, and Lot M. Morrill. The five Representatives are Reps.

Maryland.—Each party has three Congressmen. Senators, W. T. Hamilton and George R. Dennis.

Michigan.—All the members of Congress Republican. Every county Republican. Legislature—Senate, 31 Reps., 1 Dem.; House, 90 Reps., 10 Dems. John J. Bagley elected Governor, Henry H. Holt Lieut.-Governor. Julius C Burrows for Congress from the 4th Dist. Senators, Z. Chandler and Thos. W. Ferry.

Missouri.—Woodson, Dem., elected Governor. For Congress, Parker, 9th; Stannard, 1st; Hyde, 10th; Lovy, 5th, and Honens, 6th—all Reps. In St. Louis the Republicans elected 6 out of the 17 members of the Legislature. Senators, Carl Schurz, and a Republican.

Massachusetts.—The Republican State ticket elected. Gen. Banks defeated for Congress by some 3,000 majority. Senators, Charles Sumner, and a Republican. All the Massachusetts Representatives are Republicans, as follows:—Jas. Bullington, Benj. W. Harris, Wm. Whiting, Sam. Hooper, Dan. W. Gooch, Benj. F. Butler, E. Rockwood Hoar, J. M. S. Williams, Geo. F. Hoar, Alva Crocker, Henry L. Dawes.

Mississippi.—Lynch, Rep., from the 6th Dist., elected.

Minnesota.—W. S. H. Dunnell, J. T. Averill and Maj. B. H. Start, Republicans, elected to Congress.

Nebraska.—State elections took place in Oct. The last vote was the highest.

New Jersey.—The State Senate stands 14 Republicans to 7 Democrats; the Assembly 43 Republicans to 17 Democrats.

New Hampshire.—State elections in October.

New York.—The following State officers were elected:—Governor, John A. Dix; Lieut.-Governor, John C. Robinson; Canal Commissioner, Reuben W. Stroud; Prison Inspector, Ezra Graves; Congress at Large, Lyman Tremain. The following Congressmen were elected:—1st, Henry W. Scudder; 2d, J. G. Schumaker; 3d, Stewart L. Woodford; 4th, Stephen J. Colahan; 5th, Wm. R. Roberts; 6th, James Brooks; 7th, Thomas J. Creamer; 8th, John D. Lawson; 9th, Michael Connolly; 10th, Fernando Wood; 11th, Clarkson N. Potter; 12th, Charles St. John; 13th, John H. Ketchum; 14th, David M. Dewitt; 15th, Eli Perry; 16th, James S. Smart; 17th, Robert S. Hale; 18th, William A. Wheeler; 19th, Henry H. Hathorn; 20th, David Wilbur; 21st, Clinton L. Merriam; 22d, Ellis H. Roberts; 23d, Wm. E. Lansing; 24th, R. Holland Duell; 25th, Clinton D. MacDougall; 26th, Wm. H. Lamport; 27th, Thos. C. Platt; 28th, H. Boardman Smith; 29th, Freeman Clarke; 30th, Geo. G. Hoskins; 31st, Lyman K. Bass; 32d, Walter L. Sessions. The Republicans have 22 Congressmen out of 32. In the city of New York Grant received 54,599 votes, and Greeley 77,497. In Kings Co., (Brooklyn,) the vote stood:—Grant, 32,091; Greeley, 37,272. Greeley ran ahead of Kernan, the Democratic candidate for Governor, in New York city. The Assembly will stand 92 Republicans to 36 Democrats. In New York city Mr. Havemeyer, the Republican candidate for Mayor, was elected by a majority of 5,558. All the Republican Judiciary ticket was elected. Gen. John A. Dix was elected Governor by some 40,000 majority. The Republicans gained a Congressman in the Ninth (New York city) District—David H. Mellish.

North Carolina.—State officers elected in the Fall.

Ohio.—State officers elected in October. Grant gained over the Fall elections.

Oregon.—Representative, Joseph G. Wilson.

Ohio.—There were uniform gains for Grant over the October election. Hamilton Co., gave Greeley a majority of 4,500. Senators A. G. Thurman and John Sherman. Twelve of the Representatives out of 19, for Congress, are Republicans.

Pennsylvania.—The city of Philadelphia gave Grant a majority of 45,446. Many Democrats are said to have refrained from voting. Senators, John Scott, and a Republican to be elected. There are 22 Republican Representatives to Congress out of 27.

Rhode Island.—Greeley had 5,305 votes in this State. The two Republican Congressmen, Eames and Pendleton, were elected.

South Carlolina.—Grant had a large majority in Charleston city. The white vote was light. T. J. Robertson, Senator, with a Republican to be chosen.

Tennessee.—Andrew Johnson was defeated for Congressman at Large, and Maynard, the regular Republican candidate was chosen. Only two Democrats were chosen out of the ten Representatives to Congress. Senators, W. G. Brownlow and Henry Cooper.

Texas.—The polls were open three days. No definite returns yet at hand, Houston was chosen for the State Capital, and the Liberals are believed to have carried the State.

Vermont.—State officers elected in October. Three Republican Representatives were elected to Congress, viz:—Messrs. Willard, Poland and Bender.

West Virginia.—This State has two Democratic Representatives and one Democratic Senator.

Wisconsin.—Six Republican Representatives and two Democratic. The re-election of Senator Howe is insured. Owing to the weather there was a falling off in the vote.

SEMI-BUSINESS PARAGRAPHS.

Now that the Presidential Campaign is over, and the wintry season of many accidents is close at hand, the Travelers Insurance Company of Hartford, Conn., offers to insure men of all parties against death or injury by accident, or to grant full life insurance on terms very favorable to the insurer. The Company is a standard one, has ample assets, and is managed with ability and integrity.

Economy should be practiced in all purchases these hard times, and there is no need of paying seventy-five or eighty dollars for a sewing machine when the Perfect Wilson can be bought for fifty. The New Wilson Under-Feed Sewing Machine has not an equal in existence for capacity, simplicity, durability and perfect workmanship. It is made of the very finest and best material, and combines every valuable principle known to sewing machine science. Call and see it. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

Facts for the Ladies.—Miss ELLEN CORBETT, Brooklyn, New York, has used her Wheeler & Wilson Lock-Stitch Machine since 1858, doing the entire sewing for thirteen adults; it is as easily used as a hand needle. A No. 2 needle did all the sewing for ten years; it has paid for itself many times over, and they would not go back to hand-sewing for ten times its cost. See the new Improvements and Woods' Lock-Stitch Ripper.

Watch No. 1007, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by the United States Watch Co. (Giles, Wales & Co.), has been carried by me some months; its total variation from mean time being only eight seconds per month. —WM. MITCHELL, Conductor P. & K. R. R.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Nov. 11, 1872.

THE Boston calamity was known in this city yesterday (Sunday), and the effect upon the Wall street markets this morning, though not of a very panic nature, was seriously felt on stocks. The early decline was from 5 to 7 per cent. on most of the railroads, and 5 per cent on Pacific Mail and Western Telegraph. The stocks of the United States were not materially influenced, as it is understood the Secretary of the Treasury is prepared to buy largely for the Sinking Fund, even though he should again draw upon his $44,000,000 reserve of Greenbacks, as he did to a partial extent in October.

In the Money market the feeling is less depressed than the extent of the calamity, and its losses to the underwriters everywhere, might have been looked for. The City Banks and private Money lenders, cooperating with the Treasury, show a commendable degree of forbearance, and the Banks are not expected in such an unexpected crisis to pay much regard to their reserves of lawful Money. The National Banking Laws, in providing for reserves to the extent of 15@20 per cent. in the country, and 25 per cent. in the city, were, no doubt, framed for just such emergencies as the present, and the Currency Bureau at Washington, under control of the Secretary of the Treasury, will be prepared to indemnify any infringement of the standard of reserve.

It is too early to speak of the effect upon the general trade of the country. A rise in Gold on Saturday, co-incident with a stronger money market in London, and the rise of the Bank of England rate of interest to 7 per cent. will at least help the exports of Domestic Produce, while the season is one of unusual quiet in the Dry Goods trade. Sight exchange on London has gone up to 110½ per cent., which will carry out gold coin in case the demand for remittances should be large this week, which is doubtful under the other surroundings of the money market here.

The following are the comparative movements of the City Banks for the past fortnight:

	Nov. 2.	Nov. 9.
Capital	$88,019,200	$88,019,200
Loans	277,832,300	270,251,500
Gold and Greenbacks	65,525,100	61,685,200
Deposits	235,205,100	203,405,600
Circulation	27,686,000	27,685,100

PRICES OF GOLD, STOCKS AND BONDS.

American Gold	114	Erie	49

At the hour of closing our report there is a steadier confidence on the Stock Exchange.

PRODUCE AND PROVISIONS.

NEW YORK, Monday Nov. 11, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	421,000	Meal, bbls	4,890
Oats, "	218,200	Flour, "	93,200
Wheat, "	102,000	Eggs, "	7,450
Rye, "	—	Cotton, bales	32,300
Barley, "	219,000	Hops, "	829
Malt, "	13,800	Wool "	412
Seed, "	300	Butter, pkgs	21,200
Beans, "	3,380	Cheese "	32,850
Meal, bags	902	Lard, "	5,030
Peanuts "	1,130	Dried fruits, pkgs	1,919
Pork, bbls	183	Cut Meats "	2,280

Beans and Peas.—The stocks of both mediums and marrowfats have got very low, through a steady, fair call from the jobbing trade, and unusually light receipts for the season, and prices have been steadily advancing, the markets closing very strong. Peas are neglected.

We quote Mediums, prime $2.75@2.85 per bushel; good do., $2.50@2.60; fair do., $2.35@2.50; prime marrowfats, $2.90@3.00; good do., $2.60@2.70; common and fair do., $2.25@2.50 Green peas at $1.75@1.85. Southern black-eyed peas, $2.80.

Beeswax.—There is not much trade, and receivers are inclined to force supplies on the market. Sales at 33½@34c. for Western and Southern, the latter an exceptional price for choice lots.

Butter.—Receipts of butter are large, and the mixed condition of qualities rather perplexes trade. All of last month we were in steady receipt of fine delicious stock, so that buyers could hardly miss finding a straight line of choice. Buyers soon get used to such favor, and are still looking for the same abundance. As it is not to be had so regularly there is some lull in the good demand that has ruled, and with stock piling up in the cellars there is a weak tone for all grades under fancy. Pails have dropped a few cents, as their quality now will not warrant best prices, and the fancy half tubs that have been withheld are fully as firm as before, as the best grocers are now working upon them. About 80 firkins common have gone abroad, including some for Germany.

Orange Co. pails, fine, 34@38c.; Penn. and N. J. pails, good to fine, 26@33c.; common, 15@18c.; selections, half tubs, 33@35c.; half tubs in lots, 28@30c.; good to prime firkins, 27@29c.; do. Welsh, Fall, 27@28c.; Welsh tubs, fair, 20@23c.; other grades of State, 18@22c.; Western Reserve, choice, 21@22c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.; State dairies, tubs are 29@32c.; do. all firkins, 28@30c.

Cheese.—The market is somewhat depressed. Dealers here are carrying rather more stock than they desire, as the shipping demand does not prove as liberal as expected, with the fact that large stocks have been held back in the interior with the expectation of a better market. With the comparatively stagnant condition of the trade there is some disposition to shade prices to relieve the market. Country dealers name a fraction under late figures, but thus far have been unsuccessful in infusing life to the market. For large lines here a trifle under late figures are current. The home trade have been buying mainly at 11½c. for cheese factory, with an occasional lot placed at 12c.

We quote State factory, choice, 11½@11¾c.; good to prime, 13½@11c.; fair, 12½@13¼c.; State dairy, 13@13¼ for good to prime, 12@13c. for fair lots; for Ohio factory, 13½@13¾c. for good to prime; English dairy, prime, 13½@14c.; fair do., 11½@13c.

Cotton—is full ⅛c. lower under large arrivals, and a moderate export demand, closing weak.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16¼	16¾	16⅝	16¾
Good Ordinary	18¾	18¾	18¾	18¾
Strict Good do	18 7-16	18¾	18¾	19⅛
Low Middling	18⅝	18¾	19⅛	19⅜
Middling	19¼	19¾	19⅝	19⅞
Good Middling	20⅛	20⅜	20⅝	21

For forward delivery sales on the basis of low middling are as follows:—Nov., 18⅛c.; Jan., 18 7-16c.; Feb., 18⅜c.; March, 18 13-16c.; April, 19 1-16c.

Dried Fruits.—Peeled peaches are about 2c. lower, the decline mainly on North Carolina stocks, the prices of which had been run up relatively higher early in the season. The supplies are fair and trade slow. The shipping demand for apples has fallen off. Small sales of best qualities are making at inside prices. Other fruits are selling slowly, without important changes in prices.

Southern apples, 3½@5c.; do. sliced, 7@9c. Peeled peaches at 14@17c. for Ga., 14@16c. for Va., and 16@20c. for North Carolina. Unpeeled peaches at 5½c. for quarters, and 6c. for halves. Cherries, 22@22½c. Plums, 14@19c. Blackberries, 9@9½c.

Flour.—Supplies have been large, and as the business from shippers has been light, stocks have accumulated materially and prices are lower.

Fresh Fruits.—Exports of apples for past week, 6,700 bbls. The continued foreign demand for apples recently helps the market. We have never before known such free shipment to Europe. Grapes are dull; the demand is limited to smallest boxes. Quinces are selling with prices favoring the buyer. Pears are quotable for fancy, well-kept lots, these of course are higher. A car load of California has sold at $5 per box. Cranberries do not move briskly, but are no lower. New peanuts are scarce. Old have declined to 90c.@$1.10 for Wilmington; $1.20@1.40 for Virginia. New Virginia, $1.45@1.75.

We quote—Apples, prime, $2.75@3.00; mixed, $2.12@2.37; fair, $1.25@1.75; common, $1. Pears.—Duchess, fancy, per bbl., $15@20; do. ordinary $10@16; other fine pears, $15@20; common cooking, $4@7. Grapes.—Isabella, 6@7c.; Catawba, 7@8c. Cranberries, per crate, fine, $3.25@3.37; other, $2.25@2.75; bbls., $11.50@12 for Cape and $9@11 for N. J. Chestnuts, per bush., $3.50@3.75. Hickory nuts, $2@2.25.

The supply of Western apples will depend largely upon railroad transportation this year. We are very far behind in canal receipts this season and there are but few weeks remaining to that movement. Distemper among the horses along the line of canal has seriously interrupted the forwarding of late supplies.

Grain.—All grades of wheat are lower, with better supplies and a tight export inquiry. We quote at $1.45@1.51½ for No. 2 Spring, afloat, $1.47@1.53 for No. 1, do.; $1.58@1.65 for Winter red Western; $1.66@1.70 for amber; $1.72@2.05 for white. New Western rye is selling at 85c. Barley is depressed and nominal. Corn is 1c. lower, with a limited trade. Sales at 63½@64c. for steamer lots of Western mixed; 64½@65c. for sailing do.; 66c. for yellow. Oats are in small receipt, and prices are steady. Sales at 38@42½c. for Black Western; 42@43½c. for new mixed do.; 41@47c. for State.

Hay and Straw.—There is not much trade in hay and no change in prices. Straw is wanted at full former figures. We quote new shipping hay at 95c.@$1.; retail do., $1.20@1.50; salt, do., 55@80c.; clover, 75@80c. Straw at $1@1.05 for long rye, 75@85c. for short rye; 70@75c. for oat.

Hops.—The market is again up in the interior, so far as the views of growers are concerned, the marked advance obtained here recently giving holders in the interior even more confidence in their ability to put prices up to something like last year's figures. In some sections they are holding stock fully 10c. above the market figures here, and in most localities refuse to sell at a price that will insure a profit to buyers, with the current quotations at marketable points.

New York, growth 1872, at 30@35c.; Eastern do., 30@35c.; Western do., 30@35c.; Yearlings '71 20@25c.; Olds '70 10@15c.; Old Olds, '68-69 8@10c.; Bavarians, 30@35c.; English, 25@30c.

Poultry and Game.—For dressed poultry the market is moderately well supplied, with prices steadily held.

We quote dressed poultry:—Chickens, Jersey and Bucks county, prime, 18@20c.; do. fair to good, 16@18c.; do. State, prime, ₩ lb., 16c.; do. fair to good, 14@15c.; do. Western, prime, 15@16.; do. poor to good, 12@14c. Ducks, Jersey, prime, 21@22c.; do. fair to good, 17@18c.; do. State, prime, 20@21c.; do. fair to good, 17@19c. Turkeys, State, prime, 20.; do. fair to good, 17@19c.; Western, good to prime, 18@19c.; do. fair to good, 15@16c. Geese, Jersey, prime, 17@19c.; do. fair to good, 15@16c.; do. State, prime, 17c.; do. fair to good, 15@16c. Live Poultry:—Chickens, Jersey, ₩ lb., 14@15c.; do. Western, 13@14c.; roosters, 9c. Turkeys, N. J., 16@17c.; do. Western, 15c. Ducks, N. J., ₩ pair, 75c.@$1; do. Western, 62@75c. Geese, N. J., young, per pair, $2.25@2.50; do. Western, $1.75@2. Venison, whole deer, per lb., 15@16c.; saddles 20@22c.; canvas back ducks, $2@2.25 per pair; mallard and teal do., 40@50c.; woodcock do., 75@87c.; partridges, state, 87@$1.12; do. eastern, 62@75c.; quail per doz., $2.75@3; prime hens per pair, 95@$1.06; rabbits, 30@40c.; hares do., 60@75c.

Provisions.—The steady effort to work mess pork up to $16 has been successful, and very free sales for use have been made at $15@15.12. New pork for Dec., at 11.50. Beef begins to be inquired for, but quotations for new crop are unsettled. New prime mess, tcs., $21@22; do. India, $23.50@24.50. Old is not regular in price. Beef hams salable at $31 for weather cured, which is higher. Cutmeats have a good store demand at the prices. Smoked hams 15@16½c., smoked shoulders 7½@7¾c., pickled hams 13½@14¾c., pickled shoulders 6¾@7c. Boxed bellies 8½@8¾c., bellies loose 8c. Bacon is firm, and spot or early delivery long clear is well brought up. Long clear, cash, quoted 8¾c. For forward delivery there is a good demand, at 7¾@7¾c. for long and short together for Jan., and 8 1-16c. for short clear for Jan. Lard has received a good push from the export buyers, and prices for prime Western steam are quoted firm at 8¾@8¾c. Tallow is firm at 8¾c. Dressed hogs have ruled steady at 6¾@7¾c. for packing sizes, and 7¾@8c for pigs. Tallow is firm at 9¼@9⅝c. for good to choice. Stearine, 9c. hhds., and 9½c. tcs. spot.

Seeds.—The first sale of new clover was made at 9¾c. for Indiana. Old Timothy is selling at $3.25@3.50. Clover at 9½@9¾c. for Indiana and Michigan, and 10¼c. for State. Rough flax is dull, quoted at $1.90@2.

Sundries.—Honey is active at firm figures: 28@30c. for dark and 32@33c. for white, in glass boxes; mixed lots, 21c. Cider at 6@10c. per gallon. Feathers, live geese, new, fine, per lb., 60@70c.; do. mixed, 40@50c.; hen, 7@8c.; vinegar, cider, ₩ gal., 20@25c.; do. manufactured, 15@20c.; newspapers, ₩ lb., 4@4½c.; white rags, 5@5½c.

Tobacco.—There has been a good trade in Kentucky leaf for export at full late prices. Other descriptions have been selling slowly.

Whisky—is higher under small supplies. Western 96½c.

Wool.—The market all through last week was active under liberal sales to manufacturers, and as the stocks were not replenished to any extent prices advanced. Holders offered their supplies sparingly, with the impression that very little addition could be expected to the stock unless at a marked advance in the prices. At the close the business is entirely demoralized, through the conflagration in Boston. Heavy stocks were stored there, which, in connection with the large amount of goods destroyed, leads the trade here to expect a drain upon their supplies that will necessarily create an excited range of prices. We omit quotations for the present.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Nov. 9, 1872.

THE market at Little Falls for the week ending Nov. 9, was very dull, with scarcely any transactions in Factories. The delivery of farm dairies at railroad and canal amounted to about 400 boxes, and sales were made at 13¾@13¾c., a few extra lot bringing 14c.

Factory offerings were very light, and less than a half dozen sales were made. We quote the following:

Herkimer Co. Central..11¾ Danube Cold Spring...11¾
Hill.....11¾ Little Falls Central....11¾

The prevailing horse epidemic, and the occurrence of the Presidential election this week, have both had an influence on the market, buyers preferring to let the goods remain at the factories rather than handle them in the city.

Butter comes in more plentifully, and sales this week have been made at 30@31c.

The weather during the early part of the week was mild and pleasant, and cows are yielding a good quantity of milk for the season.

LIVE STOCK MARKETS.

NEW YORK, Nov. 9, 1872.

ALL kinds of stock have arrived in larger quantities, while increased receipts of poultry and game turn the trade more in that direction. Cattle have declined ¼@½c., but everything has been sold. The arrivals of Texans were large, and generally of an improved quality. Prime natives were not plenty. Sheep are in good demand, with wide extremes of quality. The same is true of lambs, some of the rejected lots now sent to market being very poor. Hogs gain strength with the cool weather, which increases the demand. Many are being sent in from the surrounding country. They sell ½@1c. above the prices of Western.

RECEIPTS OF LIVE STOCK

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,089	81	1,600	21,927	41,670
" last week	7,663	60	1,655	20,862	31,481
Average last year	7,187	88	2,301	25,132	25,477

Beeves.—The increased receipts, with unfavorable weather during a part of the week, tend to depress the prices, but all have been sold. The feeling is better at the close, and Texans which sold for 7¾c. a few days ago are now worth 8c. There were 2,591 head of these long horns during the week. A notable feature in connection with them is the employment of two Mexicans by one of the largest wholesale butchers, for the purpose of driving his wild cattle to the slaughter house. These Indian cattle are only accustomed to men on horseback in their native country, and they have been taught, with whip and lasso, to fear and obey their masters. Not so when our unmounted driver boys attempt to conduct them through the streets. They scatter in all directions, jump into the river for a bath, toss an unlucky pedestrian into the air, and often have to be brought down with a bullet. The skill with which these experienced Mexicans throw the lasso from their mustang ponies, and the trained eye of the latter, alive to every move of his captured foe, are truly surprising; and after a few captures—sometimes by the horns, sometimes by the hind legs, and at other times by the tails, during which the riders manage to throw the unruly brutes—they quietly submit to be driven at will. A few of the latest sales of cattle were 7 cars just fair 5¼ cwt. Texans at 8¼@8¾c., 55 lbs. per cwt.; 3 cars common Illinois, 6¼ cwt., at 11c.; 6 cars fat Ohio, 8½ cwt., at 12½@13½c., and 23 cars Texans, 5½ cwt., at 7¾@8¼c.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₩ lb	13 @ 13¾	13¾ @ 14
Good to prime	12 @ 12¾	12 @ 13
Medium	10¾ @ 11¾	11 @ 11¾
Poorest grade	7¾ @ 9¾	8 @ 10
Average sales	10¾ @ 11	11 @ —

Milch Cows.—There is a fair demand for good milkers, and prices are fully sustained. Common cows rule dull, with very little demand. Quotations are $35 to $85 for poor to extra.

Calves.—Fat milk veals are scarce and higher. The finest Bucks Co. have been sold at 11½c. by the car load. Grass calves are also doing better, 28 selling at $11 each, and 22 at $8. Dressed calves are increasing in numbers, as the transportation is cheaper than for live calves. They sell at 8@10c. for grass and half-fed, and 12@13c. for milk veals. Quotations are 8@9½c. for half-fed to thin milk veals and 10¾@11½c. for fair to prime, three cars Bucks Co. selling at 11@11¾c.

Sheep and Lambs.—With larger receipts there is a good demand for fat stock at the full rates of last week, but the cool weather is sending in some of the offscourings, worth little at home, and still less here. We saw some little runts of State lambs, weighing 35 lbs., sold at 5¾c., or about $2 each. Fair lambs are worth 8@8½c., with prime stock at 9c., a whole car load Canadas, 80 lbs., selling at that price. Sheep take the range of 4¾@5¼c. for quite poor; 5¾@6½c. for fair to good, and 7c. for choice, a few of 130 and 140 pounds very extra going at 7¼c. The average of 9,162 sheep and lambs sold last week was $5.15 per head.

Hogs.—There is an improved tone to the hog market, and it is hinted that dealers are going to have the horse disease or some other malady to attack the hogs so as to check the consumption and reduce the prices to a point at which they can profitably make contracts. Live are now worth 5¾@5¾c., and dressed 7¾@7¾c. for heavy to medium, and 7¾@7¾c. for light and market pigs, small Jersey and State selling at 8¼@8¾c.

LATEST.—Monday, November 11, 4 P. M.—Beeves.—Fresh receipts, 128 cars at Communipaw, 81 at 100th St., and 42 at Weehawken, making 4,081 head on sale. This unexpectedly light run suddenly advanced the rates ¼@½c. per lb. Prime cattle sold at 13½@13¾c., while such Texans as have been selling at 8¼c. were put out at 9c., with a full estimate of weights. The close was very firm, and all the stock sold early.

Sheep and Lambs.—Receipts to-day, 21 cars at 40th St., 22 at 48th St., and 4 at Communipaw, making 9,109 on sale. The firmness of Saturday continues, but there is no special advance in prices, 80 lb. Western sheep selling at 5¾@6c., and 75 lb. Canada lambs at 8½c.

Hogs.—Fresh arrivals, 83 cars at Communipaw, and 125 at 40th St., making 20,936 on sale. This is a very large supply for one day, and the market is rather weak in consequence, live selling at 5¾@5¾c., and city dressed Western at 6¾@7¾c. as extremes.

SPECIAL NOTICES.

A Positive Radical Cure for Rupture.—The Elastic Truss Company, at No. 683 Broadway, New York, will send their Descriptive Circulars to any person afflicted with Hernia. This Truss can be sent by mail to any part of the country.

New Advertisements.

AN UNUSUAL OPPORTUNITY TO purchase a first-class Farm. 182½ acres, under splendid cultivation (having 4 miles of tile drain and 2 miles of board fence), 12 acres of the choicest apples, 30 acres of meadow, and 22 acres in wheat. Fair farm house, with cellar, tenant house, barn, corn-house, hog pens and all necessary outbuildings, which, with the fences, are in good repair. *Only* ¼ mile from the Station of the L. S. & M. S. R. R. Trains passing almost hourly. On a main parallel road from Toledo, but 6 miles distant. *In five years* Toledo will rival Cleveland in population, and Chicago for business in 10 years. She has now *Seventeen Railroads* in operation and in the process of construction. Farm is not 6 miles from land that is selling at $1,000 per acre. Toledo is commanding more attention than any other Western city. Price $20,000; terms easy. Address GEO. E. POMEROY & SON, Real Estate Agents, Toledo, Ohio.

FOR SALE.—A VALUABLE DAIRY Farm, containing 200 acres, about one-half improved, the balance well timbered—20 acres of chestnut timber—with good buildings. Situated 1½ miles from the Rochester and State Line R. R., and 4 miles from the N. Y. and Erie. Also, adjoining, 268 acres, with good buildings, steam mill, about 75 acres improved, balance well timbered, with hemlock enough to pay for the farm. Price low, and terms easy. Well watered with spring and trout brooks; first-rate chance for trout pond. For particulars, address E. DODGE, Great Valley, Catt. Co., N. Y.

The New Book, by REV. HOLLIS READ, author of "*God in History*," and late Missionary to India, illustrated from designs by Dore and Nast of Harper's Weekly; sells, because nothing like it was ever before seen or heard of. Do good and get big pay. Agents wanted. E. B. TREAT, Publisher, 805 Broadway, N. Y.

THE INDIANA AND ILLINOIS CENTRAL Railway Company's FIRST MORTGAGE 7 PER CENT. GOLD BONDS.

$3,500,000.

This is an EAST AND WEST ROAD, RUNNING ON THE 40TH PARALLEL, FROM INDIANAPOLIS, IND., TO DECATUR, ILL., 152 miles; through the richest agricultural and mineral country of both States; and connecting at termini with the GREAT TIROUGH ROUTES to the East and West.

It is the only East and West road in a belt averaging 30 miles wide, and passes through the best part of the rich

BLOCK COAL FIELD

of Indiana, in which the COMPANY OWNS 2,000 ACRES OF BLOCK COAL LANDS. It owns, also, 30,000 acres of Farming lands.

$1,400,000 IN CASH HAS BEEN ALREADY EXPENDED ON THIS ROAD, of which 30 miles in Illinois are finished and in operation. Fifty-five miles more, completing the Western Division, Decatur to the Coal Fields, will be completed this Fall, and the whole road in 1873.

Upwards of TWO MILLIONS OF DOLLARS more are pledged to the enterprise, partly by counties, towns and individuals along the line, but chiefly by wealthy capitalists, among whom are W. H. GUION (of WILLIAMS & GUION), SIDNEY DILLON, JAY COOKE & CO., CLARK, DODGE & CO., J. & W. SELIGMAN, VIBBARD, FOOTE & CO., and PAUL S. FORBES of New York, BENJ. E. BATES of Boston, HENRY LEWIS of Philadelphia, and GEO. M. PULLMAN of Chicago.

Bonds $1,000 each, payable in 30 years, principal and interest in *Gold, free of Government Tax.* Sinking Fund 2½ per cent. on Gross Earnings.

For sale at 90 and accrued interest by the Financial Agents of the Company (of whom pamphlets and information may be obtained).

THE YOUTH'S COMPANION
A WEEKLY PAPER FOR
YOUNG PEOPLE AND THE FAMILY

THE COMPANION aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible; and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated, and has for contributors some of the most attractive writers in the country. Among these are:

Prof. James De Mille,	Louise C. Moulton,
Louisa M. Alcott,	"Saphie May,"
Grace Greenwood,	C. A. Stephens,
Rebecca H. Davis,	Ruth Chesterfield,
C. W. Flanders,	M. A. Denison,
S. S. Robbins,	Prof. H. Lincoln.

Its reading is adapted to the old and young, is very varied in its character, sprightly and entertaining. It gives

Stories of Adventure,	Stories of Home and
Letters of Travel,	School Life,
Editorials upon Current Topics,	Tales, Poetry,
Historical Articles,	Selections for Declamation,
Biographical Sketches,	Anecdotes, Puzzles,
Religious Articles,	Facts and Incidents.

Subscription Price, $1.50. Specimen copies sent free. Address
PERRY MASON & CO.,
41 Temple Place, Boston, Mass.

"THE CHRISTIAN GRACES." FAITH, HOPE, CHARITY.

"And now abideth Faith, Hope and Charity; these three, but the greatest of these is Charity."

It is a long time since anything has appeared in Christian art so lovely and so exquisite in design and execution as this elegant steel engraving "THE CHRISTIAN GRACES." The grouping of the figures is graceful beyond conception, and the faces of such rare and heavenly beauty, that it seems as if the artist must have seen them in a vision. Every subscriber to "ARTHUR'S HOME MAGAZINE" for 1873 will receive a copy of this splendid $5 picture FREE. Price of Home Magazine, $2.50 a year. Specimen copy of Magazine 15 cents.

LOCAL AGENTS WANTED everywhere to get subscribers for our beautiful Magazine, so well known for the last twenty-five years, and so great a favorite with the people. Intelligent men and women can make large commissions. Send for agents' confidential circular. You can hardly show "The Christian Graces," to any person of taste and fine religious feelings, without getting a subscriber. No disappointment about prompt delivery of pictures, as we have made ample arrangements for their rapid production. T. S. ARTHUR & SON,
809 & 811 Chestnut St., Philadelphia, Pa.

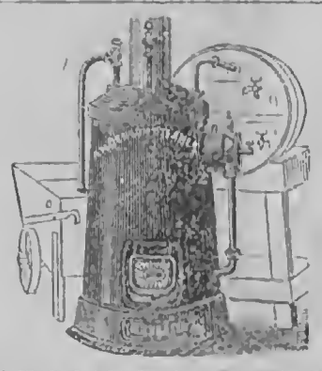
BARROWS, SAVERY & CO., Manufacturers,
PHILADELPHIA.
OFFICE, No. 28 Cliff St., New York.
JAMES C. HAND & CO., Factors,
614 & 616 Market St., Philadelphia.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats, Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler—No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing

Anderson's Low Pressure Steam Heater,

for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

For further particulars, address
P. P. MAST & CO., Springfield, Ohio.

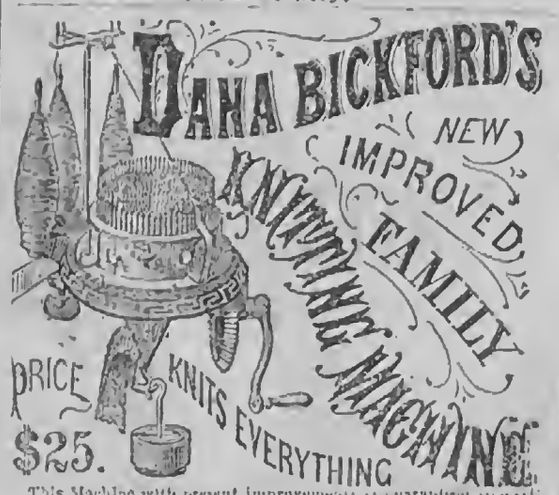
Collins Metal Watches and Jewelry.

This cut represents the appearance of one of our $25 Watches and $12 Chains, only reduced in size—the watches being the full sizes for Gents, Ladies and Boys; also, this style Vest Chain, full size and beautiful, $12. These watches, for accuracy of time and in appearance, are fully equal to Gold watches that cost $250. Some of our watches that have been used on Railroads have not varied *one minute* in six months. We manufacture three qualities and three sizes—prices, $15, $20 and $25—all Patent Levers. Full Jeweled, in Hunting Cases, Gents', Ladies' and Boys' sizes. Chains, $2 to $13, according to weight and finish. Every watch is fully guaranteed by a special certificate. When six watches are ordered at one time, we send a *seventh one free.* All kinds of Jewelry of the same elegant Collins Metal. Goods sent by express, to be paid for on delivery; or, if Post-Office Orders be sent, they will be sent registered and free by mail. Send a stamp for our Illustrated Circular. The Genuine Collins Watches can only be had of us; we have no Agents. The goods of C. E. Collins & Co. have invariably given satisfaction. *N. Y. Times.* One of the $20 watches is worn in our office, and we have no hesitation in recommending them.—*Pomeroy's Democrat.* Address COLLINS METAL WATCH FACTORY, 335 Broadway, N. Y. City.



This Machine with recent improvements is guaranteed to make every want of the household, for either plain or fancy work. It knits all sizes of Stockings and Socks, with heel and toe complete, and is a never ending source of amusement to ladies of leisure, as well as profit and easy support to those that require it.

Agents wanted every where by the BICKFORD KNITTING MACHINE COMPANY. DANA BICKFORD, President and General Business Supt., 689 Broadway, New York.

CARHART'S PULVERIZING CULTIVATOR has more practical points than any cultivator in use, and is indispensable as a farm implement. Price, $22. C. C. BRADLEY & SON, Manufacturers, Syracuse, N. Y.

Goux Absorbent Closet & Urinal.

SANITARY—CONVENIENT—PROFITABLE

to Public Institutions, Schools, Manufactories, Farmers, Gardeners and others.

The Goux Fertilizing & Sanitary Co.

offer, by the use of their Patent Absorbent Closets and Urinals, a method of collecting, deodorizing and utilizing in man excreta, at once convenient, inoffensive and economical.

The liquid is separated from the solid excrement by absorption, all the valuable properties of each are retained, and the product is an invaluable manure.

For explanation and practical exhibition of the system, call at Office and Warerooms of Company, corner of Varick, Vestry and Canal Sts., New York.

THE CAMPAIGN OVER.

NOW THEN TO BUSINESS.

THE TRAVELERS INSURANCE COMPANY, of Hartford, Conn., offers peculiar inducements to persons desiring Life Insurance, in its low rates of premium, its liberal and definite contract, its sensible all-cash plan, its freedom from complication and mystery, its cash assets of $155 to every $100 of liability, and its economy and careful management.

THE TRAVELERS INSURANCE COMPANY, of Hartford, Conn., calls the attention of business men, professional men, and men of all trades and occupations (between the ages of 18 and 65), to the fact that it is the only Company in America writing yearly or monthly policies of insurance against general accidents—that such policies grant a fixed sum ($500 to $10,000) in case of death by accident, or a weekly indemnity ($3 to $50) for loss of time caused by non-fatal accident—that the cost of such a policy is but $5 to $10 a year for each $1,000 insured, for men not engaged in hazardous occupations.

NOVEMBER INVESTMENTS.

To those who have funds to invest in large or small amounts, or who wish to increase their income from means already invested in other less profitable securities, we recommend, after full investigation, the Seven-Thirty Gold Bonds of the Northern Pacific Railroad Company. Bearing seven and three-tenths per cent. gold interest (equal now to 8¼ currency), and sold at par, they yield an income considerably more than one-third greater than United States 5-20s. They are Coupon and Registered, the lowest denominations being $100, the highest $10,000.

Nearly one-third of the main line of the Road will be completed and in operation with a large business the present season. All the property and rights of the Company, including a most valuable Land Grant, averaging about 23,000 acres per mile of road, are pledged as security for first mortgage bonds now offered.

All marketable stocks and bonds are received in exchange at current prices. Descriptive pamphlets and maps showing route of Road, connections, tributary country, &c., will be furnished on application.

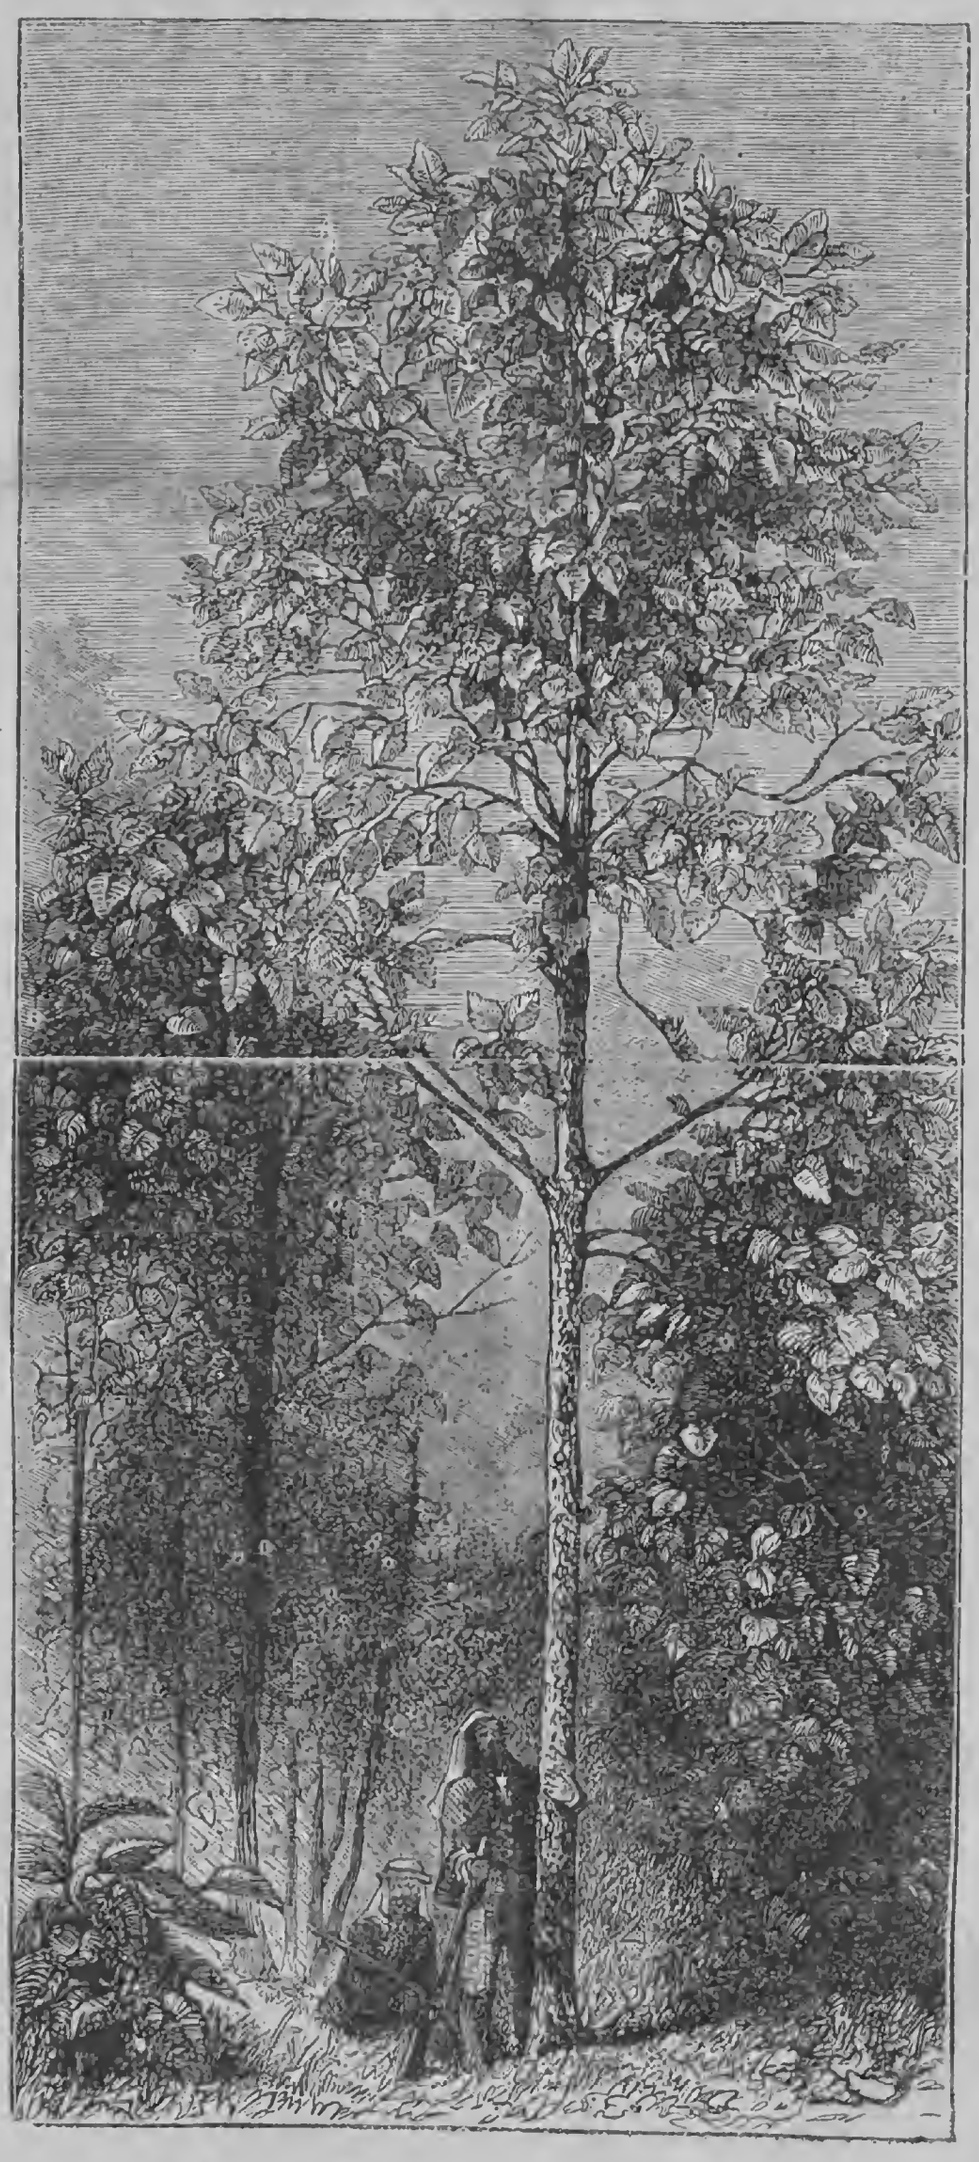
CINCHONA PLANTATIONS AT DARJEELING.

WE copy the following excellent article from an English paper:—It has often been asserted that there is evidence of benevolent design in the distribution of natural productions, and that the maladies incidental to any given region are most effectively dealt with by the use of those remedies which the country itself affords. We are by no means inclined to dispute this as a general rule, but the trees of the cinchona family furnish a notable exception. They are indigenous only in certain parts of South America, while the malarious fevers which their alkaloids alone can conquer are not by any means confined to those districts, or even to that continent. The terrible scourge was at one time very general in our own country, and it lingered until recently among the fens of our Eastern counties, gradually retiring as improvements were made in the drainage and cultivation of the soil. But in India, where there are vast tracts of country subject to frequent inundations, and in a stage of cultivation which as yet has scarcely changed them from their natural condition of jungle, but which has brought to them a population which the mere jungle could never have sustained, the forms of fever incidental to defective land drainage are still met with in great severity.

Some idea of their fearful ravages may be gathered from an official report of the recent sufferings of the inhabitants of Burdwan, about 100 miles north-west of Calcutta. Whole villages were depopulated, and in the town itself almost every human being was more or less affected by fever. On one occasion the magistrate received a letter from every official subordinate, claiming to be put upon the sick list, and in the gaol the fever-stricken warders were tended by the prisoners whom they were supposed to have in charge. Prompt and liberal measures were taken for the relief of the sufferers. Dispensaries were established under native doctors and European supervision, and food, clothing, and blankets were distributed to those who were unable to work. During the month of April alone, although the fever was then subsiding, 114,042 persons sought relief at the district dispensaries, and the Government of Bengal, anticipating a fresh outbreak as the season advances, has supplied six elephants for the use of the medical supervisors, besides a large store of quinine. What is here recorded of Burdwan is but a sample of what is going on in other districts. The curse of India is fever; wherever you look over the broad face of the country, there is not a territory unvisited by the deadly malady. It is no less at home in the populous city than in the thick jungle. We have made canals, and their course is immediately marked by fever, enlarged spleen, and various diseases.

[Our readers will observe that India is not particularly different to our own country in regard to fevers, these diseases always appearing with improvement or the stirring up and drying of the soil. No fever and ague was known in the Eastern or Western States until the land was plowed, swamps drained and roads made. The same thing is constantly occurring in our older cities to this day; not a street is graded through a hill of compact clay, loam, or vegetable mold, which does not result in producing fevers in the neighborhood. Even among the hills and rocks at the north end of Manhattan Island, where the fever and ague was almost unknown, more than fifteen hundred cases occurred the past Summer in consequence of the grading of the Grand Boulevards.—EDS. RURAL.]

We have sought to improve the sanitary condition of every province; fever still asserts its supremacy. In the saline marshes of the Sonderbunds, athwart the rich flats of Bengal, along the courses of the great rivers, in cultivated as well as waste districts, in the great towns as well as among the rice-swamps, it holds sway. The habits of the natives, as well as the climate, the heat, the rapid decay of organic and inorganic matter, the moisture, and the chemical operations of nature which never cease, favor the wasting malady. Small wonder, then, that the British Government should seek to introduce the cultivation of the cinchona tree, and thus to secure for the inhabitants the inestimable blessing of a cheap and abundant supply of the only known specific for fever.



CINCHONA PLANTATIONS AT DARJEELING, BENGAL.

The work was originated a few years ago, but great difficulty was at first experienced in obtaining seeds or young plants, the South Americans being unwilling to part with their monopoly of the drug. By perseverance, however, the materials for a plantation were at length procured; and, after some experiments to ascertain the requirements of the tree and the conditions most likely to develop its medicinal properties, a number of plantations were established in different parts of India, under the direction of Dr. KING, the superintendent of the Botanical Gardens at Calcutta.

According to that gentleman's report, two species of the cinchona are now thoroughly established and doing well, the different kinds flourishing best in different localities. At first the plants increase slowly; but as soon as their leafy heads are large enough to furnish shade they start upwards with great vigor. The reason is interesting, and characteristic of India, where the friend and enemy of all things is the sun. "The plant has to throw out fine superficial rootlets, which ramify close to the surface of the ground, and for the very life of which protection from the sun's rays is necessary."

Our sketch was taken at one of the most successful of these plantations, situated at Darjeeling, in British Sikkim, on the sides of the Himalayas. There, in a beautiful valley, thousands of feet above the sea level, the cultivator nurtures the healing plant. The vale is so completely shut in that the air where the cinchona grows is rarely stirred even by the gentlest breeze; frost is unknown, and hailstorms alone injure the thin, broad leaves of the trees; which flourish in long belts of verdure, as carefully watched and tended as children.

The cinchona plantations do not as yet yield a profit; but that Government would be foolish indeed which would grudge the cost of such an undertaking. We have often been accused of making India subservient to our national aggrandisement, and of treating the natives harshly; but in placing in their hands the means of defense against their most subtle enemy we have conferred upon them a boon for which they may well be grateful.

Our readers may possibly be interested in a description of the cinchona, of which there are several kinds. The trees are sometimes of great magnitude; but as an aftergrowth springs from their roots when they have been felled, they often appear only as large shrubs. They are all evergreens, and the flowers, which in some kinds are white, and in others purplish, are very fragrant, and resemble those of lilac or privet. The bark is known by various names—Peruvian Bark, Jesuits' Bark, China, Quina, Quinquina, Cinchona Bark, etc. With regard to the discovery of its medicinal virtues, tradition affirms that the natives of Peru had for ages been in the habit, when sick, of drinking the water of a bitter stream, until at last some curious person discovered that this water derived its quality from the bark of a certain tree, the trunks of which were washed by the current. This being known, to make a decoction of the bark was of course a simple method, and in most cases more convenient than going to the river to drink. The name CINCHONA was given to the genus by LINNÆUS in compliment to the Countess del Cinchon, the wife of a Spanish viceroy of Peru, who in 1639 brought it

to Europe. The Jesuit missionaries afterwards carried it to Rome, and thus it acquired the name of Jesuits' Bark. It was also called De Lugo's Powder, after a cardinal of that name, who was particularly active in recommending and distributing it. It attained great celebrity in Spain and Italy, but curiously enough the Protestants would have nothing to do with it. Falling, however, into disuse in Europe, it was again brought into notice by Sir Robert Talbor, or Talbot, who brought it to this country in 1682, and soon became famous for the cures he effected by its means. The new remedy was adopted by both MORTON and SYDENHAM, the most celebrated physicians of the age, and its use soon after became general, in spite of the opposition of the medical faculty in France.

The discovery of the alkaloids, on which its properties mainly depend, was a new era in the history of this medicine, and did not take place until the beginning of the present century. The chief active principle is quinine, the quantity varying in different specimens from 3 to 4 per cent. Quinine is very insoluble in water, and is therefore generally used in the form of sulphate or disulphate, which dissolves readily in alcohol and water, and is prescribed in almost all the cases to which the bark was supposed to be applicable, the use of the bark itself being almost entirely discontinued.

ARBORICULTURAL NOTES.

Rabbits and Mice Eating Trees.—Please give in the RURAL NEW-YORKER the best methods of preserving young apple trees from the rabbits and mice in the Winter.—JOHN D. PARKER.

ALMOST every kind of animal matter appears to be offensive to rabbits and they will not touch the bark of a tree that has recently been smeared with blood, grease or offal of animals. Several of our correspondents have written us that they protected their trees by smearing the stems with blood, saved for the purpose at the time of killing animals in Autumn. Any old lard or soap fat will probably answer the same purpose, but if mice are abundant then a little poison should be added; but it would be necessary to keep your fowls out of the orchard, for they would be sure to pick up any small pieces that were dropped or found adhering to the trees. This rabbit and mice question is an important one to those who undertake to raise an orchard in a new country, and if any of our readers know of a better preventive than those given above we should be pleased to give it in our columns.

Large Chestnuts.—We are under obligations to Mr. JAMES H. RICKETTS, Newburgh, N. Y., for extra large specimen of native chestnuts. We have often urged those who desire to grow chestnut timber, or the trees for ornamental purposes, to select the largest varieties to be found. A few generations of selected seedlings would result in our having in this country varieties of American chestnut that would equal, if not surpass, the European sorts in size; and it is well known that the American is far the best in flavor.

Green Worm on Evergreens.—I notice in RURAL NEW-YORKER, Oct. 19, p. 256, a gentleman is having trouble with a green worm on his evergreens. If he will prepare a strong solution lye and tobacco and syringe his trees thoroughly with the same in the afternoon, and again in the morning with clear water, he will have no further trouble with the worms. I have had trees infested with green lice and I think with the same green worm he speaks of and the preparation being used properly destroyed the pests entirely.—J. Z. C., *Onargo, Ill.*

Hedging along Railroads.—Two hundred and fifty miles along the line of the Chicago & Alton Railway have been planted with osage orange hedge, and it is all doing well. A part of it is four-year old, and will be ready to "plash" in February or March next. The Jacksonville branch of this road is to be planted with hedge in the same manner, at the rate of fifty miles per year. The estimated cost of this hedge up to the time it is four years of age, when it will be ready to turn out, is seventy-five cents per rod.

Wash for Fruit Trees.—The Western Farmer says:—Wm. HARNDEN, Esq., near this city, has for years used with very good success as a wash for fruit trees, a compound of clay, cow manure, and ashes, mixed in soap suds and applied with a brush to the trunk and branches as high as can be reached. He finds it drives away bark lice, and cleans the tree of moss, etc.

Field Crops.

PRACTICAL EXPERIENCE.

WILL farming pay? I have a decided *penchant* for farming, but as I have a living to earn, and a fortune to make, if possible, my friends have always insisted that I could not afford it—that it wouldn't pay. Two years ago I started on a "trial trip" (not making it my entire business), and on rented ground, too. I have kept accurate accounts of everything, and know that farming, *well done*, will pay.

A Profitable Investment.—One of the first things that I did, when I began, was to subscribe for the RURAL NEW-YORKER, and have since then paid five dollars and fifty cents for it. In looking over my dairy I can see how that has been my most profitable investment.

My Potato Crop.—Two or three weeks ago "Daily Rural Life" devoted two-thirds of a column to his potatoes. I will mention mine. My soil is, apparently, similar to his—light, sandy and dry. My system of culture was exactly similar to his—1st, concentration; 2d, deep covering; 3d, thorough cultivation; and I am glad to see that the plan that I have adopted is endorsed by one so competent to judge of what is the best, as I believe him to be.

This is said to be no "potato country," one hudred bushels to the acre being a good yield. My ground I had used for two or three years as a garden; when I took it, it would scarcely raise weeds. On the 29th of March I laid off one-thirteenth of an acre; it was liberally manured and two bushels (twice too much seed) of Peach Blow potatoes planted. I gave them two thorough workings, and, by the way, had two attacks from what I supposed to be Colorado Potato Beetles, the first that I ever saw. I found a faithful boy with a basket, supplemented by a good fire, the most efficient remedy.

On the 5th of Septemper I harvested twenty-six bushels. Across the road from my garden is a piece of ground naturally as good as mine, cultivated by a man who never allows a bit of manure inside his fences, and feeds his cows on the creek bank to "save cleaning his stables." He planted one-fourth of an acre to potatoes, and dug twelve bushels. To give the thing a fair test, I selected a plot of ground as much like what my garden must have once been as possible, that had never been cleared, and had it cleared, *measured*, and planted. There was two-fifths as much ground as I had in the other piece. I gave it precisely the same culture (saving manure) that I did the others, and harvested four and one-half bushels. Isn't new ground called the best for potatoes?

A Disadvantage of Renting.—I have no cool, dry cellar here, fit to keep anything in, and, as I am on rented premises, I cannot afford to build one. Now, will some one who knows about it, tell me which would be the best thing to do under such circumstances, with a crop of potatoes ripe on the 1st of September; leave them in the ground until time to store them for winter, and run all the attendant risks, or dig them and have 'em kicking around, in lofts, on the barn floor, in the corn crib, etc., for two months?

One Excuse for Time-Wasting.—This brings me to an article, "What are the Profits!" published in the RURAL NEW-YORKER Oct. 26th. I think that lack of means is frequently a cause of the waste of so much time on farms. A young man hasn't the convenience for saving work that he needs, and is obliged to do the best that he can, frequently doing the same thing over and over again that might have been better done, and finally done, under other conditions, at first. If I "estimated" things, I should think that those potato bugs had been a good deal of bother; but as I don't, I know that they have cost me $3 in handling and re-handling that might have been saved had there been a good cellar on these premises. A. R. K.

Charleston, Ka., C. H., W. Va., Nov. 6.

Who next? We like this article!

FIELD NOTES AND QUERIES.

Topping and Digging Roots.—Two years ago I saw it suggested, in the RURAL NEW-YORKER, I think, that the quickest and best way of topping roots was to do it with a sharp hoe before digging them. I have found this to be true; but I am in doubt whether I save more time by this process of topping than I lose in digging. I dig with a spade. Is there an easier and more rapid method? If your readers know any, let them impart their knowledge.—NORRIS HOLMES.

WE have found a long-handled spading-fork a good implement for digging roots—far better than a common spade. A furrow with the landside of the plow run close to the row of roots, facilitates digging wonderfully.

White Beans for Hard Soap.—I have heard it remarked by different parties that they have got to using the common white field beans in the manufacture of hard soap, which I cannot believe; for I certainly think I would have seen mention made of it in some of the agricultural journals before this time. If such should be the case, please make mention of it in the RURAL, and oblige—G. O. PATTISON.

WE know of no such use for white beans.

Corn Wanted in Europe.—Mr. MECHI makes this prediction:—I am no alarmist, but I believe that we shall have to pay for foreign corn, in quantity and price, 15,000,000 to 20,000,000 sterling more than in a good wheat season. Threshing machine owners, who thresh for hire, are desponding; for while in a good wheat season 80 qrs. have been threshed in one day, from 15 to 45 are now the usual quantities. We may reasonably infer that there will be less employment for the laborer, and that railway companies will suffer much loss of income from the diminished conveyance of corn.

Farm Implements.

DITCHING MACHINE WANTED.

I TAKE the liberty of addressing you to ascertain from you what machine is considered the best for ditching lands. The land we desire to ditch is level prairie, where nothing can interfere but the grass sods. Any information given will be thankfully received, as we are in need of such a machine; if you have not such information, please hand this letter to some reliable party who will advise us.—E. F. RUSSELL, *Portland, Oregon.*

WE know of no machine that we can recommend for open ditches, though many such machines have been invented. We do not assert that there are not those that are not practical, but we do not happen to know them. If your subsoil is a stiff clay, we can recommend the mole-ditchers that have been used successfully in Illinois. We have seen hundreds of acres of land with such subsoil drained by means of these ditches. They are operated comparatively cheap, and if one owns a machine and the drain fills up, it is easy to make another. But they are of no use unless the subsoil is a stiff clay. Where they are manufactured now we do not know; if any of our readers do, let them address Mr. RUSSELL as above.

NOTES AND QUERIES.

Bean Harvester.—Noticing an advertisement in the columns of the RURAL NEW-YORKER of a reliable bean harvester, I wrote to the man to get the particulars, but as yet I have heard nothing. Now, if there is such an implement invented for pulling beans, except by hand labor, and that will not shell them any more than in pulling by hand, I should be pleased to see more mention made of it in the columns of the RURAL; also, the price of it, and how much land one can go over with it in a day. I saw this advertisement in a July number of the RURAL, I think. I also understood the Americans had a machine for threshing beans, which I made mention of to you some three years ago, and to which you replied that there was no such machine invented. If there should be any now, inform me where they are manufactured, stating price, etc.—GEORGE O. PATTISON, *Crowland, Ont.*

Practical Potato Planter.—A correspondent at Cooper, Mich., asks,—"Will you, or some of your correspondents, tell me whether there is now in use a practical potato planter, and where it can be found, and at what price." The only one we ever saw, called a "potato planter," simply dropped the potatoes, but did not cover them. It required a man and horse to do the dropping, and we would be willing to drop potatoes a week for nothing if we could not drop more potatoes in a day than the man and horse could. The largest potato cultivators manage to cover with a plow. If some of them would give their mode in detail it would be profitable reading from readers who are potato growers.

The Swine-Yard.

EXPERIMENTS IN FEEDING SWINE.

LAST year I. P. ROBERTS, Superintendent of the Iowa Agricultural College Farm, tried some experiments in feeding swine, some of the results of which we condense as follows:

On Sept. 4, in each of five pens were put two pigs each about four months old, each rather below the average of the litters to which it belonged. in a sixth pen one older hog was placed. To each pen was fed the same quantity of food, in neither case equally full feed, but rather better than the usual feed to ordinary store hogs. In 35 days to each pen was fed 7½ bushels of new corn. The pigs in No. 1 were Natives; No. 2, Berkshires; No. 3, Chester Whites; No. 4, ¼ Berkshire, ¾ Chester White; No. 5, ¼ Suffolk, ¾ Chester White; No. 6, ¼ Suffolk ¾ Chester White.

We give the combined weight of the pigs in each pen when put in, the number of pounds gained, and the price realized for the grain per bushel at a uniform standard:

No. 1,	weight	100;	gained	93;	grain	43 cents.
No. 2,	"	144;	"	123;	"	57 2-5
No. 3,	"	178;	"	100;	"	46
No. 4,	"	184;	"	96;	"	44 4-5
No. 5,	"	148;	"	102;	"	47 3-5
No. 6,	"	220;	"	60;	"	28

Experiments with other kinds of feed were tried with somewhat varying results, but all showing larger results in the cases of the Berkshire and the cross of the Suffolk and Chester Whites.

PIG-PEN PAPERS.

Pigs—Live and Dead Weights.—In answer to an inquiry—"What proportion does the live weight of pigs bear to the dead weight?"—the Irish Farmers' Gazette says: "The proportion of dead to live weight of pigs is generally three-fourths of the live weight, when well fattened; but the dead weight of the improved breeds, when very fat, is frequently four-fifths or more of the live weight."

Sale of Swine.—Mr DANIEL GROOME, near Groveport, O., made his first annual stock sale Oct. 3. He sold about 200 swine, receiving therefor about $1,400. He proposes another sale next year.

Lice on Spring pigs.—A correspondent at Liberty, Ind., asks our readers to tell him what will exterminate lice from Spring pigs.

Scientific and Useful.

HAIR SNAKES.

PLEASE tell me what the inclosed snake-like thing is. I found it in a new well that I had just dug, but which contained no water.—J. H. GIBBS, *Macosta Co., Mich.*

IT is the well-known Hair-worm (*Gordius*), which is often found in water and moist places, and the very thing that gave rise to the old notion, still popular among ignorant people, that horse-hairs, when thrown into water, will turn to snakes.

This hair-worm is parasitic in insects, and in its young state is often found in the intestines of crickets, and occasionally in those of the spider. Only a week ago we procured one nearly a foot long from the intestines of a large black cricket which happened to fall into our wash bowl—the worm leaving the cricket for the water within a few moments, which appears to be their natural habit. When the eggs first hatch the worm makes its way into insects, whether it be grasshopper, cricket or spider, and there lives and feeds, coiled up among the viscera; and when it arrives at maturity it leaves its habitation and crawls away to some pool of water; but should the unlucky cricket or grasshopper jump into a well or water elsewhere, as the one did into our wash bowl, the worm takes advantage of it and departs at once.

There is a species—*Gordius*—which infests the honey-bee, and it is supposed that the young worms get into the bees while they are visiting ponds for water. The history of these worms is quite an interesting one to those who delight in the study of nature.

Trapping Rats.—I have found that a few drops of extract Anise, rubbed over the trap (after it has been thoroughly rinsed in water), will induce other rats to enter as readily as did the first.—H. K. GILBERT.

Scientific and Useful Inquiries.—A correspondent asks if there is anything that will cleanse old window sash so that putty will adhere?

Dairy Husbandry.

THE CLAIMS OF AMERICAN DAIRY INVENTORS VINDICATED.

It is now about twenty years since JESSE WILLIAMS inaugurated his system of cheese factories and Associated Dairying. The system as is well known has steadily gained in public favor, and is gradually being adopted by the Nations of Europe. But since it has proved a success, European writers are not wanting who seek to deprive Mr. WILLIAMS of due credit in this matter, claiming that he borrowed his system from Switzerland. It is true Associated Dairying, under a certain form, had been practiced by the Swiss previous to that inaugurated by Mr. WILLIAMS, but Mr. WILLIAMS' factories in all their details of machinery and appliances were essentially different from those in Switzerland; and except in the matter of several persons joining together to have the milk of their cows made up at one place, the Swiss and American systems are quite different. We have undoubted authority for stating that Mr. WILLIAMS had not even heard of the Swiss Association at the time he planned and erected the first American factory, and he undoubtedly was sole inventor and originator of what is now known as the American factory system of dairying.

About the time that Mr. WILLIAMS was engaged in putting his new inventions in operation, another American was conducting his investigations in the preservation of various kinds of food by eliminating the water which they contained. This field was comparatively new; or at least, no process had as yet been invented that could be said to promise anything particularly useful in its adoption. It was for Mr. GAIL BORDEN, now widely known in connection with condensed milk, to open up this field and turn it to good account. He gave it unwearied labor, struggling with alternate disappointments and successes until all obstacles were overcome, and he was able to put upon the market the article he sought, and to have it recognized as a triumphant success.

We have before us "A brief sketch of GAIL BORDEN and his relations to some forms of concentrated food," by S. L. GOODALE, Secretary of the Maine Board of Agriculture. As the subject of condensed milk is one of considerable interest to the public and especially at this time to dairymen, it will not be out of place to refer to some of the facts detailed in Mr. GOODALE'S pamphlet.

GAIL BORDEN was born in 1801, of New England parents, in the town of Norwich, N. Y. At an early age he assisted his father upon his farm, and profited, so far as practicable by the limited educational privileges within his reach. Mr. GOODALE gives a brief account of Mr. BORDEN'S removal West with his father, and his subsequent labors not only as a teacher in Mississippi, but as County Surveyor, Deputy United States Surveyor, together with his removal to Texas and the various offices of trust which he filled in that State.

Passing over his experimental labors in the production of meat biscuit and some other forms of concentrated food, Mr. GOODALE discusses the causes that prompted Mr. BORDEN to turn his attention to the preservation of milk. At this time, although Mr. BORDEN knew nothing of the "germ theory," and little of other hypotheses concerning milk, he had come to have a wholesome dread of incipient decomposition, and rightly judged that if he could prevent its beginning, its progress would make small inroads upon his products. "The object at which he aimed," says Mr. GOODALE, "took a sharply-defined form at the very outset, namely: to accomplish the preservation of milk by the simple removal of water, accompanied by security against the occurrence of possible detriment from the time when the milk was drawn from the cow until the process was completed." "Scientific friends, one of whom ranked as the peer of any in the land, advised him that his aim, in one respect, was too high—that the retention of all the butter, uninjured, in connection with other solid constituents of milk, would be found unattainable in practice, and that the removal of a part of the cream would be found a necessary preliminary step; but he utterly discarded the thought of condensing 'skim' milk, and pushed on, regardless of the advice, persevering with indomitable will and energy until his object was fairly attained."

Recognition of the merits of the article manufactured, and its reception by the public were slow, and it was not until 1861, when the war of the Rebellion made it quickly and extensively known, that the demand rapidly increased until it exceeded the supply. Mr. BORDEN now began to reap due reward for his labors, and in the words of Mr. GOODALE, "uncounted thousands of soldiers in camp and hospital—citizens both well and ill—city-born infants, pining for pure milk fit for babes, hold its inventor and manufacturer in grateful remembrance and esteem."

Mr. BORDEN'S first application for a patent was in May, 1853. The principal feature of his process was declared to be evaporation *in vacuo*. The importance of protecting the milk from atmospheric action, in order to prevent incipient decomposition, was emphatically asserted in the first application and has been held with tenacity ever since. His application for a patent was refused apparently from some stupidity of the examiners in charge at the Patent Office; but he obtained a patent in 1856 and about this time also his English patent was granted.

It is only those who have had some experience in handling milk who can fully appreciate the difficulties with which Mr. BORDEN had to contend. Milk, of all substances, is most liable to change or be affected in flavor so as to be unpalatable and unfit for human food. Mr. BORDEN had to organize, in the first instance, a system for the treatment and delivery of milk that would ensure its purity and sound condition when delivered at the factory. Then the piping of the vacuum pan and its connections had to be arranged so that all parts could be readily and thoroughly cleaned. He experienced at first great trouble on account of the albuminous matter of the milk adhering to the heating vessels. This had to be overcome. Then, again, the milk was disposed to foam and flow over in the vacuum pan, thus entailing loss. Finally the milk must be so treated and handled that it could go into the hands of the consumer unchanged in flavor, and in such condition that by an addition of three parts of water to one of the condensed milk, a pure, sweet, good flavored article, not unlike fresh milk, should obtain. The machinery to accomplish these results on a large scale is very elaborate, and all the details of the business must be performed by certain prescribed processes and with most scrupulous regard to cleanliness and freedom from all offensive odors. Thus he originated and perfected a system which entitles him to the claim of being the original discoverer of the only process for condensing milk which has received universal approval in this country and in Europe.

But a claim is set up in England that Mr. BORDEN is not entitled to the credit of this discovery, and it is upon this point that the pamphlet of Mr. GOODALE very successfully refutes these adverse claims, and proves from the most undoubted authorities that the credit of the discovery belongs wholly to Mr. BORDEN. He says: "Prior to his application for a patent Mr. BORDEN had not the remotest idea that any one had anticipated him in conceiving of the use of the vacuum process for the concentration of milk, although he was aware of its use in the treatment of syrups in refining sugar, and in the preparation of extracts. For these purposes it was employed because it enabled evaporation to proceed at a low temperature, thereby avoiding discoloration or burning. BORDEN'S employment of it was for a wholly different purpose. But upon examination it appeared that one GRIMWADE had previously conceived the idea, and had planned an apparatus for carrying it into effect, which somwhat resembled Mr. BORDEN'S. It equally appeared, however, that the process was never practiced, and probably the conception was never embodied. Satisfactory evidence of this is found in the fact that he subsequently applied for and obtained a patent for a wholly different process, an integral part of which was evaporation in open pans, which method he practiced for some years. The vacuum process in GRIMWADE'S mind probably never advanced beyond the abstract idea accompanied with plans on paper of apparatus. Either he did not attempt to carry it into execution, or finding himself unable to overcome the practical difficulties attending the process, he abandoned the attempt. He neither practiced it himself, nor did any one else under his patent. The conception fell stillborn."

Again he says:—"Diligent search by Mr. BORDEN'S patent attorney in London, in 1853, (Mr. BORDEN of Chancery Lane), failed to discover the slightest indication that any one had ever worked a vacuum pan for evaporating milk under any patent."

It is, perhaps, needless to state that the condensed milk establishments in Switzerland, in Ireland and in England are all worked under the BORDEN process. Mr. BORDEN'S patent in the United States has now expired, and will not be renewed. Mr. JESSE WILLIAMS never took out a patent upon any of his factory inventions. We can scarcely estimate the benefits that are to flow from the labors of these two men. The world has already greatly profited by their works, and we feel a natural pride that they are Americans. Their fame should be enduring. It belongs, in part at least, to the nation, and any attempt to cast the credit of their inventions elsewhere is a wrong in which all Americans are concerned. We feel grateful, therefore, to Mr. GOODALE for the work he has done in refuting unjust claims and in placing the merit of a great invention where it truly belongs.

Land Department.

CONDITION OF NEGROES SOUTH.

IN RURAL NEW-YORKER of Oct. 12 you make a statement in regard to the colored people of the South which does injustice to the Southern people; and, as I do not think it your intention to wrong any, I will simply give you a true statement of the case. The great difficulty with the colored man is that he must attend political meetings, hunt and fish, and he loses too much time from his work at the time his crop needs his attention most; besides his credit is too good, and he spends too much of his cotton before it is made.

As to his making thirty, forty or fifty bales, that is all in your correspondent's fancy; the *average* crop of the negro in the State of Mississippi is about two bales to the hand, and very often they do not make that; of course many do better, and they make some money; but every one of them own too much stock, and is kept in poverty trying to feed that for which he really have no use.

If you could only know the amount of powder and shot, and the number of pistols and guns bought by them in a year, you would not be surprised that they are poor yet; for with these they must hunt and shoot in order to get the worth of their money.

That they are sometimes swindled out of some of their cotton, is no doubt the truth, for I do not claim that every man in the South is honest any more than they are North; human nature is the same almost everywhere; and your papers North are continually filled with publications of swindles, and then only the large ones are mentioned. But with all the carelessness of the negroes, I will venture the assertion that to-day the negroes of Mississippi are doing as well as the working class of whites in your own, or *any* Northern State, if you will take into consideration the fact that they were set free only a few years ago without *any* means of support but their own labor.—W. W. FOLSOM, *Tyro, Miss.*

OUR correspondent says in his first sentence, "You make a statement, &c." We did publish a statement, but we desire it distinctly understood that because we publish a man's communication, even without comments, it by no means follows that we either indorse or believe all that he says. Our object is to arrive at the truth for our readers. Of course we have no means of verifying every statement that is made in our columns; and we expect to afford space for free, if courteous, criticism, and for the statement of any facts that may disprove or confirm what is published. It does not follow, however, that because a condition of things exists in one locality it exists in all localities; nor are the people of the South (or the North) responsible for all the evil that transpires among them.

THE VALLEY OF VIRGINIA.

THE Valley of Virginia, lying between the Blue Ridge and Alleghany Mountains, and extending from the Potomac to New River, a distance of 250 miles in length, is naturally the most fertile part of the State. The soil, to a considerable extent, is limestone, with occasional yellow slate, and broken with numerous ledges in the north end, near the Potomac, which makes it difficult to farm, at places; whilst the south end is less rocky but more rolling in places, and much easier farmed, with abundance of fine oak, poplar, hickory and walnut timber, it not having been destroyed by the armies during the war. It is also better watered by springs and streams, which afford fine water power for manufacturing. A railroad is now being built from Harrisonburg to Salem, there to intersect the Virginia and Tennessee Railroad, making a direct route to Baltimore through the Valley, and giving the farmers of the south end the choice of either Baltimore or Richmond market, either by rail from Salem, or canal on James River from Buchanan, or rail from Staunton.

Rockingham county is said to be the best for all purposes; but lands are high there. Roanoke, on the Virginia and Tennessee Railroad, near Big Lick, is perhaps the best part of the Valley for wheat. The crops the past season on some farms averaged twenty-seven bushels per acre. Lands there are also high, some held at $100 per acre, with ordinary improvements. Rockbridge and Botetourt, both have large portions of fine lands for sale; many of which can be bought from $20 to $45 per acre, (some much lower,) with plenty of timber and well watered, which will, if properly farmed and fertilized, produce from twenty to thirty bushels of wheat, and from thirty to sixty bushels of corn per acre during a fair season; and they grow clover and other grasses easily, though in many places these lands will naturally set in blue grass. Fruit does well, if proper attention is paid to it, through the entire Valley. People are kind and sociable to strangers with some few exceptions, there being quite a number of Northern families living all through the Valley. J. CRONISE.

Fincastle, Botetourt Co., Va.

LOUISIANA FOR YOUNG MEN.

I NOTE in the RURAL NEW-YORKER you make mention of divers persons writing you to advise them where to go, to secure "good homes;" among them a young man wishes to select a "pleasing home" in a warm section of our country. I hope you will insert this for his and others' benefit seeking a like home—to invite them to think of this as the place for them, as combining all the advantages of Florida, and well-nigh none of the disadvantages—a country pleasant to live in, very healthy, and where a man or family, by active industry, can make a good support on a small farm devoted to truck, fruits, and a great variety of good, useful and staple crops. We have no land to sell, but good, small homes can be had, and a hearty welcome to all honest workers who will come.

P. MCMICHAEL.

Amite City, La.

Pomological.

APPLES AND NECTARINES.

I would like to know if the Yellow Bellflower and Talman's Sweet are varieties worth cultivating; also are Nectarines, as peaches, and of which are the best sorts for this locality.—A. W. H., *Greenfield, Mass.*

The Yellow Bellflower has been and is still one of the standard varieties for New York and Philadelphia markets. It originated at Burlington, New Jersey, nearly or quite one hundred years ago, and is an old favorite apple. The Talman's Sweet is a native of Rhode Island, and although not considered a first rate table apple, it is a very popular sort on account of the hardihood and great productiveness of the tree. It is a valuable apple for feeding to stock, and for making very sweet cider. Nectarines are only smooth-skin peaches, and succeed under the same conditions. They are, however, far more liable to be destroyed by the curculio than peaches, hence their scarcity in our markets. There are hundreds of varieties, and by inquiring of the fruit-growers and nurserymen of your own State you can learn which are the best for you to plant.

The Louisiana Grape is pronounced by FREDERICK MUNICH, a Missouri grape grower, to be undoubtedly a French grape of the Burgundy family, related to the Rulander, but better, and one of the best for light wine; but it is tender and requires covering.

The Steadly Peach is described as evidently a seedling of La Grange, to which it is similar, yet is ten days later, and those who have grown it regard it as better.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Epizooty Among the Horses.—*Nov.* 7.—"How are your horses," has of late become the password among friends, instead of the older forms of recognition. My horses were taken sick with the prevalent epizootic disease, and are still on the sick list, but doing well and I think out of danger. I followed the treatment recommended by the veterinary surgeon of the Spirit of the Times,—(since published in the RURAL NEW-YORKER, see page 301, Nov. 9.—ED.) and have found it safe and efficacious. I have had my horses exercised a little every day by leading them about the place, closely blanketed, for an hour during the middle of the day. Horses are so near "human" that a similar treatment answers when they are sick. I find that flaxseed is a most excellent thing to allay irritation in the throat, and have given a handful at a time, two or three times a day, to my horses, with apparent excellent results. When too sick to eat other food they would lick up the flaxseed from the manger, seeming to enjoy its soothing effect upon the throat and glands. This disease is not a dangerous one, and few horses will probably die from it, provided good care is given, and they are not killed with medicine. There is probably more danger of giving too much medicine than too little, the same as it is with most persons when sick, they being impatient, swallow drugs instead of waiting for nature to restore health. All sorts of poisons will be poured down the throats of the poor horses that are attacked by this disease, and the old practices of bleeding, purging and blistering will be resorted to by those persons who practice a similar system in their own families when any member of it is slightly indisposed. I have already heard of several instances of such torture being practiced upon horses for this late prevalent disease, but the results are far less satisfactory than a purely let-alone system. Better not give any medicine than too much.

Storing Bulbs and Tubers.—*Nov.* 8.—In taking up bulbs and tubers, such as Tuberoses, Dahlias, Tigridias and Cannas, it is very important that they should be thoroughly dried before putting them away for Winter. Dahlias, perhaps, require less drying than any of the other kinds named, but these should have all the soil which may adhere to the tubers when taken from the ground shaken off and then exposed to a dry atmosphere until they shrivel a little before being packed away. Tigridias and Tuberoses it is almost impossible to dry too much without one puts them in an oven. If not thoroughly dried they are very liable to gather moisture during Winter, after which mold and decay soon follow. Persons having no greenhouse in which to keep such bulbs may keep them by putting into small cloth bags and then hang up in a dry, warm room, or spread thinly upon shelves in a dry cellar. Thousands of such bulbs are annually lost, and while this brings custom to those who keep them for sale, still it would be far better for the community if no losses occurred. I was reminded of the difficulty which almost every one experiences in keeping Tigridia bulbs, from finding my own getting moldy, although they were spread upon a shelf in the furnace room of my greenhouse. All such bulbs and tubers should be examined frequently during the Winter and if too wet brought out and dried. It sometimes occurs that Dahlias will become too dry and a sprinkling of water is necessary, but this will seldom be the case when kept in a cellar. Dry sand is probably the best material in which to pack Dahlia tubers in Winter, although straw, hay or chaff will answer the purpose very well. Dry thoroughly and pack in barrels, then set in the cellar and there is little danger of decay unless they freeze or become wet.

Planting Raspberries and Blackberries.—*Nov.* 9.—I am not much in favor of planting fruit trees in the Fall, especially in the more Northern States, but with such plants as raspberries and blackberries, the canes of which are cut off when set out, the Fall is certainly the best season. The roots are safely protected by the earth, and this is all that we wish to preserve of transplanted plants, and by putting them out in the Fall they are in position and condition for growth early in Spring, and usually before the ground is in a suitable condition to be worked advantageously. I have been planting several varieties of these fruits to-day, and know from long experience that the plants will make a better growth next season than if I had delayed this operation until Spring. When the plants are taken up from the place where they were growing the canes are cut off to within a foot or less of the ground, only leaving sufficient to enable us to handle them rapidly during the process of transplanting. The canes of our raspberries and blackberries are only biennial, and those that are produced this year die next, whether transplanted or not; and it is folly to try to get a crop of fruit from plants recently set out. Almost every novice in small fruit culture will try to obtain fruit the first season that he sets out his plants, but he usually pays a very dear price for it, in consequence of the check upon their growth. The old talk of "plants for immediate bearing," so common in catalogues during the "grape fever" a few years since, has nearly become extinct; still there are impatient men who cannot wait, but must try to obtain fruit the first season from all the trees and plants set out. The best way to hurry is to begin in time; and those who want fruit of their own raising in 1874 should begin now in the Fall of 1872. Money, if properly expended, will do considerable toward hastening the growth of plants, but it will not permit a man to crowd nature beyond certain limits, and a ten year old tree cannot be produced in ten months.

The Lantana as a House Plant.—While looking over my greenhouse plants to-day, I could not help admiring some small *Lantanas* in full bloom, although growing in three-inch pots. Everybody who has grown these plants for bedding out in Summer, is aware of their rank growth, which entirely unfits them for ordinary house culture in Winter, even if they could be taken up in the Fall without checking their growth. To avoid handling these large plants, or at least not trying to save anything more than the roots and a small portion of the main stem, I struck a quantity of cuttings during the Summer, putting them in three-inch pots about the first of September. These little plants, which are not more than six inches high, are now in full bloom, and will continue to produce flowers all Winter. If the lady readers of the RURAL NEW-YORKER have never tried this method of propagating and culture of the *Lantanas*, I think they will be pleased with it. There are many beautiful varieties, and all produce flowers very freely under the most ordinary culture.

How to Keep Rabbits from Gnawing Trees.—P. C. BENTON is informed that we know an orchardist who protects his trees by smearing them late in Fall with any kind of blood. He takes beef's liver and rubs it over the body of the tree as high up as he thinks necessary. He loses no trees thus treated.

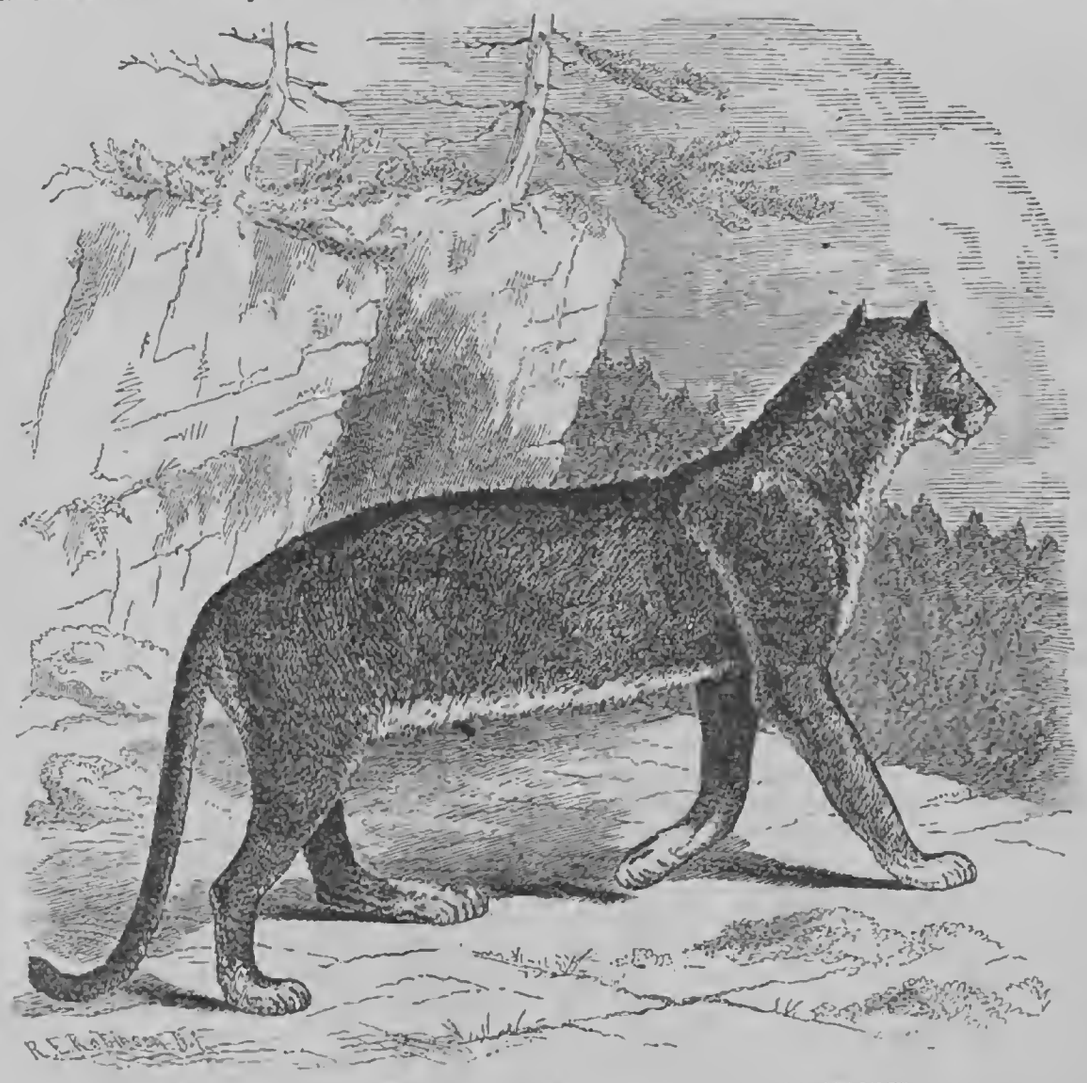
The Naturalist.

OUR FUR-BEARING ANIMALS—VII.

THE COUGAR, OR AMERICAN PANTHER.

(Felis concolor—LINN.)

THE Cougar, or, as it is more frequently, though improperly, called, the Panther, Painter, Catamount, Puma, or American Lion, was once sparsely distributed over the whole of North America south of the 45th degree. Now it is not found in any part of the United States, except in unsettled regions, and seldom is seen in the Northern States at all. It is often found in the miry swamps and evergreen glades of Florida and on the open prairies of Texas.



COUGAR, OR AMERICAN PANTHER.

Its body is about six feet long; tail, two and a-half; some are much smaller. Body, slender; head, small and round; jaws, strong; neck, long; ears, rounded; legs, short and stout; claws, strong, retractile, pearly-white; tail, long, slender, round, sometimes trailing, not tufted, that of the male longer than that of the female. The color is given so differently by different writers, it must vary in the specimens, and probably with age, the seasons and the climate. AUDUBON gives the color of the body and legs uniform tawny; under surface reddish-white. THOMPSON says the general color on the back is brownish-red; sides, reddish-gray; belly, light ash. Another writer says the upper parts of its body are a bright, silvery fawn; beneath and on the inside of limbs, nearly white. The ears are blackish; lips at the moustache, black; throat, whitish; tail, brown at tip. The young are beautifully spotted and barred with blackish-brown, and their hair is soft and downy.

The Cougar lives in the very wildest parts of the country, in deep, wooded swamps and mountain cliffs. Its den is generally near the mouth of a cave in the rocks. In the South, its lair is in dense thickets or cane-brakes. It is a rude sort of bed, of sticks, weeds, leaves or mosses, and where the evergreen canes reach over it. During the day it usually lies concealed, and hunts in the night. Its peculiar cry strikes horror to the heart of the remote settler or luckless traveler, though being quite cowardly, it seldom attacks man unless driven by extreme hunger, or when wounded and at bay. It generally takes its prey by creeping, with a cautious, noiseless step, within a proper distance, and then leaping upon it and seizing it by the throat. If it be a large animal, like a calf, sheep or deer, he swings it upon his back and dashes off with great ease to some retired place where he feasts at leisure.

THOMPSON says:—"Some years ago one of these animals took a large calf out of a pen in Bennington, Vt., where the fence was four feet high, and carried it off on his back. With this load he ascended a ledge of rocks where one of the leaps was fifteen feet in hight."

He generally lives on small animals, as young deer, skunks, raccoons or birds. The female Cougar is a very affectionate mother and never leaves her young, except at long intervals, to procure food. The whelps, usually two in number, are produced in the Spring, though far South they are sometimes found in the Fall.

Travelers who fear a visit of a panther at night, build a large fire, which serves to keep this cautious animal at a distance. In the great wilderness of Northern New York it is sometimes hunted, but not successfully; it is usually shot when come upon accidentally, during the pursuit of other game. We were told by CURTIS STEVENS, who was one of the most successful hunters of this region, as well as one of the best men we ever knew, that he once followed two panthers three days without being able to get a shot; and only once or twice getting a glimpse of them. Another hunter, going to put out his dogs, heard something following him, and on looking around saw a large panther, which he killed with a well directed shot. It apparently followed him through curiosity rather than with any evil intent; and it is the testimony of all the Adirondack hunters that this animal will not attack man. In the South it is hunted in the same manner as the wild cat. It is quickly "treed" and generally shot, but sometimes shows fight before taking to the tree and sometimes after it falls, being wounded.

We are unable to give much information concerning the trapping of this animal, as it is so scarce and roving in its habits it is seldom caught, except in traps set for wolves or bears. Sometimes, when it has killed a large animal, having gorged itself, it retires until hunger induces it to return; in such cases a trap may be carefully set by the carcass. We do not find the value of the skins among the New York price list of furs, hence are unable to give it. R.

Sheep Husbandry.

USE FULL BLOODED BUCKS.

PERHAPS the most important step in securing and maintaining a good flock of sheep is the securing of males that are the perfect type of what you wish your flock to be. As to what a male should be I would say first let them be thoroughbred. No grade buck should ever be used when there is a desire to improve or even keep up the quality of the flock, even though he may be the most desirable in appearance of the whole flock. The chances are against the transmission of his desirable qualities; it is probable he will transmit undesirable qualities of his ancestors that are concealed in him. A thoroughbred male can be relied on to reproduce himself in his offspring, but such is not the case with a grade, however perfect he may be in form. Second, I would say let him be a good specimen of the breed (whatever that breed may be.) Among the best of flocks there will be a difference. While all may be good, some may be better and others best. I would say get the best at any price in selecting males. Be sure he has an eminent degree of all the essential points of the breed in size, make, characteristics of wool, etc. Again let him be sound in constitution and limb. It is found that defects and disease are more easily communicated to offspring than more desirable qualities. Hence everything of this kind should be avoided with scrupulous care. The character of the female is of less importance. True, if a man has a flock of thoroughbred ewes to begin with, all the better, his work is half done; but if he has a flock of grades or scrubs, he need not go to the expense of buying a full-blooded stock to build up a flock with. With proper care in the selection of bucks, a flock can soon be built up to a high point of excellence with only common ewes to start with. With the facilities now offered for securing choice bucks, there is no excuse for the man who continues to propagate the scrub stock of the country. Let none but first-class males be used, and soon all our flocks will become first-class flocks.—*Cor. Agricultural Commonwealth.*

NOTES AND QUERIES.

Price of Angora or Cashmere Goat Fleeces.—We see it stated that the fleeces of the Cashmere goat in California (there are said to be 70,000 pure and grade animals of this breed in that State) bring $1.20 per pound—that is, wool of the pure bred goats do. We do not believe it. Will some Californian tell us if he *knows* it to be a fact.

Manufactures.

THE PATENT ARION PIANO FORTES.

Where and How they are Made—A Model Piano Factory.

VERY many good pianos are made in the United States, among which the Arion piano forte takes high rank. It is already celebrated for its fine tone and durable construction, so much so that a brief account of the establishment where they are manufactured will not prove uninteresting to our readers.

Owing to the rapidly increasing demand for their pianos, the Arion Piano Forte Company were compelled, a few years since, to greatly enlarge their manufacturing facilities, and they selected as the site for their new factory an entire square, in Mott Haven (or what is now called North New York). Here they have erected one of the largest and most elegant factories to be found in the United States, from which they are enabled to turn out from fifty to seventy-five piano fortes per week, finished and complete in all their parts. The main structure is an ornamental brick building, 267 feet long by 40 feet in width, and four stories high; in addition to this there is a two story brick building 130 feet by 30 feet, and a boiler-house with a drying-room over it, 40 by 75 feet, and a fine two story brick stable, together with a series of lumber sheds, etc. The Company have also just erected and completed a very neat row of three story French roof cottages at the eastern end of their grounds, which will be occupied by their workmen. The entire factory is divided into several departments, according to the process of construction, each of which is placed under the constant personal inspection of a skilled foreman; no man is permitted to work at more than one branch of the business; thus each man continually working at but one article must attain the highest perfection.

The immense engine of one hundred and fifty horse-power which propels the entire machinery is situated in the main building. The two-story brick building contains all the wood-working machinery, among which is an immense Daniel Planing Machine, numerous circular, band and gig saws, jointing and boring machines.

From the fact that all the various machinery has been purchased new within a year, the Company have had a decided advantage in procuring the latest improvements in this line. The second floor of this building is used for manufacturing the keys and actions. Adjoining the factory buildings is the Company's lumber yard, in which is constantly stored *upwards of one million feet* of the choicest lumber, which is purchased in large quantities from the manufacturers in the West and North, and comprises all the different varieties of wood used in the construction of the instruments. All the lumber used in the factory is subjected to from one to two years' weather-seasoning before being placed in the steam-heated drying room, where it remains for several months longer. The ground floor of the main building is devoted to the preliminary work on the instruments, such as drilling and finishing the iron frames, making the bottoms, tops and rims, and carving the legs and lyres; from thence the work is transferred by a steam elevator to the third floor, where the cases are put together and finished, and the sounding-boards put in; they are then sent up to the fourth floor, where the varnishing, ornamenting and stringing is done. On the roof of the rear two story building is erected a large covered platform (which is connected with the varnishing floor by a bridge) where all the varnished work is thoroughly dried in the *open air*—this is one of the reasons why the Arion Pianos possess such an *elegant exterior finish*. From the varnish floor they are lowered to the second floor, which is devoted to the finishing, fly-finishing, regulating and tuning; from here the instruments are transferred to the shipping room, from whence they are either shipped direct to purchasers, or sent to the warerooms of the Company, No. 5 East Fourteenth street, which, by-the-by, are very elegantly fitted up. The private office is luxurious, and much taste has been displayed in the frescoing and ornamenting of the warerooms.

Mr. G. C. MANNER, the Superintendent of the factory and inventor of the improvements used in the construction of the Arion Piano, is a practical piano forte maker of *over twenty-five years' experience*, and, in addition, is a skilled musician. He devotes his entire time and ability at the factory, and *every* instrument is carefully inspected and *thoroughly tested* by him before being sent away; hence it is that each and every Arion Piano proves a permanent advertisement for the Company.

The general business management, warerooms and various purchases, are under the control of Mr. J. B. SIMPSON, Jr., the Secretary and Treasurer, who (although a young man) has had a large amount of experience in mercantile life, and fully maintains the high reputation he has gained as a successful business manager.

The sales of the Arion Piano Forte Company are steadily increasing, and we venture to say that there are very few manufactured articles which have gained so noted and deserved a reputation, in comparatively so short a time, as the Patent Arion Piano; the secret of which is, that this Company, fully appreciating the fact that a *good article* is the best recommendation they can have, allow no instrument to leave their factory, excepting such as must prove a *permanent guarantee* of the reliability and quality of their make. Another cause of the "Arion" possessing such uniform excellence as characterizes it, is that *every part* is made in one factory, under the same supervision.

Visitors to the warerooms where the pianos are exposed for sale, can gather only a very imperfect idea of the immense amount of skilled labor, and the great variety of material involved, in the construction of the piano, and it would well repay any person to make a tour of the Arion Company's establishment; he would then understand how it is that these instruments have, in so brief a time, risen to a position among the highest in the estimation of the musical profession.

MANUFACTORY OF THE ARION PIANO FORTE COMPANY.

The Poultry Yard.

TO BREED GREAT LAYERS.

IN every lot of hens some will be better layers than others. Let us suppose we start with six Houdans—a cock and five hens. Probably out of this five, two may lay thirty eggs per annum more than either of the others; their eggs should be noticed and only these set. By following this for a few years a very great increase in egg-production may be attained. My attention was drawn to this subject by a friend having a Brahma pullet, which laid nearly three hundred eggs in one twelve-month, though valueless as a fancy bird, and the quality descended to several of her progeny; and I have since found other instances which prove conclusively that a vast improvement might easily be effected in nearly all our breeds, were that careful selection of brood stocks made for this purpose, which the fancier bestows on other objects. It is to be regretted more is not done in this way, and having more room than I had, I hope myself to make some experiments in this direction shortly. I will say now that I am perfectly certain the number of two hundred eggs per annum might be attained in a few years with perfect ease were the object systematically sought; and I trust these few remarks may arouse a general attention to it amongst those who keep poultry for eggs only, and who can easily do all that is necessary without any knowledge whatever of fancy points, or any attempt to breed exhibition birds. L. WRIGHT.

"Are Carrier Pigeons Bred in this Country?"—So asks a correspondent. We do not know that any one is breeding them here.

POULTRY NOTES AND QUERIES.

Chickens with Crooked Necks.—I ask you, or any of your numerous readers, what ails the chickens? I have had three, in the last two months, that got their heads a little to one side, and their necks appeared to be stiff and crooked, so they could not pick up corn, and of course died. I had one whose mouth I opened, and he lived two weeks; but his neck got two or three short crooks, so that it was difficult for him to breathe toward the last; and then he died. —G. W. THUEY.

WE have had no experience with such a trouble among chickens, and shall be glad to receive information from some one who has.

When to Use Young Cocks.—I should like some of your experienced poultry breeders to tell me how old a male chick should be before he is allowed to serve hens—I mean keeping in view the health and durability of the bird and the vitality of his progeny. I think this an important matter to breeders, and should like an expression of opinion based upon experience. —R. P. C., *Stamford, Conn.*

WE may say, without desiring to forestall the expression of opinion of our readers, that we have asked several breeders a similar question, and the minimum age given was six months and the maximum ten months—the majority preferring from seven to nine months.

Fattening Geeses' Livers.—Can you tell me whether it is the practice among farmers or poulterers in this country to fatten geeses' livers for that dish so highly prized among epicures known as *pate de foie gras?* If so, will they please give the process through the RURAL? — YOUNG POULTERER.

IN the RURAL NEW-YORKER of February 17, 1872, pages 113 and 114, we gave illustration and description of the German method. We do not know that there is anything of the kind practiced in this country.

Preserving Eggs.—A Parisian paper recommends the following method for preservation of eggs:—Dissolve four ounces of beeswax in eight ounces of warm olive oil; in this put the tip of the finger and anoint the egg all around. The oil will immediately be absorbed by the shell and the pores filled up by the wax. If kept in a cool place, the eggs, after two years, will be as good as if fresh laid.

A Hen Becomes a Genuine Rooster.—STANWOOD BROOKS, of Abbeville, South Carolina, has in his possession a strange chicken. It is a hen changed into a rooster. The chicken laid the eggs, and raised a brood of chickens this year, since which time it has undergone a complete metamorphosis. It has a new comb and tail, and it is to all intents and purposes a rooster. So it is said.

Domestic Economy.

TO MAKE COFFEE.

I AM a little girl of twelve years. I know how to make good coffee, such as we have every day for breakfast. Do not parch at one time more than one pint—two cups full; parch it in an oven moderately hot—not hot enough to burn it; parch it to a dark brown, until it will break in pieces by pressing between your thumb and finger; then empty it in a pan to cool. When it is cool enough to permit you to rub your hands through it, break an egg, and pour the white in the pan of coffee, rubbing with the hands until it is mixed thoroughly with the coffee; if the heat of the coffee does not dry it, set it by the fire and it will soon dry; then put it in a canister and keep it air tight, if you can, and grind it as you use it.

Now, for the making the coffee. Have the coffee pot clean washed; scald it with boiling water before you put the ground coffee in it; then put in the coffee, ground fine; pour the boiling water in it and set the coffee pot on the stove; set a saucer of cold water on top of the coffee pot to condense it; when it begins to boil set it off; don't let it boil a minute; if you do you will lose the flavor of the coffee. MOLLIE M.

ODDS AND ENDS.

Chow-Chow Recipe.—JULIA A. POWELL wishes a recipe for chow-chow. I have one, taken from an old GODEY'S Book, which I think very nice:—To one peck of green tomatoes add three good sized onions, six peppers (with the seeds taken out); chop together and boil three minutes in three quarts of good elder vinegar. Throw this vinegar away after straining. Then to three quarts of nice new vinegar, when scalding hot, add two cups of sugar, one tablespoonful of cloves, ground, one of allspice, two of cinnamon, three of table salt; pour over the tomatoes hot. You can omit part or the whole of the onions and peppers and still have a very nice pickle.

Will some of your readers give a good easy recipe for making soft soap with potash?—S.

Ornamenting Lamps.—I wonder if many readers of the RURAL are aware what a pretty effect may be produced by pasting with mucilage, Autumn leaves and ferns on the inside of porcelain shades. I refer particularly to those belonging to the Student Lamps. Of course thy should be the brightest, smallest specimens, and may be arranged either in clusters or a wreath all the way around. They should be prepared in the usual way, pressed or ironed. I brushed mine with linseed oil, but I'm not sure that is essential. They will remain bright two or three months, and when faded can easily be soaked off with warm water and replaced with others.—H. H. K.

Potato Salad is a favorite dish in our family, but quite different from the RURAL'S recipe. Take four large Irish potatoes, boil soft and mealy; mash with a fork until entirely free from lumps; season with salt and pepper quite strong. Boil three eggs hard; mash the yolks to a paste with a little vinegar, then fill the cup about half full of vinegar and mix it in the potatoes thoroughly. Slice the whites over the top when the salad is placed in a dish, and your inquirer will have an article of food with which she will be much pleased.—MRS. L. T. D., *Griffin, Ga.*

Orange Mince.—Did any of your readers ever eat it? It is delicious. Peel and remove the seeds from sweet Havana oranges; slice, and cut the slices into small pieces with a sharp knife; to these add lemon chopped fine, without the peel, in the proportion of half a lemon to six oranges; and a finely-grated cocoanut may be added if available and desired; make a thick sirup by dissolving and boiling for ten minutes, a pound of sugar in a pint of water; pour this sirup on the fruit; let it cool, and serve in a glass dish.—MRS. FANNIE W. GLEASON.

Cucumber Pickles.—To one gallon of cucumbers take a teacup of molasses, half the quantity of salt, a handful of mustard seed, one red pepper; put this mixture in a little vinegar and heat it to boiling, and while hot pour over the pickles; then cover with cold vinegar. In the jar put a piece of horseradish; they will keep a year.

Will some one please tell how to slip tomatoes in the Fall in order to have early ones in the Summer?—T. E. O., *Millport, N. Y.*

Recipe for Potato Salad.—My wife has used the following one to my satisfaction for a number of years:—Cut cold boiled potatoes in slices, and also one onion and small garlick; then season with two tablespoonfuls of salad oil, half-pint of vinegar; pepper and salt to taste; to be mixed three hours before serving; serve cold.—M. H. PARCELS.

Pickled Peppers.—Use the peppers green. Cut the stem end off and remove the seeds carefully; soak in salt and water twenty-four hours. Take them out and rinse them. Take good cabbage, cut very fine, and stuff them; sew the stem end on and put them into vinegar. In two weeks they will be ready for use.—LORETTA E. KNAPP.

To Fry Potatoes.—Place some slices of salt pork upon the bottom of a frying-pan, and after paring your potatoes and slicing them quite thin, place them over the meat and cover tightly; fry them about a half hour, stirring them over frequently after they begin to brown.—J. A. T., *Boone Co., Ill.*

Lemon Butter for Tarts is made by using one pound of pulverized white sugar, the whites of six eggs and yolks of two together with three lemons, including grated rind and juice; cook twenty minutes over a slow fire, stirring it constantly. It is splendid.—MARY P. SLOCUM.

Domestic Inquiries.—CORNELIA E. asks how to tell good flour from poor, since she finds so much flour only fit for hogs.

Hygienic Information.

HYGIENIC NOTES AND QUERIES.

Carbolic Acid and Small Pox.—Dr. ALEXANDER WATSON, in the Lancet (an English medical journal) has recorded several cases of small-pox and scarlet fever, in which the external application of carbolic acid met with marked success. In the case of one patient with small-pox whom he saw at the period when papulæ appeared, he ordered an enema, and then he had the patient—a girl of eleven years—sponged all over with carbolic acid soap suds. On the next day a severe attack of confluent small-pox was threatened, but the child was sponged as she had previously been, and then her whole body was painted with the carbolic acid glycerine of the British Pharmacopœia. Five grains of Dover's powder were then given to allay irritability, and the little girl slept quietly for several hours, when she was sponged again. No vesicles formed, and the patient was convalescent in a few days. Carbolic acid was, in the meantime, plentifully used about the room.

Chronic Diarrhea Remedy.—Say to your correspondent, E. FITZ SIMMONS, that chronic diarrhea can and has been cured by wearing a cotton or woolen flannel bandage night and day around the stomach and bowels. To make the bandage, take two strips of flannel (woolen preferred) ten or twelve inches wide, and long enough to go around the body and lap a few inches; *quilt* them together. This can be fastened in place with hooks and eyes or tape, as the wearer prefers. The above is also a great aid to weak digestion and dyspepsia. The writer, while in the army, was greatly afflicted with dysentery until he found relief and cure by the above simple remedy. Can any of your readers give a remedy for a bronchial trouble known as "minister's sore throat?"—CHAMPLAIN, *Vergennes, Vermont.*

Remedy for Chronic Diarrhea.—In reply to E. FITZ SIMMONS, who asks for a remedy for chronic diarrhea, I would say that I have been cured of that difficulty of several years standing, by taking two tablespoonfuls of molasses, one teaspoonful of castor oil, and ten drops of laudanum; stir them all well together, so that they are thoroughly mixed; one tablespoonful three times a day, until the diarrhea is checked. I continued taking it once a day some time after.—A CONSTANT READER.

I WILL give E. FITZ SIMMONS a recipe for chronic diarrhea which cured me, and I think, in all probability, will cure any body:—I take one ounce of deodorized tincture of opium and two ounces of fluid extract of blackberry root, mixed; for a grown person, one teaspoonful as often as necessary.—W. H. S., *Peru, Ill.*

To Color Human Hair Black, and not stain the skin, it is asserted that a liquid may be made by taking one part of bay rum, three parts of olive oil, and one part of good brandy, by measure. The hair must be washed with the mixture every morning, and in a short time the use of it will make the hair a beautiful black, without injuring it in the least. The article must be of the best quality, mixed in a bottle, and always shaken before applied.

Eggs in Case of Trouble.—The white of an egg is said to be a specific for fish bones sticking in the throat. It is to be swallowed raw, and will carry down a bone easily and certainly. There is another fact touching eggs, which it will be well to remember. When, as sometimes by accident, corrosive sublimate is swallowed, the white of one or two eggs taken will neutralize the poison, and change the effect to that of a dose of calomel.

What Causes the Hair to Turn Gray.—An English writer has recently asserted that an undue proportion of lime in the system is the cause of premature gray hair, and advises to avoid hard water, either for drinking pure or when converted into tea, coffee or soup, because hard water is always strongly impregnated with lime. Hard water may be softened by boiling it; let it become cold, and then use it as a beverage.

Difficulty in Speaking.—A correspondent who has a difficulty in speaking, thus describes that difficulty, and asks if any one can suggest any remedy. He says:—"A disagreeable water gathers in my mouth, and when asked a question I cannot get the word out for a time; but it is not stammering. When I once begin to talk, I can go on for a considerable length of time without trouble till I stop again." Can any of our readers suggest a remedy?

Recipe for Corns.—The following is an English remedy:—Bathe the feet well in warm water, then with a sharp instrument pare off as much of the corn as can be done without pain or causing it to bleed, and dress once a day with the following salve: Black oxide of copper, gr. xv.; lard, oz. ss.

Cold Back and Feet.—Can any of your readers give me a remedy for cold back and feet. Have been to some good physicians, but got no help. I am a machinist and still at work at the trade—J. J. B.

Entomological.

TALKS WITH CORRESPONDENTS.

A Handsome Beetle.

THE beetle sent by H. C. WILSON, Covington, Ind., is the *Dicaelus purpuratus*, BON. It is a very flat thin beetle about an inch long, the elytra of violet purplish color. It lives under stone, and is supposed to be beneficial to the agriculturist.

Horned Passalus.

Several subscribers have sent us specimens of this great, lazy, but handsome, beetle, which may be found in abundance under old logs and rotten stumps, supposing it to be the *Amblychila*, figured in the RURAL NEW-YORKER of Oct. 12. As we have before stated, the *Amblychila*, of which we desire to obtain specimens, will not be found east of the Mississippi River. It is also quite a lively insect, running very rapidly when pursued. Of course, we have no objections to receiving insects from any locality—in fact, the more our readers send, the better, and we will endeavor to give what information we possess in regard to the same.

The three large black shining beetles about an inch and a-half long, sent us by A. J. H. BILLBROOK, Ohio, are the Horned Passalus, (*Passalus cornutus*, FABR.,) and quite a different insect from the *Amblychila*, figured in the RURAL NEW-YORKER of October 12. We are pleased to know that our readers are on the lookout for this rare beetle; but there is not the slightest chance of any one finding it east of the Mississippi River. It may be found on either side of the Rocky Mountains south of Montana, but we think not elsewhere.

Minute Dung Beetles.

Inclosed find specimens of beetles that have appeared here in immense numbers, the air fairly swarming with them. Please give their names and habits.—W. H. HARTER, *Hall's Corners, Ind.*

The small beetle about an eighth of an inch long, with black head and thorax, wing cases light brown marked with black spots, is one of the many species of *Aphodius* which breed in heaps of old, decaying vegetables and manure. The name of this particular species is *A. inquinatus*, FABR. In Autumn they frequently appear in immense swarms flying about barn yards and in gardens. We do not think that they do any harm to vegetation, their larvæ merely aiding the decomposition of vegetable matter.

Vanilla Agraulis.

I send a butterfly, bred from one of a multitude of worms that have been destroying my *Passiflora cerulea*. What is it? Can it be prevented? My plant was so entirely covered I had to tear it down and strip the leaves off to get rid of the worms. Will the vine die? It was very large and in a state of rapid growth, full of buds and bloom. If it lives, what can I do to prevent a return of the worms? Is the Passion vine more liable to be eaten by worms than other vines? These worms ate no other plant.—ACACIA, *Brownsville, Texas.*

The butterfly is a quite common one in the Southern States, and, as you state, the larva or worm feeds upon the Passifloras. Its name is *Agraulis vanillae*, LINN. The worms (larvæ) are cylindric, pale fulvous, with four blackish, longitudinal bands, of which its two dorsal are sometimes wanting; furnished with ranges of blackish spines. The butterflies are quite large, expanding about four inches; the wings are dull yellow, ornamented with a great number of brilliant, silver-colored spots. We do not know of any better method of keeping this insect in check than by gathering and destroying the worms. Perhaps dusting the vines with lime might prevent their attacks; it would be worth trying even if it did no good. Stripping off the leaves from the plants while they are growing will certainly injure them, if it does not kill outright. The Passifloras are not more liable to attacks of worms than other plants, as each has one or more enemies in the insect world; but when we cultivate but a few of any particular species, we are more likely to notice the attacks of insects, as you have in this instance. The *Agraulis*, seeking for its natural food, made havoc with your plant of Passiflora; but had there been a thousand plants in your garden or neighborhood, instead of a small number, the ravages of this insect might have passed unobserved.

Spider for a Name.

Please name the spider herewith inclosed and give a sketch of its habits. Is its bite poisonous? It lives in walls of houses and does not spin any web.—AUG. B. QUICK, *Purdy's, N. Y.*

We have not made the study of spiders (Arachnida) a specialty, therefore do not pretend to know all or any considerable number of our native spiders. There are very few spiders in the Northern States that are injurious to man or beast; but most of them are beneficial, as they aid us in destroying noxious insects. The far too prevalent notion that our common spiders can injure any one is fallacious.

Moths From Tennessee.

We have received a collection of moths and a few butterflies from Mrs. C. C. S., Columbia, Tenn., for which we return our thanks. They were packed according to directions given in the RURAL NEW-YORKER, page 281, April 27; consequently arrived in good order.

Hawk Moth.

Enclosed you will find an insect never before seen in this vicinity. You will please give me the name, and also tell me the name of the best entomological work for classification, and oblige, J. B. K., *Lithopotis, Ohio.*

The name of the insect is *Chœrocampa tersa*, DRURY. It is one of the Hawk Moths, the larva of which is a light green worm with a large subdorsal, crimson ocellus on the fourth segment, containing a blue ring and edged with black and white rings. You may have never seen one of these moths before, but it is common all over the United States. CLEMENS says it is found in South America, Mexico, West Indies, Southern States, Illinois, Ohio, and Texas. This is certainly a pretty extensive range for a moth which you think was never before seen in your locality. PACKARD'S "Guide to The Study of Insects" is a good work on classification.

Poisoning Cockroaches.

The Garden says:—"We are informed by Mr. Anderson of Meadow Bank, the famous Orchid grower, that he destroys cockroaches with certainty by using a mixture of one part arsenic, one part white sugar, and one part lard, all the three to be white. It is essential that the arsenic be white, or failure will result."

The Literary World.

NEW PUBLICATIONS.

Hints on Dress is the title of one of G. P. Putnam & Son's Handy Books.

THERE is a great deal of good sense in this little volume, written by a woman—ETHEL C. GALE. One paragraph attracts our attention as we glance through it:—"It is in too many cases forgotten that it is impossible for any to be considered well dressed who have exceeded not merely the actual, but the proportionate limits of their purses. Thus, a woman who has an income of but $600 over the sum necessary for her board, even though she does not run a penny in debt, yet if she expends that amount upon her dress, has transgressed the rules of good taste. She who is attired in a more expensive manner than her income will warrant, can never be well dressed. Good Sense and Good Taste are Siamese Twins; when one is wounded the other feels hurt." If any other evidence were needed that the author of this work is a woman of both good taste and sense, we should think such evidence wasted upon the person who required it.

Harper's Periodicals.

THE happy combination of first-class engravings with first-class reading matter, is a strong feature in the periodicals issued from the house of HARPER & BROTHERS, N. Y. The Monthly Magazine is a capacious repository, full of instructive and entertaining reading for the family, and handsomely illustrated. The Weekly is fresh and healthy in its reading, and most piquant in its illustrations. The original conceits of NAST, the inimitable caricaturist, are more expressive than any essay of words could be. The Weekly Bazar is an elegant exponent of the fashions of the times, in both its pictorial illustrations and its letter press descriptions, all of which are full and elaborate. One or all of HARPER'S periodicals is essential to every well regulated family. Terms of each, $4 a year; the whole three for $10; any two for $7.

Hope Deferred. By ELIZA F. POLLARD. New York: Harper & Brothers.

A STORY of French life, with the scenes in Paris and Rome. Of course it is a love romance, and JEANNIE and CHARLES DE LUTZ go through a world of trials before they become happy at last. Price 50 cts.

LITERARY ITEMS.

JOSH BILLINGS is lecturing in Iowa.

MR. EMERSON has taken shelter in the Old Manse.

ANNA DICKINSON is quietly studying up new lectures at home.

MR. HUDSON'S "History of Journalism" will soon be published.

FARJEON is coming to this country. He has recently been sick.

DR. WHITNEY of Yale College is to bring out a work on Philosophy.

JOAQUIN MILLER is writing a $2,000 Poem for the Overland Monthly.

MRS. LEONOWENS' new book on "Oriental Tales" will be published soon.

THE proof sheets of Mr. SEWARD'S new book are being received at Auburn.

REV. DR. BUSHNELL is preparing a book called "Sermons on Living Subjects."

DR. IRENAEUS PRIME has written a history of the Fulton Street Prayer Meeting.

FROUDE expects a busy season of work here. He has lectured at Cornell University.

THE WEEK, a handsome New York weekly, in its new form, is a beauty, and worthy of all success.

THE Spectator is the largest, handsomest, and one of the best insurance papers published in the United States.

ALL lovers of books and curious literature should take J. SABIN & SON'S American Bibliopolist, published in New York. It is a repository of Notes and Queries.

THE Typographic is the title of a very handsome Boston publication devoted to the interests of the printing business. It is excellently well printed, upon the best of paper, and is full of news items for printers.

WATSON'S Guide to the Kansas Pacific Railway for 1872 is a handsome book of the well-known size and shape of Appleton's Railway Guide. It has good maps, fine illustrations, and is full of information about Kansas,

Industrial Societies.

INDUSTRIAL SOCIETIES.

National Convention of Short-Horn Breeders.—Arrangements have been made by which breeders attending the Short-Horn Convention at Indianapolis, Nov. 27, will be passed at half fare over the following roads:—Indianapolis, Bloomington & Western; Indianapolis, Peru & Chicago; Indianapolis & St. Louis; Cincinnati & Indianapolis Junction; St. Louis, Vandalia & Indianapolis; Jeffersonville, Madison & Indianapolis. The following will issue tickets at one and one-fifth fare for the round trip:—Cleveland, Columbus, Cincinnati & Indianapolis; Indianapolis, Cincinnati & Lafayette. The Pittsburg, Cincinnati & St. Louis will issue at the same rate to parties of twenty or more from the same station.

Illinois State Wool Growers' Ass'n.—The annual meeting of this Association was held during the recent State Fair at Ottawa, and the following officers elected: *Pres.*—A. M. GARLAND, Springfield. *Vice-Pres.*—Daniel Kelly, Wheaton. *Sec.*—James. S. McConnell, Chatham. *Treas.*—Joshua L. Mills, Mt. Palatine. Resolutions condemning the action of Congress in reducing the wool tariff, urging the taking of steps to secure an efficient dog law for the State, and recognizing and appreciating the rapid increase of the mutton breeds of sheep in the State, were adopted.

Anti-Horse Thief Society.—Some months since we noticed an organization of this kind along the Hudson River. Now it seems a similar organization exists in the Sates of Illinois, Iowa and Missouri having 56 subordinate and co-operating societies, for which a membership of 2,000 is claimed. At a recent delegate meeting of subordinate societies at Farmington, Iowa, it was stated that but two horses had been stolen from members during the year, and that in both instances the thief had been caught and delivered up to justice.

Petersburg, Va., Ag. Soc.—Oct. 25, this Society elected the following officers: *Pres.*—W. ROANE RUFFIN, Chesterfield. *Vice-Prest's.*—Dr. R. Epps, E. Dromgoole, Dr. M. Q. Holt, W. B. Westbrook, J. P. Herndon, Wm. B. Byers, Wm. R. Mallory, Gen. M. W. Ransom, Paschal Buford and Judge Wm. H. Mann. *Ex. Com.*—C. N. Romaine, chairman; R. H. Jones, Sr., J. C. Drake, J. T. Mason, J. V. H. Nash, C. W. Spicer, T. L. Johnson, H. Cousins and J. H. Batte. *Sec.*—Col. J. A. Peterson. *Cor. Sec'ys.*—J. V. H. Nash and E. S. Gregory.

The North Carolina State Ag. Soc. held its Annual Fair at Raleigh in October, and a correspondent, "Ida Theia," writes us it "proved a grand success—that there was a good many blooded horses; Chester, Berkshire and other breeds of swine; Ayrshire, Devon and Short-Horn cattle; good representation of the various breeds of poultry, except Creve-Coeur. The halls were well filled, and the whole show reflected credit on the State. Gen. W. R. Cox delivered an excellent address.

The Pennsylvania Poultry Society holds an Exhibition at Concert Hall, Philadelphia, Dec. 6 to 13, inclusive. Its officers are; *Pres.*—WILLIAM WISTER. *Vice-Pres.*—D. W. Hersting. *Treas.*—Charles L. Sharpless. *Cor. Sec.*—A. P. Graves. *Rec. Sec.* J. Duval Rodney. *Ex. Com.*—Dr. Thos. R. Baynor, W. H. Churchman, D. Beaumont Ord, John E. Dethl, Jesse N. Reuke, Sam'l P. Courtney, Johnson Hughes, Jos. M. Wade, Mark Schofield, Edwin Stuart.

Wisconsin State Ag. Society.—Officers elect for 1872-73:—*Pres.*—WM. R. TAYLOR, Dane Co. *Vice-Presidents*—1st Dist., Rufus Cheney, Wadsworth; 2d Dist., Chas. H. Williams, Sauk; 3d Dist., J. H. Warren, Green; 4th Dist., John. L. Mitchell, Milwaukee; 5th Dist., S. Clark, Horicon; 6th Dist., Eli Stilson, Oshkosh; 7th Dist., J. C. Thorp, Eau Claire; 8th Dist., John T. Kingston, Juneau. *Sec.*—W. W. Field, Grant Co. *Treas.*—F. J. Blair.

Tennessee Apiarian Society.—Officers elect for 1872-73: *Pres.*—JAMES C. OWEN of Brentwood. *Vice-Pres.*—J. R. Spitler of Edgefield. *Sec. and Treas.*—W. E. Ladd of Brentwood. *Cor. Sec.*—J. W. Crocker of Nashville. This Society meets in the Farmers' Club Rooms, Nashville, the second Saturday in each month.

Vermont Dairymen's Ass'n. The officers elect for 1872-3 are: *Pres.*—E. D. MASON, Richmond. *Vice-Prest's.*—C. Horace Hubbard, Springfield, and Charles S. McAllister, Endsburgh. *Sec. and Treas.*—O. S. Bliss.

The Conn. State Poultry Society will hold their next Exhibition in New Haven, in the new Masonic Temple, opposite the Railroad Depot, Dec. 10th to 12th.—EZRA B. DIBBLE, *Cor. Sec'y.*

The Northwestern Dairymen's Association holds its annual meeting at Whitewater, Wis., Jan. 21, 22 and 23, 1873. *Pres.*—S. FAVILLE, Lake Mills, Wis. *Sec.*—G. E. Morrow, Madison, Wis.

Maine Pomological Society.—The subject of reorganizing or regenerating the Maine Pomological Society is agitated. That State has at present no such organization.

The Massachusetts Poultry Ass'n is to hold an Exhibition at the Music Hall, Boston, Jan. 13-17, 1873.

A Poultry Exhibition is to be held at Detroit, Mich., Dec. 17-23, 1872.

FASHIONS FOR WINTER.

1170—GODIVA. This Polonaise is one of the latest Paris novelties. It contains many new and very valuable features. Without looping, it can be worn as a long, sweeping basque, or looped (as shown in cut), it is a most elegant polonaise. The ornamental black plaque pastes over the shoulder, and forms a most dressy cape to coat, and is adjustable, so may be worn as a fancy dress, thus constituting two entirely different Polonaises in appearance. The back piece is sometimes made in velvet or satin, and richly trimmed and complete a brilliant toilet when worn with a basque dress. Besides its beautiful variations, it is well adapted to any material. Take 8 ¼ yards of seventy-two-inch goods. Price of pattern, with cloth model, ONE DOLLAR. See GRAND PREMIUM below.

1133—DOLMA CLOAK. Needs no lengthy description to win universal favor. For comfort, neatness, and elegance combined, its equal is not to be found among the novelties of this winter's productions. Takes two and a half yards double-fold ladies' cloth. Pattern, with cloth model, 60 cents.

84—LA PIERRE OVERSKIRT. The most attractive and elegant style for making, in all kinds of material. And though for a season Polona.se have reigned, yet a spirit of *change* is quite evident, and we gladly accept this beautiful novelty which will gratify the wishes of thousands who desired to see overskirts again in high favor. Takes three yards thirty-inch goods. Pattern, with cloth model, 60 cents.

The above engravings are taken from the **BEST** Fashion Magazine **IN THE WORLD!** It is the New York City Ladies' **AUTHORITY** in all matters of **STYLE** and Dressmaking, and the **ONLY** publication in this country that **IMPORTS** Fashions and **SELLS** paper patterns of them. It gives full information upon every point in Style, besides minute instructions in making all kinds of garments.

This number contains a large fashion plate 11 by 22 inches, **STORIES, HINTS,** Criticisms, Foreign News, &c.

A GIFT
WORTHY of a ROTHSCHILD,

Is Brown's Shaksperian Almanac for 1873. It fairly glows with quotations and illustrations from the "Bard of Avon," and from top to toe is man's life illustrated. I shall print two million copies or more, and being desirous of making the distribution of them as rapid as possible, I will send ten or fifteen copies free, pre-paid, to any one who will judiciously dispose of them in their locality. Address

Dr. O. PHELPS BROWN,
No. 21 Grand Street, Jersey City, N. J.

"THE CHRISTIAN GRACES." | FAITH, HOPE, CHARITY.

"And now abideth Faith, Hope and Charity; these three, but the greatest of these is Charity."

It is a long time since anything has appeared in Christian art so lovely and so exquisite in design and execution as this elegant steel engraving "THE CHRISTIAN GRACES." The grouping of the figures is graceful beyond conception, and the faces of such rare and heavenly beauty, that it seems as if the artist must have seen them in a vision. Every subscriber to "ARTHUR'S HOME MAGAZINE" for 1873 will receive a copy of this splendid $5 picture FREE. Price of Home Magazine, $2.50 a year. Specimen copy of Magazine 15 cents.

LOCAL AGENTS WANTED everywhere to get subscribers for our beautiful Magazine, so well known for the last twenty-five years, and so great a favorite with the people. Intelligent men and women can make large commissions. Send for agents' confidential circular. You can hardly show "The Christian Graces," to any person of taste and fine religious feelings, without getting a subscriber. No disappointment about prompt delivery of pictures, as we have made ample arrangements for their rapid production. **T. S. ARTHUR & SON,**
809 & 811 Chestnut St., Philadelphia, Pa.

OBITUARY.

JOHN G. WILLIAMS, who has been connected with the RURAL NEW-YORKER for nearly fifteen years past, departed this life, in Rochester, on Sunday morning, Nov. 10, (after a protracted illness of fever,) aged 67 years.

This announcement will cause pain to thousands of RURAL readers, and especially those who have been wont to transact business at its Rochester Office, and thus came to know and esteem the genial, kind, true and faithful man whose death so many now sincerely mourn. Our own relations with deceased were such that we feel the loss keenly—for, knowing him long and well, we could but regard him with esteem and veneration. He was not only "an honest man, the noblest work of GOD," but faithful and exemplary in all the relations of life. May he rest in peace, and may we meet "over there."

Deceased was born in Deerfield, Mass., Aug. 13, 1805, where his remains were consigned to the grave, surrounded by relatives and friends, on Tuesday week. He was the father of SAMUEL B. and J. B. WILLIAMS of Rochester, Mrs. Dr. BARNES (known to our readers as "Kate Cameron") of Chicago, and Miss LAURA H. WILLIAMS. Deceased was of the best New England stock—a direct descendant of ROGER WILLIAMS, and also of DAVID WILLIAMS, one of the captors of ANDRE.

A LESSON IN GEOGRAPHY.

IN conversation with a friend, recently, the subject of teaching geography came up. Our friend had been a school teacher in his earlier days, and afterward a civil engineer; and he had thus been in positions to know how difficult a thing it is to make people—old or young—understand, by a mere map, the relative positions of points on the earth's surface when those points are far apart. He said that to dozens of well-educated men—one of them President of a Geographical Society, and two of them Presidents of Colleges—he had made a statement involving such relative positions, which seemed to them so incredible that he had sometimes to verify it on the spot. We naturally felt much curiosity to know what the statement was, and confess ourselves much surprised on hearing it made; and upon finding it verified, we quite agree with our friend that no school in which geography is taught, and no public or private library, should be without a good terrestrial globe. And now for the statement:

"The shortest line that can be drawn on the earth's surface, one end of which line is at the mouth of the Rio Grande, on the Gulf of Mexico, and the other end at Pekin, in China, will cross Behring's Strait."

Let any doubter take a good terrestrial globe—the larger the better—and he can with a thread at once convince himself of the truth of the statement—a truth that may be of far greater value than we now know.

When Alaska comes to be scientifically explored we may find *seeming* obstacles to fade away under the application of the engineer's level, as they have in so many other cases. One such instance we are tempted to relate. When JACKSON was President he proposed to make an aqueduct from the Great Falls of the Potomac to Washington. Now, the canal which follows the Potomac had been made from the Great Falls to Georgetown, at enormous cost of blasting out rock, and it was *assumed* that an enormous expense of the same kind would be necessary to make room for the aqueduct; and so the matter rested until, in President FILLMORE'S time, somebody had the good sense to say, "Suppose we try the Level upon it"—and *then* the level was tried. The result was that an exceedingly favorable route was found, high above and far away from the dreaded rocks.

Within a few short years we have seen ASA WHITNEY ridiculed for proposing and advocating a railway to the Pacific—have seen such a railway built—and, sad to say, have seen WHITNEY almost utterly forgotten by the public. We do not expect to see a railway from some point on our Pacific Road to Behring's Strait, but such a road will in time be needed, as time becomes more valuable to commercial men; and this value must increase in a like ratio to the increase of commerce—each urging the other.

We justly feel proud of achieving the Pacific Road. Considering the cost of labor by Americans, it was a huge undertaking. But when compared with works constructed thousands of years ago, in South America and China, with cheap labor, the Pacific Road is a mere cow-path.

What say you, Gentlemen?—shall we begin the Pekin and Denver Road at its Asiatic terminus—and so let the road bring along the labor which is to build it?

EFFECTS OF THE HORSE DISEASE.

ONE of the effects of the horse epizootic is to attract the attention of owners and breeders of domestic animals to the importance of a knowledge of veterinary science—or to the fact that specialists having this knowledge and knowing how to apply it and save property thus endangered, are necessary. This department of science will attract the attention of both the managers of and pupils attending our agricultural schools. With the advance of civilization and the demands upon, and for, the services, in one form or another, of our domestic animals, appear to come new and increasing and more complex diseases. These seem to correspond in no small degree to those which prevail in the human system—for to a considerable extent the habits and daily treatment of animals correspond to the artificial life of our population.

We have before suggested, in these columns, that in the rural districts the physician should combine a knowledge of the diseases of animals, and their scientific treatment, with his knowledge of and skill in treating the diseases of men and women. The young physician who acts upon this hint, and qualifies himself for such service and makes known his ability and disposition to save the lives of all animals, will thank us for this suggestion. As we have said before, the times are ripe for the recognition of such ability to do such service.

One other effect of this sweeping affliction of horseflesh and depreciation of this class of property, is to cause charlatans to spring up into notice like mushrooms in a meadow; quacks of all sorts and degrees of pretension and dishonesty now see opportunity to "feather their nests." Nostrums of all sorts adapted (said to be) to the prevention and cure of all the ills of the whole animal creation will be advertised and forced upon the attention of the breeder and owner of animals. His own ignorance of the nature of the diseases afflicting his studs and herds, together with his desire to save his property, will make him the more credulous and enable the medicine-maker to pluck his purse from his pocket with the greater facility. Here, then, is the need of caution. Here, again, he had better apply to his family physician for advice, both as to the medicine he should buy and the mode of applying it even to his horse, cow, or pig.

We caution our readers against the sharks who will thus seek to swallow their substance. We urge the purchase and study of the best books relating to animal diseases. It is better than talking politics these Winter evenings. An hour a day during the three Winter months, six days in a week, or say twenty-four days in a month, will give you twelve days' study of six hours each, in which a vast deal of information can be obtained to guide you in this work of protecting yourself both from loss of property and the impositions of pretenders.

Since writing the foregoing we have talked with "Daily Rural Life" on the subject, and he gives us an example so pertinently illustrating what we have said above, that we give it here. A young physician who has recently moved into his neighborhood, was sent for by a family to attend a sick pet cat—one that was a great favorite in the family. The summons came with an apology for seeking his services for such a purpose, but with the plea of great attachment to the cat as an excuse. The young physician did not need any apology, hastened to the aid of the feline patient, and cured it. This is one instance of the eclectic character of his practice. His fame is noised abroad through the neighborhood; his readiness to apply his skill and give his service in any form when it can be made of use, is widely advertised, and the dignified old fogies who sneer at him as a "cat doctor," etc., are finding their occupations gone! This young physician exhibits a kind of practical philosophy which will win him success.

RURAL NOTES AND QUERIES

Canning Fruit at Benton Harbor, Mich.—This place is right across Lake Michigan from Chicago, and forms a portion of what is known as the St. Joseph fruit region, being occupied with as live a lot of men as can be found in any fruit growing district on the continent. It is excellently adapted to the growth of all fruits, nearly native to the temperate zone. It has, until the past year, had no means of utilizing its surplus fruits; now we find the following statement concerning its canning experiments: "The Benton Harbor Packing Company, in the first year of its existence, has put up the astonishing amount of 400,000 cans of fruit. Of these 30,000 are strawberries, 175,000 peaches, 120,000 tomatoes, 75,000 corn. But 65 cans of raspberries were put up, and no blackberries. The company have already disposed of nearly the whole amount at high figures. Next year they intend to triple their force and drive the business to the utmost extent. The Excelsior Company, also located here, has about half the capacity of the above."

Improvements in Central Park.—WM. ROBINSON, editor of the London Garden, says, in his journal:—We are sorry to learn from the New York Tribune that "Professor DENKER," who appears to have charge of the landscape gardening in the Central Park, has improved upon the Parisian style of contrasting colors in flowers, by restoring those whimsically-shaped parterres which were so greatly the fashion a hundred years ago. There are parterres shaped like butterflies, Maltese crosses, true-lovers' knots, baskets, dragons, lizards, and others of nondescript appearance. From what we saw of the magnificent public parks in America, we had been led to hope that they at least would not be violated by barbarous puerilities.

The American Institute Fair closed Nov. 20. It is reported that it has not been so successful as previous years. It was certainly not so good an exhibition of the products of industry as we have seen at previous Fairs. Various causes are assigned, to us, for this depreciation—some of them not complimentary to the management. We apprehend, however, that it is due to the fact that people are satiated with Fairs, and that exhibitors do not find it pays *them* to contribute to a show which puts money in the American Institute's treasury. We wish they did find that it pays; for fairs are educators.

Chinese Farming in Arkansas.—The Memphis Appeal gives an account of the success of five Chinamen who hired one hundred acres of land near that city in Arkansas, of which sixty were cultivated in cotton, and forty in corn. They plowed the ground seven times before planting, and their crops and fence corners are as clear of weeds and grass as the best kept garden. Any amount of land is now at the service of these people for rent, if they desire it. They have enjoyed excellent health in districts where white laborers would be sick from swamp miasma. Their clean cotton is admired in Memphis by dealers.

The Land Sales of the Union Pacific Railroad Company for the month of October, 1872, were 20,657 acres—amounting to $92,879, at an average of $4.50 per acre. The total sales from July 28, 1869, to the present date are 649,051 acres, amounting to $2,757,309, at an average of $4.25 per acre. There were 140 purchasers in October, 1872—average to each 148 acres. So reports Mr. Land Commissioner DAVIS.

BUSINESS INFORMATION.

It Will be Seen by their advertisement in our columns that the great music store of OLIVER DITSON & CO., Boston, although exactly on the edge of the burnt district, entirely escaped injury. This is good news, as their books are used everywhere, and the musical and reading public would quickly miss them if the issue were delayed. It is also a periodical pleasure to read O. D. & Co's rapidly shifting advertisements, which keep us well posted as to what is the standard music of the day.

Chesapeake and Ohio Railroad.—The latest advices from the track-laying forces of the Chesapeake and Ohio Railroad Co., state that there remain less than thirty-four miles to be laid to close the gap between the Eastern and Western sections. The whole line from Richmond to the Ohio will, without doubt, be ready for the passage of the trains by the opening of the new year.

Sale of Poultry.—We call attention to notice of sale of Poultry, by JOHN S. CLARK, in another column.

THE SEASON, CROPS, PRICES, ETC.

Tonica, La Salle Co., Ill., Nov. 8.—Corn is worth but 15c. per bushel, and oats only 12½c. It will not do to take many newspapers with grain bringing such prices.—J. W. T.

Bailey, Riley Co., Kansas, Nov. 10.—We are having nice weather to gather corn, which is a heavy crop. Spring wheat, oats and barley, average crop. Fall wheat was a failure; there is a large breadth grown this fall; looks well. Homesteads can be bought from $500 to $2,000 per 100 acres. This is a good country.—J. A. C.

Dunlap, Iowa, Nov. 8.—We have had a very fine Autumn, so far; one week of rain, lately; the ground is wet down for five feet. Corn is good, and other crops usually good. Wheat is 75c.; oats, 15c.; corn, 22c.; barley, 35c.; potatoes, 20c.; hired help, $20 to $25, and scarce; can hardly find any help; can't you send out some of those people in your city who have no business (or next to none) to come here and help us, and so help themselves? There is plenty of good land lying idle for want of plows; land at from $250 to $10.—R. B. R.

RURAL BREVITIES.

A "RURAL READER" asks some one to tell how to remove hair from the neck without injuring the skin.

BOSTON agents are buying hay in Maine, and chopping it before pressing and shipping it. They pay $13 to $15 per ton for it.

WASHING dirty linen is legitimate business, always; but washing it in the public's drawing room is not legitimate.

A STATE Grange of Patrons of Husbandry has been organized in South Carolina, at which eighty-two subordinate Granges were represented.

ITALIANS are in California to purchase silk cocoons, the silk of which they propose to reel and send home. They do not offer large prices.

GEORGE MERRITT is informed that we know nothing more of the enterprise he speaks of than he does himself.

THE University of Vermont admits young women to all the courses in the Academic and Scientific departments of the University upon the same conditions as young men.

CHAS. S. SARGENT, whose butter brings the highest price of any sold in America, and who is equally successful in growing azaleas, has been appointed Professor of Horticulture in Bussy Institution, the "farm school" of Harvard University.

PUBLISHER'S NOTICES.

TO EVERY READER!

HINTS, REQUESTS, SUGGESTIONS, ETC.

See Our New Premium List in last number, page 319.

Send for the Documents!—Our new Show-Bill, Supplement, Prospectus, &c., are *now ready* and will be sent *free and post-paid* to all applicants disposed to form clubs. Send for and use the documents!

"Progress and Improvement."—MOORE'S RURAL for 1873 will be better than ever before, in both CONTENTS AND STYLE. It will appear in a NEW DRESS of Clear and Beautiful Copper-Faced Type, and present other **Decided Improvements.** Agents and subscribers will please note this, and if they tell their friends, so much the better.

The Premium Picture is sent to All who pay $2.50 for a copy of the RURAL one year, and *not to those who only pay the club rate.* Club subscribers can secure the Engraving, however, by adding 50 cts. to the usual club price ($2.) Don't forget this.

Begin Clubs Now!—And to all who want the paper from date, or either one year (at $2.50) or 15 months (at $3) from Oct. 1, we will send the paper accordingly, with Premium Engraving post-paid. The whole club can start at one time, or part Jan. 1st and part earlier. Note this fact.

The Campaign Opened!—Many Agents have already opened the RURAL Campaign for 1873, while hosts are sending for Specimens, &c., probably with the view of starting on Election Day (a good time, by the way,) or soon after. All right, friends!—That's the way to win Premiums easy.

Attention, Officers of the Rural Brigade!—All Rural Recruiters are Richly Rewarded—vide offer to Club Agents—and there is "ample room and verge enough" for thousands of new recruiters (club agents) to aid in swelling the ranks of the good old RURAL BRIGADE. Our bounties to both officers (Agents) and privates (Subscribers) are most liberal—for every one of the former who gets up a club receives a Valuable Premium, and each of the latter a $5 Picture! Recruiting and Enlisting Papers sent free to all applicants. Why not send for them at once and open the Campaign?

BUSINESS NOTICES.

HORSE EPIDEMIC.

A PHYSICIAN in a communication to a Buffalo paper about the Horse Epidemic, says:—"Externally I used and would recommend Dr. Trask's Magnetic Ointment to the throat, around the ears and on the forehead. This ointment contains tobacco and lobelia, and operates upon the mucous glands of the head and throat by causing an increased flow of secretion from them, at the same time by its relaxing effect removing the stricture and giving almost instant relief to the cough and breathing." It is kept by all Druggists.

THE WAKEFIELD EARTH CLOSET.

The Traveler.

OUR EUROPEAN LETTER.

PARIS, Oct. 30, 1872.

IT has rained and rained for the last month, so that among the voyagers there has been one continual growl. However, an Englishman says the October weather in England has been "perfectly beastly," which is rather more severe than one could conscientiously apply to France. Nevertheless, with all the rain and cold, we have had portions of days that were "perfectly lovely;" the air balmy as Spring, the flowers in the gardens—and gardens are everywhere—are more gorgeous even than in midsummer, with their blooms of Fuchsias, Asters, Marigolds and Dahlias. Everybody goes about quite the same in rain as shine, so that one falls into the mood of thinking that the rain is merely a mental hallucination, and that real *bona fide* storms never frown upon this city which nearly everybody pronounces so bright and gay.

November is signalized as being the month when the Parisians begin to enjoy the luxury of fires; and fire *is* a luxury in Paris. An armful of wood costs a dollar, with the kindlings, and the kindlings are pine cones and little bundles of dry twigs or brush. Cones kindle a fire beautifully, and as they abound plentifully in American forests, it is a matter for surprise that they are not more generally utilized.

Amusements.

Even on these autumnal evenings, the boulevards, the Champs Elysees, and popular places of resort are alive with promenaders, and the cafes thronged to the curb-stones with people gossipping over their beer and coffee, sitting around small round tables. The day closes at midnight, and scarcely begins the next day until noon. Self-entertainment seems a foreign resort; people of leisure go to the theater every night in the week perhaps; between the acts of the play they rush out on the balconies, in the galleries, into the streets, inhale the fresh air, take beer or coffee, and return for the continuance of the play. Many of the finest plays and concerts take place on Sunday, which is a great temptation to the orthodox Americans. I know a French lady here who is an ardent Protestant, who thinks it so queer that American Protestants do not go to the theater, play cards, etc., on the Sabbath. She enjoys her Sunday evening game of cards as much as her trans-Atlantic sister her prayer-meeting. But then, there is no such thing as genuine religion in France, according to our own standard of piety.

The Widows.

A woman loses her husband; she goes about with her priest among her friends, collecting money to build a little chapel over his grave, she spends her evenings embroidering curtains in black and gray, to put in the chapel, in which she and her children will go and kneel and say prayers for the dead. If her grief be only moderate, she will hang in the tomb a wreath of black beads; if she is greatly desolated, she will buy three or four wreaths, with the addition of others in dyed immortelles! When her grief begins to abate, she will buy another wreath in black and white; and her religion manifests itself in a fashion similar to her grief.

The Communists.

However, there are exceptions to all assertions, and of them, upon this subject, is the modest work being done in the outskirts of Paris, for the wives and daughters of the executed and imprisoned Communists. A noble-hearted French woman has opened an industrial school for them, where they learn sewing, reading and singing, and where they learn something of the Great Master of Peace. They lost everything during the siege; their furniture was burned as fuel; their passions made havoc with their physical as well as moral condition; they became outcasts, and now find themselves without the pale almost of sympathy. This philanthropic woman, who has undertaken their regeneration, encounters great financial difficulty. An appeal to men of large wealth results in the donation of but five or ten francs! Reverting to the Sunday question again, it is frequently observed that

The Parisian Sunday of To-Day

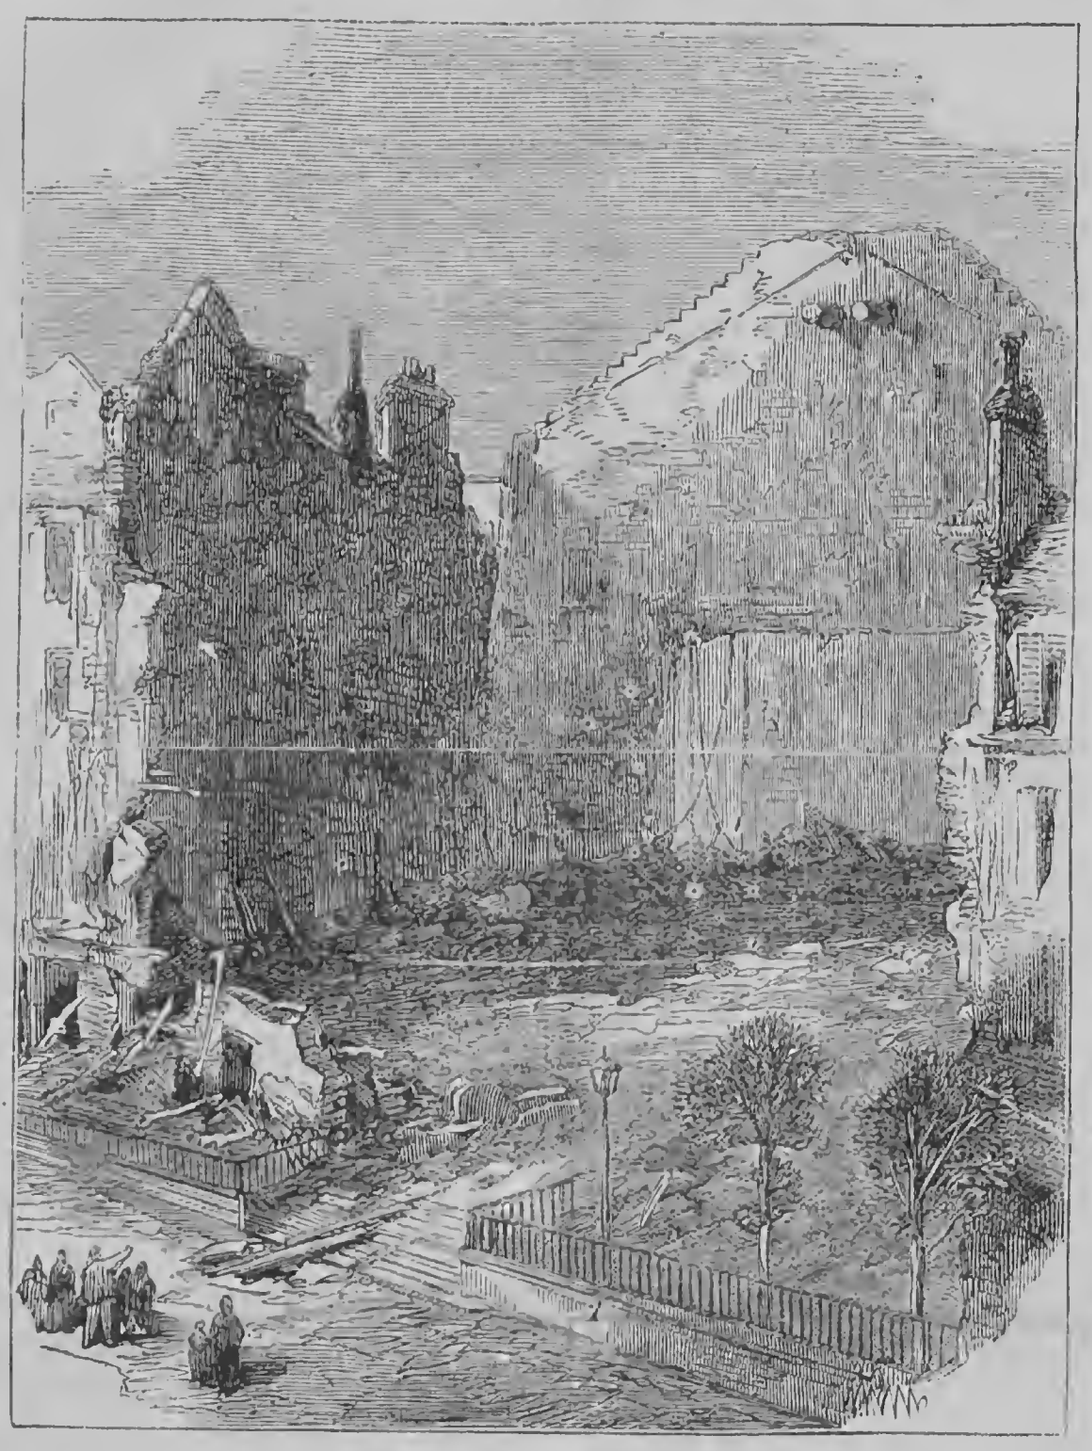
is a vast improvement upon the Sunday of five or ten years ago; that twice as many shops are closed now as then; and one lady, in my hearing, remarked that she thought if the English and Americans, of whom there are thousands in Paris, would observe their home customs here with precision, the orthodox observances of the day would constantly increase and finally triumph.

Pere Hyacinthe Loyson

with his American wife are settled here in apartments in Avenue Neuilly. He is soon to begin preaching again, and will open an "independent" church. A French Catholic gentleman denounces him as an ambitious man, as was LUTHER (!), but that his violation of the laws of the Romish church in marrying, instead of producing the effect he desired and anticipated, has been scarcely noticed or commented upon by the Catholics, and that no one has for a moment been tempted to follow his example. I am told, however, by a reliable person, that soon after PERE HYACINTHE returned to Paris, a Priest called upon him, with a lady at his side, avowing that he had loved her for fifteen years, and intended soon to imitate the example he (LOYSON) had so bravely established. As the handsome, talented HYACINTHE, belonged to the order of the Capucine monks, who had their heads shaved and went barefooted, he must find the delight and comfort of love and home a thousand times more in sympathy with the feeling of true service and worship than the hard and colorless life of his earlier manhood. The one thing over and above all others which has impressed me is

The Tomb of Napoleon.

It is one of the few inanimate things made by man which possesses something of the power of



THEATER OF THE PORTE ST. MARTIN.

nature without being in any degree natural. The pictures one may have seen of it convey no adequate idea of its grandeur and magnificence. They breathe nothing of the spirit of homage and devotion that crowds of people from all lands are constantly bringing to that shrine of worldly greatness. The tomb itself is a marble chapel, of marvelous elegance and richness, opening out of which are a series of smaller chapels, in one of which is the crypt of a brother of NAPOLEON'S. In the center of the main chapel is the inclosure of the Emperor's tomb The inclosure is circular in shape, twenty-five or thirty feet in diameter, and surrounded by a marble railing, over which one bends in looking down upon the tomb several feet below. The crypt itself is of polished Finland sandstone of a dark red color, and flowers, fresh or faded, lie upon it.

Angelic figures in partial relief stand out from the inclosing wall; the names of battles won are inlaid in the floor in a circle about the crypt; battle flags are also draped about. One half fancies, for a moment, that the warrior will break the bonds which bind him, and, leaping into life, fire the heart of France with his own wonderful genius, and crown her again with what she has not had since he died—a great leader. I always feel some twinges of conscience whenever I find myself becoming enthusiastic over, or feeling a reverence for, a man whose ruling motive was conquest, and the fruit of whose endeavors was anguish and bloodshed. To be a great soldier should be accounted no greatness, save when he fights for the sacred cause of human rights; and in that, he who wins a noble cause in a bloodless way, is the greater. But NAPOLEON'S name possesses an indescribable magic. The very bridges and arches he built seemed imbued with the victorious magnificence of his genius. There is

A Painting in the Louvre

illustrative of the scene where he visited the plague hospital in the East. He is the central figure, arrayed in the splendid costume he loved to wear when leading his army. Drawing his glove from his shapely hand, he touches with his fingers the plague spot of a stricken man; and one cannot but think that the touch will heal and restore. All about are groups of stricken men; some in the final moments of life, lifting themselves, painfully, to look upon the kingly face and—live! But, with all his greatness, no single deed of his equalled the heroic sacrifice of JOSEPHINE, when, with her own hand, she put away from her heart her life's devotion. I know of no other manifestation of a love so utterly grand as to be so utterly unselfish in the lives of women. A man would be simply incapable of it. The French possessed the spirit of sentiment enough to unite ABELARD and HELOISE in death; perhaps in some later day the tomb of the Emperor will become that of NAPOLEON and JOSEPHINE, for his heart must have ached to the last with the regret of that one fatal ambition. I think

Another Raid from the Prussians

and outburst from the Communne rabble, would make the glories of France like those of Greece—things of the past. I went to Saint Cloud the other day, and saw the ruins of the palace, the defaced carvings, the broken statues, and the almost complete devastations of those "barbarous Germans." The silent fountains, the grass-grown walks, the neglected gardens, were anything but harmonizing with a joyous mood. If I were French, I think I should "burst with indignation" actually. With the destruction of the enemy on one side and the worse than destruction by my own countrymen on the other. That state of affairs does not even leave one the consolation of a patriotic outcry against the invaders. However, there might have been a worse destruction than that of the Tuileries. A nation lifted to Republicanism has little need perhaps of royal toggery or princely halls. But it was immense in size, magnificent in design, and would have made an admirable university for girls. The name Tuileries came from the place on which the palace was erected—tiles (tuile) having been manufactured there.

A Daily Place of Resort

in Paris is the Exposition held in the Palace of Industry, in which the Exposition Universelle was held in 1862. It is very similar to the Fairs annually held by the American Institute in New York. The music, however, is more attractive, a vocal concert being given every day in which men and women both take part.

The French Assembly opens in a few days at Versailles, the French being too suspicious of themselves to again assemble in the Legislative Hall in Paris, the steps of which are moss-grown. The Assembly is composed of seven or eight hundred members, and no spectator is admitted without a ticket, and that, too, obtained with difficulty. MARY A. E. WAGER.

WOMEN AT EUROPEAN GAMING TABLES.

A CORRESPONDENT of the Pall Mall Gazette says:—"Time was when, if you saw one of them regularly seated at the tables, you could pronounce off-hand on her character with little danger of doing her injustice. ANONYMA risked her rouleaux when out for her summer tour, or some fallen BECKY SHARPE came down in faded finery from her garret to try and double the florin or two she had obtained from doubtful charity. Now every one seems to make their game, the women as freely and boldly as the men. They may not stake so heavily as Jewish bankers from Frankfort, Russian princes, Magyar boyards, or Mediterranean mongrels, and *pour cause;* but they play out to the limits of their tether, and after their tether appears to be a pretty long one. It is not a case of borrowing a florin or two from husband, father, or brother, throwing them endways on to the cloth, blushing to the roots of the hair as, seeing them roll about, they explain to the croupiers where they desire to place them, and finally showing white teeth and dimples when the stakes were swept up by the remorseless rake. Not at all. Nowadays the English maid or matron draws in her chair in most business-like fashion, smilingly receiving the cards to cut from a gentleman with the brand of the galleys on his features, and possibly the mark of the chain on his ankle. On the other side she rubs shoulders with a lady much better known than respected in the Parisian dancing saloons, and about whose vocation, indeed, there could be no manner of doubt, even if she did not *afficher* it by a costume excessively *decolletee* and a tawdry blaze of Palais Royal jewelry. Not that in her gorgeous show she has greatly the disadvantage of her English neighbor. Except that the jewels of the one are real, and those of the other sham—that the chains of "respectability" are gold, while those of disreputability are mosaic—the pair might be intimates if not sisters. Possibly a week or so may bring them yet nearer an identity, when the couple of ladies have established a play-table intimacy, and the English jewels have gone to the mont-de-piete. For in the frankness of the excitement of winning and losing as the game goes on, the Englishwoman exchanges congratulations and condolences, or holds counsel with her neighbors, and so the intimacy warms fast. The young matrons may show themselves the more easy at first, on the strength of their matronhood; but in the greater exuberance of their girlish spirits, the maids soon make up for lost time when once they are fairly intoxicated with the excitement. The intoxication is kept up, for when their impressionable natures have been steeped in the spirit of the game they can never keep themselves away from the tables. There they are the first thing in the morning, when the great professional players, worn with long years of dissipation, are still trifling over their breakfast. There they are, the last thing at night, scrambling for Napoleons with fingers sparkling with rings, among all the rascality and roguery of Europe."

"GREAT CIRCLE" TRAVEL.

IT is not known by everybody, though perhaps most people have been told of it several times, that, for all purposes of navigation, Puget Sound is nearer the great Asiatic marts than San Francisco. Even if the vessels going out from the Golden Gate took their course direct for Hong Kong or Shanghai, they would, by reason of the longer degree of latitude further south, scarcely have less sailing than by bending round more to the north. But, in point of fact, the prevailing winds and ocean currents of the Pacific are such that vessels from Asia find their most eligible route bringing them within fifty miles of the entrance to Puget Sound; thus making by the Northern Pacific, when completed, a saving of nearly a thousand miles of ocean navigation. This, added to the diminution of distance overland already alluded to, gives us a route from our Eastern cities to the coast of Asia shorter than any other by about fifteen hundred miles. When this road shall be in successful operation, the time required to reach the Pacific Coast by means of it from New York City will not exceed about four days, allowing an average rate of movement of thirty miles an hour. Thence to Shanghai, in China, the voyage will occupy eighteen to nineteen days, at the mean rate of twelve miles an hour; making twenty-two to twenty-three days in all from New York—a less time than is now used in making the voyage by the way of the Isthmus to San Francisco.

PREVENTING GERMAN EMIGRATION.

SOME time ago we stated the fact that the German Government had threatened emigrating Germans, proclaiming that they would be treated as outlaws. Still, the young men of Germany were willing to be so treated if they could once get to the United States where they may become citizens. Now the Imperial Government, attempts to check the outflowing stream of emigration by compelling the German railway companies to charge emigrants full fares for person and baggage over their respective roads. Hitherto these companies have favored emigrants by reduced rates of fare. But emigration will not cease. The German will leave more money in the hands of the railway companies, but this action of the Government of his country will but increase his desire and effort to get out of it.

MR. JENNINGS of the Times has gone on a Western tour.

SPARED.

BY CHARLOTTE N. CORDNER.

LOVE you, *beloved?* 'tis because I love
That I don't crush you
Till each fringed stem of your sweet nature
Dies o'er its exhaled perfume.
Love you—beloved? *No*—not as man *often* loves,
Whose hungry passions lead him,
But as a GOD who spares, though *starving*
For the food which tempts,
Rather than have the blight and desolation
Of one pointed finger
Mar the grand anthem of thy life
With hateful discords.
Myriads of syrens tempt me in thy voice—
I turn my ears away.
Buds blossom as I gaze; I will not pick—
For then—I slay.
Drink?—methinks I might;—but fires would burn
Each fountain dry
E'er thirst like mine had grown replete.
And then, such ashy crypts
Of smoldering memories, perhaps,
Might haunt thee!
Love thee, *beloved?*—Bow thy head
Whene'er again thou doubtest—
And pray for faith;
For as a GOD *I love*, and *loving*, SPARE!

Our Story-Teller.

LITTLE BLUE EYES.

"CAN I sit with you?"
"Certainly, sir."
"Nice weather?"
"Splendid, indeed."
"Crops growing finely?"
"Yes—couldn't do better."

I was sitting in a passenger coach, on a Wisconsin railroad, one day, years ago, when a good-looking, pleasant-spoken man came along, stopped at my seat, and the above conversation took place, the latter part of it after I had given him part of my seat.

Now, I am regarded as a sociable man. I like a joke, a good hit; and I think a sour, morose man, who uses his tongue only when forced to, is bound to die of some terrible disease, and go to some place of red-hot punishment.

On entering a railroad car I always look about for a talkative man, and then I get as close to him as possible and drain him dry, if the journey is long enough.

And I want to state one thing more: Left an orphan before I could realize the sad event which made me one, I got kicked here and cuffed there, and "grew up between folks," as they say. I ought to have had, at the time of which I write, a pretty thorough knowledge of human nature, and have been enabled to read evil in a man's face, if he intended me evil. I did not pride myself on being over-keen or extra sharp, but the knocking around among strangers ought to have given any one a good experience.

Well, the stranger and I fell into an easy train of conversation as we rode together, and in ten minutes I began to enjoy his company. He was a well-made fellow, finely dressed, and he wore a fine watch and a simon-pure diamond ring. I never saw a man who could talk so easy and pleasantly. It seemed that he had but to open his mouth, and the words fell right out.

I had traveled in the South, so had he. I had heard the loud roar of the Pacific, he knew all about it. I had been up in a balloon, down in a mine, been blown up, smashed up and repaired again and again, my new friend had experienced all these things, and was wishing for something of a more startling nature. We agreed on politics, neither had any religion, and I had never met such a railroad companion.

Did you ever meet a man, who, though a stranger to you ten minutes before, could wrest from you secrets which you had sworn to yourself not to reveal? Well, he was such a man. It was not long before he commenced asking me questions. He did not seem trying to quiz or draw me out, but he asked me questions in such a sly, roundabout way, that before I knew it I was giving him my history.

I was at that time just on the point of being admitted to the bar of Wisconsin as a student of Law & Law of Brierville. The firm were old lawyers with a lucrative practice, and it had been talked over that in about a month I should be the "Co." of the firm. A year before a farmer named Preston, down about four miles from Grafton, had died, and his matters had been put into the hands of Law & Law for settlement. Preston had died rich. He had money in bank, railroad stock, mortgages, etc., and everything was settled up to the satisfaction of the relict and the fatherless.

About a year before his death, being pinched for money, and not wishing to sell anything at a sacrifice, Preston had given a mortgage on his farm for three thousand dollars. While the papers read "for one year from date," there was a verbal agreement that it should be lifted any day when Preston desired. A month after, when, having the funds to clear off the paper, the old money-bags holding it refused to discharge, wishing to secure his interest for a year.

I was on my way to ascertain the date of expiration. A fire among our office papers had destroyed the memoranda, and I must go down and get the date from old Seip, who lives South of Grafton, about five miles. The stranger had pumped all this out of me in ten minutes, and yet I never once suspected that he was receiving any information.

"I am not positive," I added, "but I am pretty sure that the time is the thirteenth, which would be Tuesday next."

"And then your folks will send down the money and discharge the mortgage, of course," he queried.

"Oh, yes, I shall most likely bring it down," I replied; and it never occurred to me how imprudent I was.

He turned the conversation into other channels, and did not once attempt to pump me further. We got to Grafton at 10:50, and to my great surprise, he announced that he was to stop in the town on business for a few days. I had not asked his name or avocation, while he knew everything about me.

We went to the hotel, had dinner, and then I secured a livery team and drove out, getting through with business, so that I was back to take the 3:20 express east. My friend was on the porch of the hotel as I drove up, carrying that same honest, dignified face.

"Well, did you find out?" he inquired, in his pleasant way.

"Yes; it is on the thirteenth, as I expected," I replied.

We had lunch together, and when we shook hands and parted, I had no more idea of ever meeting him again, than I have of knowing you. In fact, he told me that he should sail for England within a week or ten days, and should not return to America. At parting, he gave me his card. It was a modest piece of pasteboard, and bore the name of "George Raleigh," in old English script.

Everything at the office went on as usual, and the thirteenth came at length. Law & Law had arranged for me to go down with the money, and I looked upon it as a business of no special importance.

"We know you are all right," remarked the senior partner, as I was about to go; "but I want to give you a word of warning, nevertheless. Don't take any stranger into your confidence until you have passed out the money, and look out who sits next to you."

It was something new for him to caution me, and I could not but wonder at it; but in the bustle of getting aboard the train, I forgot what he had said. Ordinary prudence had induced me to place the money, which was all in bank bills, and divided into three packages, under my shirt and next my skin, where the deft hand of a pick-pocket could not reach it.

Interested in a newspaper, time flew by, as the train flew West, and at length the hoarse voice of the brakeman warned me that I had reached Grafton. I had leaped down and was making for the livery stable, when I heard a familiar voice, and looked up to see Raleigh. He was seated in a buggy and had seemingly waited for me to come up.

"Don't express your surprise," he began, as I stopped at the wheel. "I did intend to go away, but I changed my mind, and like this section so well that I am going out to-day to look at a farm, with a view of purchasing. Come, ride up to the hotel."

We rode up, ordered lunch, and while we were discussing it, Mr. Raleigh discovered that the farm he was going to see was just beyond that of old Grip's.

"How fortunate! I could ride out with him, see the farm, return in his company," and he was greatly pleased.

I was also pleased. If any one had told me as we got into the buggy, that George Raleigh meant to return with my money in his pocket and my blood upon his hands, I should have believed him a lunatic. And yet George Raleigh had planned to do that very thing.

It was a lovely day in June, and the cool breeze and the sight of meadows and green groves, made my heart grow larger. My companion was very talkative, but he didn't even hint at my errand. He talked as far away as he could.

"Oh! excuse me!" he exclaimed, after we had passed a mile beyond the village, and were among the farm houses. "I should have offered you this before."

He drew from his pocket a small flask of wine and handed it to me. Now, I was temperate in regard to drinks. In fact I detested the sight and smell of anything intoxicating. But I had not the moral courage to tell him so, and to hand back the flask undisturbed. I feared to offend him, and so I drank, perhaps, three good swallows. He called my attention to the woods on the left, as he received back the flask, and when I looked around again he was just removing it from his mouth, as if he had drank hearty.

In about five minutes I began to feel queer. The fences along the road seemed to grow higher and the trees to grow larger; something got into my ears so that the rattle of the buggy sounded a long way off.

"How strange! why, I believe I am going to be sick!" I exclaimed, holding on to the seat with all my might.

"You do look strange," he replied, a snaky smile stealing over his face; "I should't wonder if it was apoplexy."

I did not suspect the game he had played. His words were like an echo, and his face seemed twice as large as it was. My head began to spin, and my brain to snap and crack, and I was greatly frightened.

"You are bad off," he continued, looking into my face. "I will drive as fast as possible and get a doctor."

My tongue was so heavy that I could not reply. I clutched the seat, shut my eyes, and he put the horse at his best pace. We met a farmer's team, and I can remember that one of the occupants of the wagon called out to know what ailed that man. Raleigh did not reply, but urged the horse forward.

About three miles from Grafton was a long stretch of forest, and this we soon reached. The pain in my head was not so violent, and I was not so badly affected when opening my eyes. I had settled into a sort of a dumb stupor, with a brain so benumbed that I had to say to myself, "This is a tree, that is a stump," etc., before I could make sure that I was not wrong. Half a mile down the road after we struck the forest, and then Raleigh turned the horse into a blind road leading back into the woods. I could not understand what he intended. I tried to grapple with the question, but could not solve it.

"Well, here we are!" exclaimed Raleigh, when we had reached a point forty rods from the main road.

He stopped the horse, got out and hitched him, and then came around to the wheel.

"You don't feel just right, but I guess you will be better soon," he remarked. "Come, let me help you down."

He reached up his arms, and I let go the seat and fell into them. It seemed to me as if I weighed a ton, but he carried me along without an effort, and laid me down within about a rod of a fence which ran along on one side of an old pasture. Just now I began to get a little better. The effects of the drug were wearing off, and I got a faint suspicion that something unusual had happened. But I was powerless to move a limb; the sensation was like that when your foot goes to sleep.

"Can you speak?" inquired Raleigh, bending over me; "because if you can it will save me some trouble. I want to know just where you have stored away that money."

Now I began to realize my situation. His face looked natural again, and the load was off my tongue. I also felt that I could move my fingers a little.

"George Raleigh! are you going to rob me?" I asked, finding my voice at last.

"Well, some folks might call it 'robbing,' but we dress up the term a little by calling it the only correct financial way of equalizing the floating currency, so that each one is provided for and no one left out."

"You shan't have the money. I will die first!" I yelled, rising a little.

"Ah, I see—didn't take quite enough!" he coolly remarked. "Well, I have provided for this."

He went to the buggy, procured ropes and a gag, and kneeled down beside me. I had but little strength yet, and he conquered me in a moment. Lying on my right side, looking toward the fence, he tied my hands behind me and then forced the gag into my mouth.

"There, now! You see you are nicely fixed up, and all because you acted like a fool, instead of a sensible young lawyer soon to be admitted to the bar."

While he was speaking—indeed while he was tying me, I had caught sight of the white face of a little girl looking at us from between the rails of the fence. I could see her great blue eyes, and knew that she was frightened. There were red stains around her mouth and on the little hand resting on the rail, and I knew that she was some farmer's child searching for strawberries. I could not warn her of her danger, and I feared that she would be seen or heard. While Raleigh was tying the last knot, I winked at the little girl as hard as I could, hoping that she would move away. But she did not go.

"Well, now for the money!" said Raleigh, and he began searching my pockets. He went from one to the other, removing all the articles, felt down my boot-leg, and then finally passed his hand over my bosom and found the money.

"Ha! here it is!" he exclaimed, drawing out the packages. "I don't hardly believe that old Grip will see any of this to-day."

He sat down near my head, undid the packages, and was cool enough to go at it to count the money. As he commenced the little girl waved her hand to me. My heart went thumping, for I expected she would utter a word or a shout, but she sank down from sight, and I caught a gleam of her frock as she passed through the grass.

"You see, my young friend," remarked Raleigh, as he drew off one of his boots and deposited some of the bills in it, "there's nothing like transacting business as it should be transacted. Some men would have shot or stabbed you, but it is only the apprentices who do such work. All the real gentlemen of our calling do business as gentlemen should."

He drew off the other boot, and placed some "fifties" and "twenties" in it, and then continued:

"I have it all planned out how to deal with you as soon as I get this money disposed of around my person. I shall lay you on your back and pour the balance of this wine down your throat. There's enough of it to make you sleep until to-morrow night, and by that time I shall be hundreds of miles away. As soon as I see that the drug has taken effect, I shall untie your hands and remove the gag. When you come out of your sleep—if you ever do—you had better crawl out to the road, where you will most likely meet some traveler soon. I want to use the horse and buggy, otherwise I would leave them for you."

How coolly he talked! He treated the matter as if it were a regular transaction in which I fully acquiesced. He had me a fast prisoner, and I felt that he could do just as he pleased. While I was thinking, I saw the little white face appear between the white rails again, but in a moment it faded away, and its place was taken by the sunburned phiz of a farmer. He looked from me to Raleigh and back again, and I winked at him in a way which he readily understood. His face disappeared, and I felt that I should be saved.

"No, old Grip won't get his tin to-day," mused Raleigh, storing away the bills in his pockets. "You will go back to Law & Law feeling put out and cut up; but they shouldn't blame you—it is not your way at all. True, had you minded your business on the car and not been so free with a stranger, this would not have happened. I was on my way to Milwaukee, and had no thought of such rich pickings here."

I saw nothing of the farmer. Raleigh finished his counting, and I made up my mind that the farmer was afraid to interfere, and had run away. My heart went down as Raleigh got up, for I saw that he was about to carry out his plan of further drugging me. He turned me on my back, sat down astride of me, and then pulled out the flask.

"Now, in just about a minute we'll be through with this business," he remarked, trying to put the mouth of the flask between my jaws.

I rolled my head to one side and he did not succeed. He was jamming the flask against my teeth, when I caught the sound of a soft step, the crash of a club, and Raleigh rolled off my body. He tried to leap up, but three or four farmers struck him down, and one of the blows rendered him senseless. Before he came to I was free of ropes and gag, and we had him nicely bound.

Over beyond the pasture a farmer and his hands were raking up hay. "Little Blue Eyes," only eight years old, had wandered off after strawberries, and had fortunately witnessed part of Raleigh's proceedings. She had hurried back to her father and told him that "a man was all tied up out there," and he had returned to the fence. Understanding the situation, he and his men had moved around so as to secure an advantage, and Raleigh's capture was the result.

When the rascal found his senses he was terribly taken aback, and cursed enough for a whole Flanders army. We took him back to Grafton, and when I last saw him he was on his way to the penitentiary to serve a sentence of fifteen years.

The mortgage was lifted after all, and the gift which Law & Law sent little Katie Gray, kept her in dresses for many a year.

SOCIAL SPLINTERS.

COMMODORE GREEN of Savannah, Ga., lately extended hospitalities to the delegation of an agricultural convention. As one member was curiously examining the beautiful collection of statuary which adorns the palatial residence, Mr. Green, who, it seems, was everywhere and with everybody, tapped him on the shoulder and said:—"Ah! Mr. ——, I see you are an admirer of the beautiful; would you not like to inspect some of the fine arts?" "Well," said the delegate, as he deposited a well masticated quid of Virginia weed outside the window, "I don't care if I do, as I am a little dry."

A VERY serious insurrection broke out in Manilla recently. Several priests were concerned in the affair, but the Governor was not to be overawed by them. When a priest went to ask him to spare some prisoners who had been brought in, he answered:—"I know my business; you go and attend to yours. I shall shoot the rebels; you can pray for their souls." This is a new application of "division of labor."

A PARTY of men animatedly engaged in discussing politics before a country store, attracted the attention of an aged agriculturist. "Ther's sumthin' the matter here," he observed to his wife; and, drawing in his team, he lightly shouted to a consumptive individual on the outskirts:—"What's a foot?" "Twelve inches," was the sardonic reply. The aged agriculturist swore some, and drove on.

A CHEMIST'S apprentice, during the performance of the last scene in "Romeo and Juliet," became so excited by the apparent reality of the stage business that he jumped from his seat, dashed his hat over his forehead, and shouting, "Hold him up, Juliet, while I run for the stomach pump!" rushed out of the theater.

ONE of Darwin's strongest arguments in favor of his theory that man is a descendant of the monkey is, that monkeys always part their hair in the middle. It is a noticeable fact, however, that monkeys have quit it since it has become fashionable among certain men.

A TRAVELER asked an emaciated Georgian if the climate of the rice swamps was unhealthy. "Wa'al no," replied the royal native, "'tain't unhealthy; we have the fever and ague all the time in these parts, but then we enjoy a powerful under-tow of health."

AN Indian complained to a rumseller that the price of his liquor was too high. The latter, in justification, said, "that it cost as much to keep a hogshead of brandy as to keep a cow." "Maybe he drink as much water," replied the Indian, "but he no eats so much hay."

A MINISTER not long ago preached from the text, "Be ye therefore steadfast;" but the printer made him expound from "Be ye there for breakfast."

NO man can put his neighbor's hat on the owner's head properly. Did you ever notice it? The owner of the title always replaces it to suit himself.

THE last novelty in sewing machines is one that will follow the thread of an argument.

Ladies' Port-Folio.

MIRIAM CLAIRE.

BY FLOY H. SEWARD.

THE winds, sweeping on in their moaning flow,
Shake the leaves downward upon my hair,
And forms that were lost in the long ago
Come to me now through the scented air;
But oh, the dearest that wanders to me
From the dim aisles of the years agone,
—The gleam of her beautiful hair you see,
As shadows creep to me, one by one.

You would say 'twas the sunshine's dying glow,
—I know, full well, 'tis her amber hair,
And perhaps you think her whisperings low
Are but sighings of the perfumed air;
I know she will come with the twilight gray—
They say she is in her mossy tomb,
But her form is never from me away,
When shadows flit softly through my room.

Ah, MIRIAM CLAIRE! with thy golden hair,
And thy love-lit eyes with their azure gleam!
I hear the low sweep of thy garments rare,
And know 'tis no shade or fevered dream;
For music is thrilling upon the air,
Swept from the harps of that Unseen Land,
And soon I shall meet thee, MIRIAM CLAIRE,
Loveliest One of the Angel Band!

COUNTRY HOMES.

BY LESLIE HOWARD.

THERE are many happy homes scattered all over our land; some are princely abodes in the city; others beautiful suburban residences. But among them all there are none more home-like and peaceful than those quiet farmhouses we find among the green hills and fields of the country; and none seem more appropriately called by that dear word "home."

In them we find the conventionalities of society are laid aside, and there is nothing to disturb the harmony of domestic life. Free from the wearying round of fashion, the wife and mother finds time to devote herself to her children, and, by her example and influence, impress on their minds those principles which will govern their whole after life.

The farmer, too, is happier than are many richer men; for since he can rightfully call his own a portion of GOD'S green earth, he has a feeling of independence and security which many millionaires know nothing of. While the rich man is disturbed by fears that his ships have gone down at sea, that the bank where his gold is stored may break, or his factory burn, the farmer feels secure of what he has, and so goes on serenely with his work; gathering each year the banquets spread by the seasons; extending his broad acres; and by the wealth his honest toil brings him giving his children an education.

So, while living a happy, honest life, the years roll on, until at last he sees his little ones grown up around him, and then he and his wife (his true helpmate) sit down to enjoy the golden harvest of their life.

This is a happy life in truth; but I am speaking of those farmers who spare no pains to make their homes beautiful, and their children happy; and those women who do not let their daily household cares make them grow indifferent to their children.

Too often farmers, through a mistaken sense of duty, will save and hoard every dollar, thinking it is only wealth their children need; so they give them an indifferent education; allow them but few amusements; and by constant restraint make them long to leave home and enter into the outside world. Frequently mothers will allow their daily life to be occupied by the unvarying round of work, work, work! They will attend to the bodily wants of their children, forgetting all the while the cravings of their young souls, until their children grow to see only a careworn, weary woman, whom daily care makes peevish, instead of a fond mother, with loving smile and ready ear.

There are many mothers who complain that their children invariably leave the farmhouse, and turn their footsteps to the city's gay haunts, or enter a life on the wide ocean. They think such conduct ungrateful. But Oh, toil-worn Marthas, is it their fault alone? If their home had been made attractive with books and pictures; if their mother had been with them, their daily friend and companion, encouraging, advising and counselling them; and if they had been allowed to go beyond their native hills and see a little of the great world outside—would they have been so eager to leave their home? No, they would not. But if they did go, it would be with sorrow; and in after life, when they were world-weary men, the memory of these early years spent in a farmhouse, mingled with the loved tones of a mother's voice and the memory of her smile, will come down to them like a long gone, happy dream.

It is a good thing for children to be brought up in the country. They will be happier in the sunshine and free fresh air, surrounded by broad, open fields and shadowy woods, than they would be if shut up in the prison walls of that great brickery we call the city, and compelled to inhale its poisoned atmosphere.

Doubtless, those little ones—pale, hot-house flowers that flourish in the city—are contented enough in their palace-like homes. But whenever I see them in the city streets and parks, daintily dressed and led by a French nurse, I cannot help thinking how much happier and prettier they would be if allowed to roll and tumble about on the green knolls of the country, dressed in simple clothes which they are in no danger of soiling, and with their now pale faces all brown and ruddy.

It is as pleasant for grown folks as for children to live far away from the city's crowded thoroughfares and ceaseless roar, in a home made beautiful by green hills and valleys, the low rippling of water and the song of birds, where at their daily work they can watch the seasons in all their glory come and go.

But it is not nature alone that gives beauty to these farmhouses. Art and culture have lent their graces to make them attractive. The majority of our farmers now build pretty cottages, or wide, handsome mansions, and their wives and daughters make them as beautiful within as nature has made their hills and fields without—beautiful with books, and pictures, and the numberless devices a woman's mind can frame; and beautiful with her softening influence.

Such homes as these are, I doubt not, the happiest in the land; for though our city mansions may surpass them in costly upholstery and fashionable elegance, they cannot boast of the same charm—that nameless something—which makes home, in every sense of the word, a *Home*.

A FATHER'S ADVICE TO A BRIDE.

SAID a young husband whose business speculations were unsuccessful:—"My wife's silver tea-set, the bridal gift of a rich uncle, doomed me to financial ruin. It involved a hundred unexpected expenses, which, in trying to meet, have made me the bankrupt I am." His experience is the experience of many others, who, less wise, do not know what is the goblin of the house, working its destruction. A sagacious father, of great wealth, exceedingly mortified his daughter by ordering it to be printed on her wedding cards—"No presents, except those adapted to an income of $1,000." Said he, "You must not expect to begin life in the style I am able, by many years of labor, to indulge; and I know of nothing which will tempt you to try more than the well-intentioned but pernicious gifts of rich friends." Such advice is timely. If other parents would follow the same plan, many young men would be spared years of incessant toil and anxiety; they would not find themselves on the downward road, because their wives had worn all of their salary, or expended it on the appointments of the house. The fate of the poor man who found a linchpin, and fell himself obliged to make a carriage to fit it, is the fate of the husband who finds his bride in possession of gold and silver valuables, and no large income to support the owner's gold and silver style.—*Exchange.*

WHY AMERICAN WOMEN ARE DELICATE.

Another reason of the delicacy of our women is the far greater style affected by all classes in dress, and the wearing of corsets during early youth. Naturally, if one has attained a full and fine physical development, tight corsets, heavy skirts, close-fitting boots and weighty chignons cannot injure to the same extent as when these appliances of fashion are put upon the soft and yielding muscles of a young and growing girl. The noble ladies of England exercise many hours daily in the open air. They do not disdain to don heavy calf-skin shoes and colored petticoats, in which to perform this duty. This of course would not alone make them as healthy as they are, were not their constitutions strengthened by a proper physical education before they are eighteen years of age, but it suffices to retain them in a good degree of health. Our fair Americans early in the day attire themselves in charming morning costumes, with white skirts, and then they are averse to soiling these by exercise, and the least dampness deters them from a promenade. American ladies think far more of dress and fashion, and spend more money and time on their toilets, than any women in Europe, not even excepting the French, from whom all our fashions come.

As a result of the Illinois Liquor Law the following is said to be common in Illinois papers:—"Notice—All women who do not wish their husbands to frequent my house for the purpose of drinking, will oblige me by leaving a note at the postoffice, box 83. (Signed.)

It is very difficult for a married man to get his "tod" without the following "permit" from his wife:—"Permission is hereby granted by me, the lawful wife of ——, and I declare and witness, by my own signature, that my husband has the perfect right and liberty to drink, and as often as he chooses to drink, and what he chooses to drink, and I hereby relinquish all the claim arising therefrom."

A CLEVELAND, O., paper tells of a female pedestrian who has made a recent visit to that city. She was the mother of four children, varying from two and a half to eleven years of age, all of whom she had with her, the older three on foot and the youngest in her arms. She had walked from Buffalo (all but about twenty-five miles), and is on her way to Memphis, where she hopes to find a brother who will give her and her children a home. She is of Irish descent and possesses all the pluck necessary for the accomplishment of her pedestrian feat, and is determined to keep up her tramp to Memphis if the juvenile walkists can stand it.

Reading for the Young.

GRANDMAMMA'S BIRTHDAY.

THERE are red young lips on a wrinkled cheek,
Counting out grandmamma's birthdays there.
Eighty, the years that the kisses speak—
And now there's a hand on the snowy hair.

"Why! grandmamma, really it seemed to me
I never, never should reach the end;
How awfully tired you must be
To have had the eighty years to spend!"

"So I have been thinking, my little son,
The years seemed never so long before
As when, in counting them one by one,
Your lips touched lovingly at fourscore.

"But God has given me strength for all—
All the way to the eightieth stair;
I'm resting on it, ready to fall
Softly asleep on the breast of Prayer."

[*Charlotte F. Bates, in Our Young Folks.*

EVENING CHATS.

BY UNCLE CHARLES.

What it is to be Brave.

JIMMY came home to-night with his eyes as bright as two stars. I looked into his frank, open face inquiringly, as if I would ask "what has happened now?" He *saw* the questioning look. It is queer, boys, how you and I can sometimes tell what people are going to say before they say it, isn't it? Well, JIMMY knew that I saw he was excited and wanted to know what it meant and he wanted to know what it meant, and he walked up to me in an eager, manly way and said,

"What is it to be brave, Uncle?"

Why do you ask that question?

"Because a gentleman told me I was a brave lad, and I knew that meant something good; but I did not know *exactly* what it meant."

Why did he say that to you?

"Because he asked JOHNNY which road he should take to go to Dr. STEPHENSON'S, and JOHNNY, to be mischievous, told him the wrong road. Just afterwards I came along and JOHNNY told me what he had done, and laughed about it as a good joke. I told him he had done wrong, and I ran after the man and shouted and made him hear and stop and told him he was going wrong—that JOHNNY had misdirected him. Then he turned around and said, 'You're a brave lad, and perhaps you saved another boy's life.' Now, what is it to be brave, Uncle?"

There are many kinds of bravery, my boy. It is, as a rule, a brave thing to do right and a cowardly thing to do wrong. It is brave to do what you believe to be right, although you know your playmates will laugh at you, or think you mean, or avoid you because you spoil their fun. So you spoiled JOHNNY'S fun; but you did him a great kindness; for suppose he should learn hereafter that this sick boy died because he played this trick or told an untruth to this gentleman; he would suffer all his life if he is really as good a boy as I think him; instead of laughing with JOHNNY and enjoying his fun as he probably thought you would, you did a brave thing to so promptly undo the wrong he had done. The gentleman was right to call you a brave lad.

Again, I was passing the school the other day, and I saw three or four boys taunting and sneering and laughing at a playmate because he was not dressed quite as well as they, or because he did not seem to know quite as much; and I saw another boy go up to him, take him by the arm and go off and play with him and try to soothe him because he felt the insults of the other boys. I admired the little fellow, for I saw that he did not hesitate to show the other boys that he thought them cowards, as they were. He was a brave boy; and I think he was the same one who ran after the gentleman of whom you speak.

And so it was; and I told JIMMY I would tell him more about bravery some other time, and I will.

OUR LETTERS FROM BOYS AND GIRLS.

How to Smooth Ribbons.

WE have taken your valuable paper for nearly twelve years, and like it very much. I have read the boys' and girls' letters in the RURAL with much interest, and would like to join their circle if they are willing. Of course all the little girls wear ribbons, but I wonder if they all know how to smooth them when rumpled. My plan is as follows:—Take a moderately hot flatiron, set it on the ironing board, then place the ribbon on the left side of the iron and pull it carefully through underneath the iron. If the ribbon is not pulled too fast, and the iron is the right warmth, this will be found to be a much better way than simply rubbing the iron over the ribbon. I learned the above from a milliner.—MARY W. COOK, *Maryland.*

Life in Florida.

I LIVE in Florida. My pa came here from Memphis, Tenn., three years ago for his health. We have plenty of fruit, peaches, quinces, figs, grapes, oranges and bananas. There are nice mocking birds singing every day in the orange trees. I am raising some chickens this year, but they are not doing very well. I had one hen that hatched ten chickens and lost them all but three by sores about their heads. I had two hens killed on their nests by a big opossum, but when he came after another one a few nights after, my pa, aided by the dogs, captured him and made a finish of the big old rascal. If any of the girls and boys that read the RURAL want to know anything about Florida I will answer their questions.—IRENE TURNER.

Christmas is Coming.

I HAVE been wanting to write to you ever since I came home from Ches. Co., Pa. I am very much interested in reading the boys' and girls' letters, and since you are so kind as to publish them I thought I would write too. I attend school, and it is about four miles to the school house. Sometimes it is pinching cold riding so far—but I soon get warm after I arrive home. Well, Christmas is coming on pretty soon. We are expecting to have a merry Christmas tree; we are also learning some certain pieces to speak, &c. We love music very much. Perhaps if this appears in the good, old RURAL, I shall be encouraged to try again. So I will now close.—P. C. B.

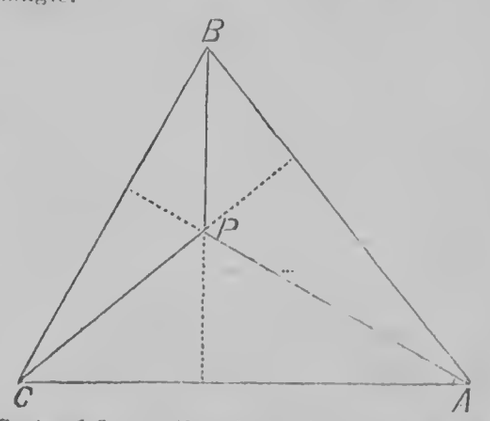
A Young Printer.

THE city in which I live is a very pleasant one, being situated in the central part of Michigan, on the Kalamazoo river, (Marshall). I am now busily engaged learning the printer's trade, and may some day stick type in the RURAL office. I am working in the Statesman office, BURGESS & LEWIS proprietors. If you will send me posters and specimen copies, I will post them, and see what I can do toward increasing the circulation of your valuable paper.—TIGA QUAD.

The Puzzler.

PROBLEM.—No. 8.

THE three perpendiculars of a triangle, intersect each other at a point within the triangle situated 30, 40 and 50 rods respectively from its several angles. Required, the sides of the triangle.



Scale of figure 40 rods to the inch. A P=50 rods; B P=30 rods; C P=40 rods.

B. F. BURLESON.

☞ Answer in two weeks.

CROSS-WORD ENIGMA.—No. 7.

My first is in May but not in June,
My second's in morning but not in noon;
My third is in large but not in small,
My fourth is in rise but not in fall;
My fifth is in country but not in town,
My sixth is in laugh but not in frown;
My seventh's in walk but not in run,
My eighth is in pistol but not in gun;
My ninth is in hug but not in kiss,
My tenth is in Master but not in Miss;
My eleventh's in saber but not in foil,
My whole is tillage of our soil. FRANZ.

☞ Answer in two weeks.

MECHANICAL ENIGMA.—No. 1.

I AM composed of 16 letters:
My 4, 15, 7, 8, 6 is a great mechanical power.
My 12, 5, 3, 14 is an agricultural implement.
My 11, 4, 13, 16, 7 is a weapon of warfare;
My 12, 9, 2 is much used by editors.
My 10, 2, 1 is what printers cannot do without.
My whole you will get if you read the RURAL NEW-YORKER. P. T.

News of the Week.

CURRENT TOPICS.

How to Build.

In the light of burning Boston, the question of the architecture of buildings has become the current topic of most large towns. Mansard roofs are denounced because Mansard roofs helped to spread the flames in Boston. Why not cut the throats of all cows because Mrs. O'Leary's cow kicked over a kerosene lamp in a stable of wood, in the midst of wooden buildings, lumber yards, etc., and set Chicago on fire? Some cities propose prohibiting the erection of Mansard roofs because Boston was burned. Why not prohibit the use of fires in cities because fire burned Boston? We are the queerest people on the face of the earth when we get in a freak to be so! Mansard roofs can be built just as safely as any other—of material that will not burn more than that of any other roof. Sensible, plain, common sense people will think it far better to so erect and arrange buildings for lighting and heating them as to lessen danger from fire, and improve and increase the agencies for putting the fire out if it once begins to burn. Why should the roof, or style of roof, of a building be condemned more than its inflammable contents?

Forty Thousand Jews to Colonize in the United States.

THE General Land Office at Washington has received information that a movement is on foot by the Israelites of Europe for settling a colony of Roumanian and Continental Jews in this country. A company is formed with a paid-up capital of $1,500,000, who contemplate settling in this country some 8,000 families, comprising 40,000 persons, and the question is presented to the General Land Office whether the United States Government will extend to the company a title to a tract of land, say 250,000 acres, for this purpose, on condition that so many families should be located annually, it being the desire to have but one settlement. The Land Department has replied that there is no law providing for the disposal of public lands in the manner proposed, even if a compact body of land comprising such an area could be found, but shows how the title may be acquired by the heads of these families under existing laws, and furnishes the writer with the necessary circulars relative to the public lands of the United States.

Froude vs. Burke.

JAMES ANTHONY FROUDE, the English historian, came hither to enlighten American people as to the relations which have existed and do exist, between England and Ireland. He has given us the English view of the question, the English phase of these relations. They have been both plausible and inconsistent with what is regarded the humane in civilization. His facts have been interesting, and have attracted the attention of students of history. Saying this to an Irishman, the other day, he said: "His facts are *lies*, sir! d——ble lies; that is, such of them as are essential to the support of his position." He has certainly roused the Irish nature in this country, and the Rev. Father Burke is replying to him in a series of lectures, giving the Irish view of the subject. Two lectures have been delivered. He analyzes Mr. Froude's lectures with a good deal of sharpness, yet always with good nature. So between the two views the truth may be reached in America!

Man's Inhumanity to Man.

IN our old writing books, "Man's inhumanity to man makes countless thousands mourn," was written and re-written until it became an axiom. The manner in which patients in hospitals, the insane, the culprits in prison, the workmen and apprentices under bosses, are often treated by those who, clothed with a little brief authority, forget that no man is fit to govern others who does not know how to govern himself, the revelations of cruelty, of inhumanity, which have been made as to the treatment of patients in insane hospitals by irresponsible "attendants" and "nurses," are sad commentaries upon our civilization, and will cause those who have friends so unfortunate as to be diseased with insane maladies, to shrink from subjecting them to the chances of such treatment. Does civilization make men callous? Or is the civilization and enlightenment of the present but one remove from the barbarism and brutality of the past?

Thiers President for Life.

FRANCE is a queer country and the French a queer people. One reading the current of events there, cannot help thinking of a bat disturbed in the sunlight or of the owl imitating the eagle at mid-day, such is the floundering which the people are evidently making to put on the harness of civil liberty and adjust themselves to the new order of things. A few days ago it was announced that an effort was to be made in the National Assembly to make Thiers President of France for life. Now it is asserted that Thiers don't want to be President for life. We should think not, indeed! Who would? It would be almost equivalent to a sentence to State's Prison for life for any man to be made President of a republic for that length of time, so far as actual wear and tear is concerned.

DOMESTIC NEWS.

Home News.

BOSTON is rapidly recovering from her great fire. The city refuses to accept aid from abroad, although almost every city in the land extended it. The city has been under martial law for a week; the old South church will be used for a post-office; the new post-office, now building, was not much damaged; the ruins have been blown down, and the streets opened; the Massachusetts Legislature is in extra session on account of the fire; no panic in the money market; a great many fire insurance companies have failed, mostly in Boston; the salvage from the fire is reckoned at 50 per cent.... All the horses in Philadelphia are sick.... All the larger cities are improving their fire departments.... SEMI-BUSINESS PARAGRAPHS.

To Lead all Competitors is the aim of the proprietors of the New Wilson Under-Feed Sewing Machine. It is founded on the very best principles known in the sewing machine science, and improvements, in advance of all other sewing machines, are being adopted constantly. The Wilson is rapidly gaining the preference of all parties that are acquainted with sewing machines, and it has already taken the front rank among the first-class machines of this country; and its price, owing to its being manufactured where labor and material is much cheaper than in Eastern cities, is fifteen dollars less than all other first-class machines, which fact alone is sufficient to induce all to examine the New Wilson before buying any other. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

Soldiers' Homesteads.—The Land Department of the Northern Pacific Railroad gives notice that there are abundant government lands, of the very finest quality, along the line of that road in Central Minnesota, which are open to settlement as free homesteads. Lands of this character near to railroads are now comparatively scarce in the West. The above-named Company carries all homestead settlers over its line at reduced rates, and gives them the free use of a comfortable Reception House while they are selecting their land and preparing a house. Information, maps, etc., may be obtained by addressing the LAND DEPARTMENT, N. P. R. R., at 23 Fifth Avenue, New York.

Facts for the Ladies.—Mrs. W. WEBER, New York, has operated on a Wheeler & Wilson Lock-Stitch Machine twelve years, earning from $2.50 to $3 per day, in private families; can stitch a dozen linen shirt bosoms and five dozen pairs of cuffs in an hour. See the new Improvements and Woods' Lock-Stitch Ripper.

Watch No. 1006, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by the United States Watch Co. (Giles, Wales & Co.), has been carried by me three and one-half months; total variation thirty seconds.—GEO. G. ROCKWOOD, 845 Broadway, New York.

Wide Awake Youth's Paper.—For judicious editing, select and popular contributors, and sprightly, entertaining reading, the Youth's Companion of Boston has no superior among the youths' publications.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Nov. 18, 1872.

THERE was less excitement in the Money and Stock markets last week, on account of the Boston fire, than the opening of business on Monday morning threatened. Money ruled dear, and the merchants wanted more discounts than the banks could accommodate, while on the Street the rates on first-class paper were 9@12 per cent. The Stock Brokers had frequently to pay a bonus over 7 per cent. for demand loans, but they had no serious difficulty in getting all they required, while the Stock market rapidly recovered from the first panic decline in prices. Our present table of quotations is nearly up to week before last on most of the Railroads and Telegraph. The Pacific Mail still lingers below 50 per cent., owing to some suspense in regard to the fine steamship Arizona, out of time between Panama and San Francisco.

The Treasury was not called upon for the relief of Boston by any extra measures to ease the Money market, and the sales of gold and purchases of U. S. 5-20s, were only to the usual weekly sum of $1,000,000 each way.

The shipments of Gold prove but temporary, and the open market is nearly one per cent. lower than last Monday. The shipments of the week were $5,550,000.

Trade in Merchandise is moderate. The Dry Goods business, as usual, is dull in November, and will so continue, no doubt, until after the New Year. The export demand for Cotton and other Produce is fairly active, and ahead of last season in respect to the value of clearances from this and the Southern ports.

The reassembling of Congress early in December will probably re-open questions of Currency and Banking. The progress of trade and railroad building has evidently gone ahead of the supply of Currency, and the National Bank Circulation demands more elasticity to keep the Money market from exceptional stringency in the Fall and Winter season.

The last quarterly National Bank Statement shows a lower pro rata of lawful Money to the immediate liability of the Banks than ever before—two per cent. lower than in June. Since 1870 the Treasury has withdrawn $40,000,000 Greenback Certificates, heretofore employed as a banking basis, and there has been no accession at the Money centers of Greenback Notes, in sufficient sums to take their place. In the intervening two years the liabilities of the Banks have increased $200,000,000, which, at 20 per cent., should require $40,000,000 more basis than before. The country, on the other hand, has $41,000,000 more Bank Circulation, but all this stays out in the South and West, to which quarters the Act of 1870 distributed the new issue, and it is only for a few weeks in the Summer that the New York Banks accumulate more Notes than required for their ordinary business.

The following are the comparative movements of the City Banks for the past fortnight:

	Nov. 9.	Nov. 16.
Capital	$88,019,200	$88,019,200
Loans	277,231,500	276,952,000
Gold and Greenbacks	61,685,200	60,321,800
Deposits	203,405,600	204,521,000
Circulation	27,588,100	27,569,300

PRODUCE AND PROVISIONS.

NEW YORK, Monday Nov. 18, 1872.

Receipts.—The receipts of the principal kinds of produce since our last are as follows:

Corn, bush	691,500	Meal, bbls	2,879
Oats, "	211,500	Flour, "	93,100
Wheat, "	93,800	Eggs, "	7,251
Rye, "	4,900	Cotton, bales	31,260
Barley, "	211,000	Hops, "	493
Malt, "	1,100	Wool "	1,150
Seed, "	600	Butter, pkgs	21,680
Beans, "	2,400	Cheese "	27,400
Meal, bags	2,218	Lard, "	3,479
Peanuts "	459	Dried fruits, pkgs	2,400
Pork, bbls	55	Cut Meats "	4,169

Beans and Peas.—Prices of mediums have been advanced 15c. per bushel. The stocks are very light, the shipment of supplies forward from the interior being limited through the horse distemper. Marrowfats sell slowly.

We quote Mediums, prime $2.90@3 per bushel; good do., $2.65@2.75; fair do., $2.25@2.50; prime marrowfats, $2.90@3.00; good do., $2.60@2.70; common and fair do., $2.25@2.50 Green peas at $1.75@1.85. Southern black-eyed peas, $2.80.

Beeswax.—At the low prices trade is improving and there is a steadier market. We quote at 32½@33c. for Western and Southern.

Butter.—There is a better purchasing feeling locally as the weather is in buyers' favor, but the receipts are very large, and with some our allment of the Eastern demand, owing to the Boston fire, a great deal of stock goes in store. Strictly choice half tubs or choice in any packages are very firm, as that class has been worked down to a known quantity. Other grades are offered freely at late figures. Pails are slow of sale. Western rolls are arriving and are salable at 22@24c. for best and 18@20c. for fair to good. Export butter past week 659 pkgs.

Orange Co. pails, fine, 36@38c.; Penn. and N. J. pails, good to fine, 26@35c.; common, 15@18c.; selections, half tubs, 33@35c.; half tubs in lots, 28@30c.; good to prime firkins, 27@29c.; do. Welsh, Fall, 27@28c.; Welsh tubs, fair, 20@23c.; other grades of State, 18@22c.; Western Reserve, choice, 21@22c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.; State dairies, tubs are 2@32c.; do. all firkins, 28@30c.

Cheese.—There is some little anxiety in regard to the future of the market. It is known that stocks are piling up in the interior, and the moderate arrivals here accumulate. Shipments last week were only 11,353 pkgs., and the home trade buy sparingly. There is a disposition to make trifling concessions, both here and in the interior. With the present feeling of buyers there is no prospect of relieving the market unless a decided decline is admitted.

We quote State factory, choice, 11½@11¾c.; good to prime, 13½@13c.; fair, 12½@13½c.; State dairy, 13@13½ for good to prime, 12@13c. for fair lots; for Ohio factory, 13½@13½c. for good to prime; English dairy, prime, 13½@14c.; fair do., 11½@13c.

Cotton—Is a trifle higher than last week through lighter supplies and an increased export demand. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	18¾	16½	16¾	17
Good Ordinary	18⅞	18½	18⅝	19
Strict Good do	18 9-16	18⅞	19	19¼
Low Middling	18⅞	19	19¼	19⅝
Middling	19⅛	19⅝	19¾	20
Good Middling	20¼	20⅜	20⅝	21⅛

For forward delivery sales on the basis of low middling are as follows:—Nov., 18⅝c.; Dec., 18⅞c. Jan., 18⅞c.; Feb., 18¾c.; March, 18⅞c.; April, 19⅛.

Dried Fruits.—Best lots of Southern quarter apples have been in good demand from shippers at 6¼c. Stocks are small, comparatively, and the advanced prices are easily sustained. Peeled peaches are without further change. Small fruits sell slowly.

Southern apples, 5@6c.; do. sliced, 7@8c. Peeled peaches at 11@17c. for Ga., 11@16c. for Va., and 16@20c. for North Carolina. Unpeeled peaches at 5½c. for quarters, and 2c. for halves. Cherries, 22@23½c. Plums, 14@19c. Blackberries, 9@9¼c.

Eggs.—The supplies of fresh are insufficient, and prices have advanced. Limed are in better demand and firmer. Sales, 32c. for Western fresh; 33@34c. for State and Penn., do.; 34@35c. for Jersey. Limed at 25c. for Western and 26c. for State.

Flour.—Prices have varied but very little. The demand has increased from both shippers and the home trade but the arrivals are large.

Superfine State	$5 80	@	6 15

Rye, common to fine	4 50	@	5 75
Corn meal, Western	3 10	@	3 50
Buckwheat flour	3 70	@	4 35

Fresh Fruits.—Exports of apples for past week, 10,200 bbls. for the British markets. This is the largest total ever shipped in one week from any American port. The market is firm under the above outlet and a steady home demand. A few canal deliveries have appeared. Fancy pears are no longer interesting in quotations. A few shipments of California have a special place. A recent car load sold at $3@8 per box. Quinces are scarce but no higher. Cranberries are held above the views of buyers. Old peanuts 90c.@$1.10 for Wilmington; $1.20@1.40 for Virginia. New Virginia, $1.45@1.75.

We quote—Apples, prime, $2.75@3.00; mixed, $2.12@2.37; fair, $1.25@1.75; common, $1. Pears—Vicar, $6@10; cooking, do., $1@7. Grapes.—Isabella, 4@7c.; Catawba, 7@10c. Cranberries, per crate, fine, $5.25@5.37; other, $2.25@2.75; bbls., $11.50@12 for Cape, and $8@11 for N. J. Chestnuts, per bush., $2.75@3. Hickory nuts, $2@2.25.

Grain.—Wheat is a trifle higher under an improved demand from shippers. We quote at $1.44@1.51 for No. 2 Spring afloat; $1.58@1.59 for No. 1, do.; $1.58@1.65 for Winter Red Western; $1.66@1.71 for Amber, and $1.73@2 for White. Barley is about steadily held; sales of choice Western at 95c., and prime Canada West at $1.17. Corn is about as fast week. The demand is moderate. Sales at 63@63½c. for steamer lots of Western mixed; 63½@64c. for sailing do; 64½c. for high mixed, nearly yellow. Oats are higher under a good trade. Sales at 48@50c. for old mixed Western; 46@47½c. for new do.; 47@50c. for new White; 45@49 for State; 42@46 for black Western.

Hay and Straw.—The supplies are very light, and prices have been advanced. We quote new shipping hay at $1.05@1.10; retail do., $1.40@1.75; salt do., 70@80c.; clover, 80@90c. Straw at $1.25@1.35 for long rye, 95@$1.05c. for short rye 80@90c. for oat.

Hops.—The market is again higher, with insufficient supplies, and a moderate call from brewers.

New York, growth 1872, at 33@38c.; Eastern do., 33@38c.; Western do., 33@38c.; Yearlings '71 20@25c.; Olds '70 10@15c.; Old Olds, '68-69 8@10c.; Bavarians, 35@40c.; English, 30@35c; Belgian, nominal, 28@30c.

Poultry and Game.—Reports are being received here of a disease prevailing extensively in poultry, a deal similar to the complaint among horses, and even now some of the poultry coming into market show signs that they have been affected by it. It has created considerable alarm among the trade here, and unsettled prices. In game quail and venison are lower.

We quote dressed poultry:—Chickens, Jersey and Bucks county, prime, 18@20c.; do. fair to good, 16@18c.; do. State, prime, 15@16c.; do. fair to good, 14@15c.; do. Western, prime, 15@16c.; do. poor to good, 12@14c. Ducks, Jersey, prime, 21@22c.; do. fair to good, 17@18c.; do. State, prime, 20@21c; do. fair to good, 17@19c. Turkeys, State, prime, 20.; do fair to good, 17@19c.; Western, good to prime, 18@19c.; do. fair to good, 15@16c. Geese, Jersey, prime, 17@19c.; do. air to good, 15@16c.; do. State, prime, 17c.; do. fair to

good, 15@16c. Live Poultry:—Chickens, Jersey, ₱ lb., 14@15c.; do. Western, 13@14c.; roosters, 9c. Turkeys, N. J., 16@17c.; do. Western, 15c. Ducks, N. J., ₱ pair, 75c.@$1; do. Western, 62@75c. Geese, N. J., young, per pair, $2.25@2.50; do. Western, $1.75@2. Venison, whole deer, per lb., 15@16c.; saddles 16@17c.; canvas back ducks, $2@2.25 per pair; mallard and teal do., 40@50c.; woodcock do., 75@87c.; partridges, state, 87@$1.12; do. eastern, 62@75c.; quail per doz., 1.75@$2.25; prairie hens per pair, 95@$1.00; rabbits, 30@40c.; hares 50@75c.

Provisions.—There is little doing in round lots. The bids are $15.50 cash and $15.25. Nov. jobbing pork has sold largely, mostly at $15.70@15 during the week, but at the close it sympathized with round lots and is quoted at $15.75. New pork for Dec. quoted with sales at $11.50 and $14 for Jan. There are no other brands of pork in stock to speak of. Beef has seen a heavy business; the sales since our last embrace 10,000 tcs., part for export. New prime mess tcs. $21@22, do. India 23.50@25. Beef hams have also sold largely at $31. Dressed hogs have ruled low for a long time and entments have become very weak. Pickled hams range at 10¾@11¾c. Smoked hams 13¾@15c. Bacon is in good demand, but prices are not stiff. Spot long clear quoted 8¾c. Western short clear for winter months, 7¾c.; long and short together, 7¾c. Lard is firm at 8¾c. for Western, and 8¾c. for city steam. Tallow is lower, high freights are ruling, and few French buyers are operating; quoted 9@9¼c. for good to choice, steam in bbls. 8¾c., in tcs. 9@9¼c.

Seeds.—About 600 bags new clover have been taken by shippers at 9¼c. for Ohio and Indiana. This year's crop grades about alike in this market. Timothy is quoted at $3.25@3.50. Rough flax dull, $1.90@2.

Sundries.—Honey—Market unchanged: 28@30c. for dark and 32@35c. for white, in glass boxes; mixed lots, 21c. Cider at 6@10c. per gallon. Feathers, live geese, new, fine, per lb., 60@70c.; do. mixed, 40@50c.; hen, 7@9c.; vinegar, cider, ₱ gal., 20@25c.; do. manufactured, 15@20c.; newspapers, ₱ M. 4@4½c.; white rags, 5@5¼c.

Tobacco.—Kentucky leaf is selling freely to shippers at full prices, with a scarcity of lugs. Seedleaf is selling slowly.

QUOTATIONS—NEW CROP.

For potatoes in shipping order, add 25c. ₱ bbl.

Whisky—Is lower and dull at 95½c. for Western.

Wool.—The market is 5@8c. higher with a strong feeling. The loss of wool by the Boston fire was fully 3,000,000 lbs. Demand is largely from speculators, although manufacturers are buying to some extent to stock up. Fleece is selling at from 57 to 65c.; combing fleeces, 70c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Nov. 16, 1872.

THE market at Little Falls for the week ending Nov. 16 has been dull and light sales of factory. The prevailing horse epidemic in the country renders it difficult in many instances to deliver goods, and they are held over at the factory. In farm dairies the shipments by railroad and canal were 800 boxes. Prices ranged from 13½c. to 14c., the latter figure being paid for only a few extra lots.

Factory sales were only about 3,000 to 4,000 boxes, but prices were firm. We give quotations of a few sales as follows:

St. Johnsville	14	J. D. Ives	14
Old Fairfield	14¼	Eatonville	14¼
Herkimer Co. Central	14	Fairfield Association	14¾

There has been an increased quantity of butter delivered and prices are better than last week. We quote sales at 31@31c. and 32c., according to quality. A few gilt-edged lots at 33c.

The weather during the early part of the week was mild but damp, and the herds are still at pasture.

We have advices from abroad for the last week in October. Our London correspondent says there is an active demand for American cheese. Sept. make, and all is cleared as landed. Old strong flavored stuff not wanted. Extra fine is quoted at 70@72s., fine 62@64s., good 58@60s. The other descriptions of cheese sell as follows:—English Cheddar 78@88s., Wiltshire double 61@76s., Scotch 58@78s., Cheshire medium 56@68s., fine 70@78s., Dutch cheese, Edams, 56@63s., Gondas 48@58s., Derby-shave 50@61s.

In butter the market is quiet in European, and fair sales of Irish and American at quotations. Clonmells 124@128s., Dorsets 148@150s., Normandy extra 136s., Canadian 50@110s.

The corresponding prices last year were for American cheese 60s., Clonmells butter 130s.

LIVE STOCK MARKETS.

NEW YORK, Nov. 16, 1872.

THE supply of most kinds of live stock has been quite large, while poultry and game has been abundant and cheap during a portion of the time. The weather was severe and rainy soon after the close of the last report, and both dressed meats and poultry were forced on sale at low rates. Just now, with the coolest weather of the season, everything save pork is doing better. That is too abundant for any improvement, and it is very evident that low rates must be the rule the coming winter, for the country is full of hogs. Cattle are doing the best at the present time, and the prospect for the future is good for the feeder. Dealers are now having a good thing. Dressed beef already begins to arrive from Chicago.

RECEIPTS OF LIVE STOCK

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	7,646	75	1,401	28,364	51,713
" last week	8,088	81	1,600	21,927	44,6 0
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—The supply of cattle was even lighter than it was last week. We have heretofore been accustomed to 9,000 and 10,000 cattle per week, that the 7,646 now reported seems small. The market has favored owners during the entire week, prices having advanced about 1c. since last Saturday, and ½c. since Monday. The average quality has been poor, very many Texans coming forward, while some of the natives were even poorer in flesh. The meanest of these were some little Utah steers and heifers. Cattle are now arriving from that distant and new State of Colorado. Of course, there is a heavy "draft" on them. During the past week, Texas has led off in point of numbers, and it is a hopeful sign that the quality of that kind of stock is improving. When native or blooded bulls have been taken into that country and a cross obtained, the quality is much improved. The market closes strong and bare of stock. The latest sales were 50 head fine 8 cwt. Illinois grades at 14¾c., 58 lbs. per cwt. Texans went at 10c., 55 lbs. per cwt. Fair to good natives readily command 12½@13¾c. The tide will hardly be turned before the end of next week. Some buffalo meat has been received, but not enough to affect the market. We look for a large supply during the Winter.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb.	14 @ 14¼	13 @ 13½
Good to prime	13 @ 13½	12 @ 12⅝
Medium	12 @ 12½	10½ @ 11½
Poorest grade	8½ @ 10	7½ @ 9¾
Average sales	12 @	10¾ @ 11

Calves.—The high prices last reported rather checked the use of veal; the trade turning upon the much cheaper pork, and now we have a decline of about ½c. on both live and dressed calves, though the close of the market is strong, and the recent decline may be restored. Several loads of 130@140 lbs. Bucks Co. prime veals sold at 11c. Quotations are 7@9½c. for half-fed to thin milk veals and 10@11c. for fair to prime.

Hogs.—The improvement of last week was of short duration, for the heaviness of Monday's market very soon amounted to a decline, and a panic nearly ensued. Dressed suddenly fell to about the price of live, and owners found themselves heavy losers. Stock is coming forward faster than it can be used, save at low rates. Live are now worth 4¾@5c., and dressed 5¾@6c. for heavy to medium, and 6¾@7c. for light and market pigs, small Jersey and State selling at 7½@8c.

Milch Cows.—These come forward slowly, while the higher prices of both cow beef and milk add to their value. The demand is good, and more cows could readily be sold. Those of large size and fleshy, go best now that beef has advanced. Quotations are $40 to $85 for poor to extra.

Sheep and Lambs.—The supply continues to increase, but it is not large enough to materially lessen the prices. Still, it is difficult to reach over 6¾c. for fat sheep and 8¾c. for lambs. One lot of very extra 80 lbs. Canadas reaching 9c., while a car of 67 lbs. sold at 7½c., and some 120 extra sheep at 7¾c. Good, fair Ohio and Michigan sheep of 80@85 lbs. sell at 6¾@7½c.; a car 118 lbs. Canadas going at 6¾c. Sheep take the range of 4¾@ ¾c. for quite poor; 5¾@6¾c. for fair to good, and 7c. for choice. The average of 7,681 sheep and lambs sold last week was $5.48 per head, with 3,862 at $5 03.

LATEST.—Monday, November 18, 4 P. M.—Beeves.—Fresh receipts, 111 cars at Communipaw, 78 at 100th St., and 60 at Weehawken, making 1,925 head on sale. Save for prime cattle, which are scarce and high, the market is ½c. off from Friday. The few choice beeves went as high as any time this season, even exceeding 15c., but poor natives and Texans sold at 9¾@10½c.

Sheep and Lambs.—Receipts to-day, 20 cars at 40th St., 20 at 43th St., and 16 at Communipaw, making 11,124 on sale. There is no change in good stock, but the market is overstocked with poor lots selling low—several cars 65@75 lb sheep at 5¾@5½c.

Hogs.—Fresh arrivals, 70 cars at Communipaw, and 48 at 40th St., making 12,586 on sale. An attempt was made to advance dressed ¼c., but it failed, the market closing tame at 5¾@7c. as extremes.

SPECIAL NOTICES.

A Positive Radical Cure for Rupture.—The Elastic Truss Company, at No. 683 Broadway, New York, will send their Descriptive Circulars to any person afflicted with Hernia. This Truss can be sent by mail to any part of the country.

T. H. SAYRE, Druggist, 814 6th Ave., N. Y.

REED & BARTON,

Established 1824,

MANUFACTURERS OF

FINE

ELECTRO-PLATED

WARE.

"GEM" PATTERN.

This Illustration represents a new design of Electro-Plated Fork, manufactured by Reed & Barton. In design and finish it so much resembles the solid silver that even an expert would find it difficult to detect the difference.

All their forks and spoons are made of the finest quality of Nickel Silver, and are heavily plated with pure silver.

They also manufacture almost every other article of Table-Ware, such as **Tea and Dinner Sets, Cake Baskets, Fruit Stands, Water Sets, Epergnes, Caudelabras, &c.,** in many new and beautiful designs.

They pay especial attention to their **Patent Seamless-Lined Ice-Pitchers,** which have been so thoroughly tested and given such satisfactory results.

Reed & Barton now have one of the largest works for the manufacture of Silver-Plated Ware in the world, but they find it necessary to make extensive additions this season. They will, besides greatly enlarging their principal factory, build a new one, 240x40, three stories high, thus adding more than 40,000 square feet of floor to the space now occupied in the production of their goods.

They have salesrooms at the factory, at Taunton, Mass., and at No. 2 Maiden Lane, New York.

Their goods can also be purchased of the principal dealers in Silver and Silver-Plate Ware.

CHOICE POULTRY CHEAP.—Changing my business, I shall sell my *Choice Stock* of Partridge and Buff Cochins, Light and Dark Brahmas, at *low prices.*

JOHN L. CLARK, M. D., Waterloo, N. Y.

The Wheat Field of America!

Healthful Climate, Free Homes, Good Markets.

THE NORTHERN PACIFIC RAILROAD offers for sale its **Lands in Central and Western Minnesota,** embracing: 1. The best of Wheat Land; 2. Excellent Timber for the Mill, the Farm and the Fire; 3. Rich Prairie Pasturage and Natural Meadow, watered by clear Lakes and running streams—in a Healthful Climate, *where Fever and Ague is unknown.*

Grain can be shipped hence by lake to market as cheaply as from Eastern Iowa or Central Illinois. Cars now run through these Lands from Lake Superior to Dakota. Price of land close to track $4 to $8 per acre; further away, $2.50 to $4. **Seven Years' Credit;** Warranted Deeds; Northern Pacific **7-30 Bonds,** now selling at par, received for land at $1.10. No other unoccupied Lands present such advantages to settlers.

SOLDIERS under the New Law (March, 1872) get 160 acres FREE, near the railroad, by one and two years' residence.

TRANSPORTATION AT REDUCED RATES furnished from all principal points East to purchasers of Railroad Lands, and to Settlers on Government Homesteads. Purchasers, their wives and children **carried free** over the Northern Pacific Road. Now is the time for Settlers and Colonies to get Railroad Lands and Government Homesteads close to the track.

Send for **Pamphlet** containing full information, map and copy of New Homestead Law. Address LAND DEPARTMENT, NORTHERN PACIFIC RAILROAD, ST. PAUL, MINN.,

OR 23 FIFTH AVENUE, COR. NINTH STREET, NEW YORK.

AMERICAN MERINOS.—We offer for sale about 100 of our fine thorough-breds. Also, pure Light Brahmas and Eggs. Send for Catalogue. Orders solicited. JOHN SHELDON & SON, Moscow, N. Y.

LOW CASH RATES!

THE

Charter Oak Life Insurance Co.

OF HARTFORD, CONN.

ORGANIZED 1850.

$10,000,000 ASSETS.

Issues policies of Life Insurance on all the ordinary plans at lower rates than other mutual companies and pays annual dividends increasing yearly. The plan called

DEPOSIT INSURANCE,

lately introduced by this Company, is superior to any short term Endowment or *Tontine* plan, as it fixes a large surrender value for the policy at the end of any of its current years.

☞ Agents in all the principal cities and towns.

Miscellaneous Advertisements.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,

HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

DICK'S

Encyclopedia of Practical Receipts and Processes,

CONTAINING OVER

6,400 Receipts,

Embracing thorough information, in plain language, applicable to almost every possible industrial and domestic requirement.

By WILLIAM B. DICK.

607 pages, royal octavo, printed on fine toned, sized and pressed paper. Bound in cloth, price, $5; sheep, $6; arabesque, $6; half calf, extra, $7.50.

This work is a comprehensive Book of Reference for the Merchant, Manufacturer, Artisan, Amateur and Housekeeper, embracing valuable information in the Arts, Professions, Trades, Manufactures, including Medicine, Pharmacy and Domestic Economy.

It would be difficult to find any one of the 6,422 paragraphs in this work (many of which contain several receipts) that is not worth at least the price of the book to the person desiring to apply it. A great number of them are original contributions prepared expressly for the Encyclopedia, or are to be found only in rare and costly works. Prominent among the immense mass of subjects treated of in the book are the following:

Tanning.	The Art of Dyeing.	Alcohol and Alcoholometry.	Kalsomine and Whitewash.
Distillation.	Metals and Alloys.	Petroleum and Kerosene.	Varnishing and Polishing.
Brewing.	Patent Medicines.	Bleaching and Cleaning.	Japanning and Lacquering.
Syrups.	Medical Receipts.	Sauces, Catsups and Pickles.	Boot and Harness Blacking.
Cements, etc.	Imitation Liquors.	Receipts for the Garden.	Hard, Soft and Toilet Soaps.
Waterproofing.	Cider and Vinegar.	To Remove Stains, Spots, etc.	Gilding, Silvering, etc.
Artificial Gems.	Perfumery, Cosmetics.	Pyrotechny and Explosives.	Electrotyping, Electroplating.
Aniline Colors.	Flavoring Essences, etc.	Inks and Writing Fluids.	Wines, Cordials and Bitters.
Lubricators.	Hair Dyes and Washes.	Paints and Pigments.	Pomades and Perfumed Oils.
Photography.	Tooth Powders, etc.	Painting and Paper-hanging.	Weights and Measures.

*** *The above book is for sale everywhere, and will be sent by mail to any address, free of postage, upon the receipt of price. Send all orders to* DICK & FITZGERALD, Publishers, New York.

Real Estate, Etc.

Address O. F. DAVIS,
Land Commissioner U. P. R. R. Co., Omaha, Neb.

AN UNUSUAL OPPORTUNITY TO purchase a first-class Farm, 182½ acres, under splendid cultivation (having 4 miles of tile drain and 2 miles of board fence), 12 acres of the choicest apples, 30 acres of meadow, and 22 acres in wheat. Fair farm house, with cellar, tenant house, barn, cornhouse, hog pens and all necessary outbuildings, which, with the fences, are in good repair. *Only* ¼ mile from the Station of the L. S. & M. S. R. R. Trains passing almost hourly. On a main parallel road from Toledo, but 6 miles distant. *In five years* Toledo will rival Cleveland in population, and Chicago for business in 10 years. She has now *Seventeen Railroads* in operation and in the process of construction. Farm is not 6 miles from land that is selling at $1,000 per acre. Toledo is commanding more attention than any other Western city. Price $20,000; terms easy. Address GEO. E. POMEROY & SON, Real Estate Agents, Toledo, Ohio.

FOR SALE.—A VALUABLE DAIRY Farm, containing 200 acres, about one-half improved, the balance well timbered—20 acres of chestnut timber—with good buildings. Situated 1½ miles from the Rochester and State Line R. R., and 4 miles from the N. Y. and Erie. Also, adjoining, 268 acres, with good buildings, steam mill, about 75 acres improved, balance well timbered, with hemlock enough to pay for the farm. Price low, and terms easy. Well watered with spring and trout brooks; first-rate chance for trout pond. For particulars, address C. DODGE, Great Valley, Catt. Co., N. Y.

HOMES.—The Eastern Shore of Maryland is settling up very rapidly. Great advantages over the West and Far South. Send for Catalogue. F. MANCHA & BRO., Ridgely, Md.

— A party of Maine men have been hunting the moose in the wilds of Nova Scotia.
— The Boston Advertiser says the fire will cause no immediate personal suffering.
— The Cornhill Magazine recommends persons in the evening of life to take to gardening.

New Publications.

ELECTION IS OVER

And now is the time to subscribe for your agricultural and family paper for 1873. **The Prairie Farmer**, now almost entering upon the **thirty-third year** of its usefulness, is the most popular and pre-eminently the **best** published at the West. It is **original, reliable and comprehensive**, each number presenting a rich variety of instructive and entertaining matter. Issued **weekly**, its contents are always fresh and seasonable, and notwithstanding its present high standard of excellence, the publishers are warranted in promising that it shall be a **better paper** next year than ever before. Though designed especially to meet the wants of Western, Northwestern and Southern farmers and industrial men, and their families,

THE PRAIRIE FARMER

is also just what is needed by the thousands of people at the East who contemplate **"going West,"** and hence wish to know all about Western farming, fruit-growing, tree-planting, cost of land, improved and unimproved, character of soil and climate, mode of cultivation, average yield, &c., &c. The subscription price is $2 per year, in advance, and new subscribers for 1873 receive the paper **the rest of this year free.** That is: Subscriptions will date from the time received, and expire January 1st, 1874! Therefore, if you subscribe **now**, you will receive **The Prairie Farmer over thirteen months** at the regular price for a year, and **the sooner you subscribe the more you will get for your money!**

IT WILL PAY YOU!

Remember that our **New Premium List**, now ready in pamphlet form, embraces **One Hundred Attractive and Useful Articles**, offered on most desirable terms, and also, that Agents, who prefer it, may retain, in remitting, a **Cash Commission of Twenty per Cent.** Sample copies of the paper, and other canvassing documents, are ready and furnished free on application. Send for them and go to work. Address

PRAIRIE FARMER COMPANY, Chicago.

HOW 'TIS DONE, or the Secret Out.—Moustache and Whiskers in 42 days. This GREAT SECRET and 100 others. Gamblers' Tricks, Cardiology, Ventriloquism, all in the ORIGINAL "Book of Wonders." A valuable book; 17,000 sold; 15th edition. Mailed free for 25 cts. Address D. C. CUTLER, Carthage, Illinois.

FREE!—SEND FOR A SPECIMEN. A full Catalogue of our Standard, Miscellaneous and Illustrated Juvenile Books, or specimen numbers of Oliver Optic's Magazine, sent by mail free. LEE & SHEPARD, Publishers, Boston where all publications may be found.

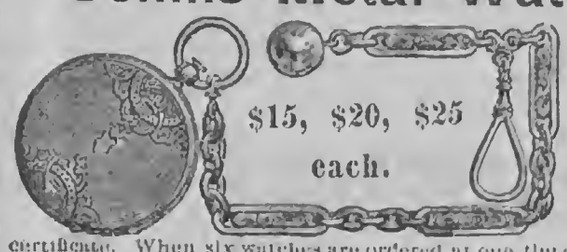
Collins Metal Watches and Jewelry.



This cut represents the appearance of one of our $25 Watches and $12 Chains, only reduced in size—the watches being the full sizes for Gents, Ladies and Boys; also, this style Vest Chain, full size and beautiful, $12. These watches, for accuracy of time and in appearance, are fully equal to Gold watches that cost $250. Some of our watches that have been used on Railroads have not varied *one minute* in six months. We manufacture three qualities and three sizes—prices, $15, $20 and $25—all Patent Levers. Full Jeweled, in Hunting Cases, Gents', Ladies' and Boys' sizes. Chains, $2 to $12, according to weight and finish. Every watch is fully guaranteed by a special certificate. When six watches are ordered at one time, we send a *seventh one free.* All kinds of Jewelry of the same elegant Collins Metal. Goods sent by express, to be paid for on delivery; or, if Post-Office Orders be sent, they will be sent registered and free by mail. Send a stamp for our Illustrated Circular. The Genuine Collins Watches can only be had of us; we have no Agents. The goods of C. E. Collins & Co. have invariably given satisfaction. *N. Y. Times.* One of the $20 watches is worn in our office, and we have no hesitation in recommending them.—*Pomeroy's Democrat.* Address COLLINS METAL WATCH FACTORY, **335 Broadway, N. Y. City.**

This Machine with recent Improvements is guaranteed to supply every want of the household, for either plain or fancy work. It knits all sizes of Stockings and Socks, with heel and toe complete, and is a never-ending source of amusement to ladies of leisure, as well as profit and easy support to those that require it.

Agents wanted every where by the BICKFORD KNITTING MACHINE COMPANY. DANA BICKFORD, President and General Business Supt., 689 Broadway, New York.

CARHART'S PULVERIZING CULTIVATOR has more practical points than any cultivator in use, and is indispensable as a farm implement. Price, $22. C. C. BRADLEY & SON, Manufacturers, Syracuse, N. Y.

Goux Absorbent Closet & Urinal.

SANITARY—CONVENIENT—PROFITABLE
to Public Institutions, Schools, Manufactories, Farmers, Gardeners and others.

The Goux Fertilizing & Sanitary Co.

offer, by the use of their Patent Absorbent Closets and Urinals, a method of collecting, deodorizing and utilizing human excreta, at once convenient, inoffensive and economical.

The liquid is separated from the solid excrement by absorption, all the valuable properties of each are retained, and the product is an invaluable manure.

For explanation and practical exhibition of the system, call at Office and Warerooms of Company, corner of Varick, Vestry and Canal Sts., New York.

Address MUNN & CO., 37 Park Row, New York.

A BLOW AND A KISS.

BANKING HOUSE OF
FISK & HATCH,
No. 5 Nassau Street, New York.

WE RECEIVE DEPOSITS AND ALLOW INTEREST on daily balances; issue interest-bearing CERTIFICATES OF DEPOSIT; MAKE COLLECTIONS in all parts of the United States and Canadas, and execute orders at the Stock Exchange for INVESTMENT STOCKS and BONDS.

We buy and sell, as usual, GOVERNMENT and CENTRAL PACIFIC and CHESAPEAKE AND OHIO BONDS.

We especially recommend to the attention of investors the SIX PER CENT. FIRST MORTGAGE BONDS of the CHESAPEAKE AND OHIO RAILROAD COMPANY, which are issued, either coupon or registered, in denominations of $100, $500 and $1,000. Interest is paid in gold, May and November. The smaller denominations are nearly exhausted, and of the $1,000 bonds we have only a small supply remaining. At their present price they yield *over seven per cent. income in gold.*

This great work is about completed; there is now nearly 400 miles finished, and only about thirty miles remain to complete the uniting of the Atlantic tide-waters to the Ohio River Valley by the shortest and easiest route possible.

The Company have, at considerable expense, caused a geological survey to be made of the route of the road by Professor Ridgway. Copies of his valuable Report, with a geological map, and also a pamphlet containing the latest information in reference to the present condition and future prospects of the road, can be had on application at our office.

The quantities of white oak, chestnut, walnut, and other valuable timbers; the cannel, splint and bituminous coals; the varieties of iron ores; the limestone, salt and other products, render the route of the Chesapeake and Ohio Railroad probably the most attractive location for coal-mining, iron-making, and kindred manufactories and industries, in the United States.

FISK & HATCH.

PRATT'S ASTRAL OIL

Has for the past four years been acknowledged as the safest and best illuminating oil for family use ever made. It is rapidly displacing all illuminating material in every part of the world where lamps are in use. Its safety and unequaled burning qualities have been tested by consumers in nearly every city and village in the United States.

Floricultural.

THE CLEMATIS.

THERE is scarcely a nook or corner of this globe which has not given us one or more species of the *Clematis*. The greater portion of the species are climbing plants and they have ever been popular, inasmuch as there seems to be no limit to varieties or the uses to which they can be put in covering walks, trellises or training to stakes. Wherever beautiful climbing plants can be used the showy *Clematis* always should, if it does not, come in for a goodly share of attention. Years ago the English gardener was content to train his "Traveler's Joy," (*Clematis vitalba,*) and our own, found its counterpart in the little greenish-white flowering species (*C. Virginiana*) which is so common in all our swamps and low grounds, and at this season, covered with seeds to which are attached a long silky fringe. Japan, however, has given some elegant species which are in a great measure superseding the older ones; and the new sorts grown from these are among the most superb ornamental plants in cultivation.

The *Clematis florido* or great florid *Clematis*, and *C. pater*, also called *C. cerulea*, and *C. grandiflora* are probably the best of the Japanese species, and have been more extensively used for producing new seedling varieties. The flowers of some of these new varieties are six or more inches in diameter and of various colors, some being a dark velvety purple, others deep blue, and of every shade from these to pure white.

In the accompanying illustration a single flower of a new variety, the "James Gould Variety," is shown natural size. The color is a very light shade of purple, or what might be termed white with a purplish tint. There is really no limit to the number of varieties that may be produced, because the seedlings seem to sport very widely, and seeds gathered from a light-colored flower will often give varieties of very deep shade. Every season brings its complement of new sorts, and one begins to consider where this thing will end, or where names are to be found for all the beautiful varieties that are likely to be prejudiced.

Soil and Culture.

The *Clematis* will thrive in any good soil, but prefers a light, dry loam, with a little peat or leaf mold intermixed Most of the new varieties raised from the Japan species are quite hardy as far North as the latitude of this city but a slight protection such as may be given by throwing the vines down upon the ground and covering with earth, or coarse mulch, is beneficial, and will insure a greater abundance of flowers, If the vines are killed down, the new shoots springing from the root will bloom the first season; but it is better to preserve a portion of the old ones if a great display of flowers is desired. When trained to stakes it is only necessary at the approach of cold weather to coil the vines around the base and bank up with earth.

Propagation.

To produce new varieties seeds must be sown, and as these do not always germinate the first season, a little patience is required as well as care in keeping them constantly wet. We usually sow the seeds as soon as ripe, in shallow boxes filled with leaf mold and sand about equal parts. Set the boxes in the shade of the trees, or on the North side of a building or fence, and where it will be convenient to give water when required. The soil in which the seeds are sown should never be allowed to get dry, but kept constantly wet until the young plants appear. Neglect in watering is the sole cause of most failures in raising *Clematis* seedlings.

The plants may be allowed to grow in the boxes the first season and transplanted to the open ground the following spring. Give protection until the plants bloom, which will usually be when two or three years old. The best varieties should then be preserved and the others thrown away. Varieties may be multiplied by cuttings from green side shoots taken off in Summer and placed in cold frames or under bell-glasses. Layers of the young shoots in Summer will also strike root very readily, and the old plants may occasionally be divided. Much pleasure may be derived from raising seedlings; and we would advise amateurs to try their hand at this, for nature is not partial, and will display her beauties to the novice as well as to the professional florist or gardener.

CLEMATIS—THE "JAMES GOULD VARIETY."

FLORICULTURAL NOTES.

Protection for Choice Plants.—A great many valuable plants are neglected and lost because there is no ready means of protecting them at hand. We have quit a respectable number of little GEORGE WASHINGTONS among our 40,000,000 of people who, added to the chickens, cats, dogs, pets and poultry of all kinds, destroy annually more than they are worth, (the first depredators excepted). Forty persons with means can do better, but here is a recipe for the million. Take a flour barrel, mark around it at the desired hight from the bottom. Cut each stave half way through at the mark; split each stave and take out half; remove the hoops above the tub thus formed and draw the remaining half staves together as close as needed at the top. If a little skill and taste is exercised you can cut the staves in any desired figure, thus making, in a few minutes, a cheap and effective protection for a tender plant. It can be portable or sunk in the ground by removing the bottom. A sack can be drawn over it to keep out frost.—J. A. MACDONALD, *Millenville, Florida.*

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

The Plague of Abundance.—*Nov.* 13.—Seldom do people complain of having too much of a good thing, although they are often placed in just such a predicament without knowing the fact. For several years past we have had a rather short crop of apples; but the past season there has been a great abundance, and the result shows that too much fruit is almost as bad as none, for prices have been so low no one gathered their apples, or at least none but the very best, and at this date thousands of bushels are rotting upon the ground in my own neighborhood, and I presume elsewhere, very few farmers appearing to know that apples are good food for stock, or that cider vinegar commands a good price in market.

This abundant crop will also be almost a death blow to the old orchards, for neglect is sure to follow, and that, too, just at the time the trees will need stimulating the most. The exhaustion caused by overbearing this year will result in a very meager growth next, unless the trees are pruned and manured before the leaves appear in Spring. The plague of abundance has ruined nations as well as individuals, and whenever I hear of a place where all kinds of fruits and grains grow without care or culture, I feel like pitying the people, for they are certain to become indolent, ignorant and degraded. The effect of extremes is always deleterious; and a half famine is far better than a superabundance of the good things of this world. To work, can scarcely be called a natural trait of the human character, but a necessity; and as necessity is said to be the mother of invention, we find the arts and sciences and all that makes the present race of men great and noble, flourishing most in cool climates and where nature seems to yield up her fruits only through compulsion. A few seasons in succession of great plenty of any kind of fruit or grain would be disastrous to its culture; therefore it is better to have just enough to supply our needs than too much.

Chrysalis of a Hawk-Moth, Nov. 14.—I have just received through the RURAL NEW-YORKER office, a small box from Mr. D. W. C. of Logan, Ohio, containing a chrysalis which I am desired to name in my "Diary." I am always pleased whenever able to give information to neighbors or correspondents; and if my weekly gossip in these columns about rural affairs aids in any way to make its readers more inquisitive about the things which surround them during their Daily Rural Life, I shall feel that I am doing some good in mine. I presume that every one who has a garden must have observed a large green worm feeding upon potato and tomato leaves. This worm has a kind of thorn upon the hind part of its body, and several oblique, whitish stripes on the sides; when full grown, it is about as thick as a man's forefinger, and some three inches or more in length. When the worm attains its maturity, it crawls down the stems of the plants and buries itself in the earth. In a few days it throws off its skin and becomes a chrysalis of a brown color, like the one sent me from Ohio. The chrysalis is about two inches long, with a tongue case about an inch long bent over from the head, the end just touching the breast, somewhat resembling the handle of a mug or pitcher. All through Winter this chrysalis remains in the ground, and when the warmth of Summer penetrates to its resting-place, the skin bursts open, and a large and beautiful moth crawls forth, known as the Five-Spotted Sphinx or Hawk-Moth. (*Sphinx quinquemaculatus* of HARRIS, or *Macrosila quinquemaculata*, STEPH—See MORRIS' catalogue of described Lepidoptera of North America, p. 190.)

There are many species of sphinges which infest our gardens, and we frequently see them early in the evening flying about, sucking the honey from flowers with their long, slender proboscis. Some of them resemble the humming-bird so closely that very ludicrous mistakes have been made in regard to the identity of the insect and bird. I have known persons to declare that humming-birds did not go to warm climates in Winter, but bury themselves in the earth, for they had often dug them up, and also seen them crawling out of the ground in Spring. Of course, it was these humming-bird moths or sphinges that they saw, and not birds; but there are very few persons who study nature sufficiently to know butterflies from moths, or moths from birds, and still they are often very wise in their own opinion, and talk learnedly of the designs of our Creator. We have no occasion to go far from our own firesides to learn how wofully ignorant we are of nature, and that our capacity for enjoyment may be increased many fold by studying the habits of the minute forms of life that are constantly about us.

I fear that many readers of the RURAL NEW-YORKER shrink from asking questions of its Editors and correspondents because they do not wish to be thought ignorant; but this is a very foolish and absurd view to take of this subject, for the wisest man that ever lived is, or was, ignorant of things which he never had occasion or opportunity of studying. SOLOMON was, no doubt, very ignorant in regard to newspapers, railroads, and many other things with which our school boys at the present time are very familiar; but had he lived in this century, he would have been wise enough to ask questions and learn something about them. Remember, that anything that interests you will probably interest some other person as well, and it will do no harm to try and learn something relating to the same, whether you are successful or otherwise.

Evergreens from Cuttings.—*Nov.* 15.—Last fall I made several thousand cuttings of choice evergreens, such as the new *Arbor Vitæs*, *Retinisporas* and *Junipers*, planting them in shallow boxes filled with pure sand, then placing them under the center stage of my green-house, where they remained all Winter. Out of some twenty species and varieties, not one failed entire, although there were more or less of the cuttings of each which did not strike root; but upon the whole, the experiment was a decided success, and about ten thousand fine thrifty plants is the result. There are many private conservatories in which spare room could be found for raising a few thousand evergreens during the Winter, because they do not require a full exposure to the sun, consequently space not suitable for other plants can be used for this purpose. If the cuttings are made in the Fall, before they have been severely frozen, roots will be produced much more readily than if taken off later in the season. Cold frames may also be used for this purpose; all that is really necessary to insure success with many of the species is to prevent severe freezing, which can be done by care in banking up the frames and covering with straw mats in the coldest weather, giving light and air during warm days. The cuttings will not strike root until warm weather, but will be in far better condition for this event than if not made until Spring. I have already made mine, but it is not too late, although every day it is delayed lessens the chances of success.

First Snow.—*Nov.* 16.—It is snowing, this evening, for the first time this season. Our first snow, last year, came on the 9th of November. We have had a most remarkably pleasant Autumn, and there are really no good excuses for not having all things ready for Winter. Still I see corn in the fields, apples ungathered, potatoes, cabbages and turnips exposed to the frosts, which should have been housed long ago. There are men who can never learn wisdom even from experience, and no matter how much they are favored, their work is always a little or a good deal behind, and losses occur far too frequently for their own good.

The Vineyard.

VINEYARD NOTES.

The Vintage in France will, we are assured, be small this year: first, owing to the unfavorable weather that prevailed early this Summer, and even lately in all the more important vine-growing districts; and, secondly, from the ever-increasing ravages of the Oidium and Phylloxera vastatrix—the depredations of which are spreading to such an extent in the South of France that only the other day M. DUMAS announced to the Academie des Sciences that in a few years the vineyards of Provence will have ceased to exist, if some means are not promptly taken to arrest its progress. He asked that a prize of £20,000 should be offered by the State to whomsoever should discover the means of efficaciously preventing such a disaster.

Field Crops.

DETERIORATION OF PASTURES.

THE following extracts are made from a prize Essay read before the New England Agricultural Society:

The causes of this deterioration of pastures are obvious, and a brief consideration of them will pave the way for a more thorough understanding of the remedies. The first and great cause is that farmers, like the horse leach, have been continually saying to the pastures, "give, give," and for the wool, beef and mutton given by the pastures, have returned no equivalent. Judging from the practice of the great majority of farmers, they must have the impression they are doing justice to the pastures when they keep their flocks and herds upon them day and night, so that the land receives all the excrement. They forget that this excrement contains only a part of the food consumed, and that a large fraction goes off in the milk and carcass of the animal, and that this balance against the land must in the course of years bring it and the land owner to poverty.

Milk and beef are at present the chief exported products of New England pastures; and a moment's consideration of the composition of these staples must convince the most thoughtless that neither Providence nor the pastures are to blame for the deterioration of the latter. One hundred pounds of average cow's milk contain:

Caseine	4 48 lbs.
Butter	3 13 lbs.
Milk sugar	4 77 lbs.
Saline matter	0 60 lbs.
Water	87 02 lbs.
Total	100 00 lbs.

The saline matter of milk consists principally of the phosphates of lime and magnesia, and the chlorides of potash and soda, and must all come from the soil, the air not being able to furnish a particle of it, though liberal in her supplies of organic food to plants. A herd of 20 cows, therefore, giving on an average 12 quarts of milk daily, will abstract from the pastures each day in their milk nearly 3 lbs. of earthy matter. This may seem a small amount, but as "a continual dropping will wear away rocks," so such a petty theft, practiced for an indefinite length of time, will wear out pastures. It must be remembered that this saline matter in milk is not of a gross nature, but constitutes the very essence of a good soil. How rich milk is in all the elements of animal life, may be inferred from the fact that man and all animals of the mammalia class live upon it in the earlier stages of their existence.

Where the rearing of young stock or the fattening of beef is the leading object of the farmer, the draft on the pastures is great, especially in the former case, in which the carcass of the young animal is to be built up. To form 100 lbs. of bone the animal will need to incorporate with itself:—

Gelatine	35 lbs.
Phosphate of lime	55 lbs.
Carbonate of lime	4 lbs.
Phosphate of magnesia	3 lbs.
Soda, potash and common salt	3 lbs.
Total	100 lbs.

Every calf, therefore, that is sold from the farm must carry off a very appreciable amount of inorganic matter. The fattening of stock, that have already attained maturity, is the least exhausting of any branch of farming. Such stock "make no bones" in growing fat, and hence their excrements are far richer than those of young cattle. Still the increase of muscle and fat must make some demands upon the pastures. To add one hundred lbs. to the muscular part of a full-grown animal requires:

Water	77 lbs.
Fibrin	22 lbs.
Phosphate of lime	¾ lb.
Other saline matters	¼ lb.
Total	100

The fat of animals is derived from their food, composed of the organic elements, oxygen, hydrogen and carbon, which plants derive from that inexhaustible resource of plant food, the air. Fat is almost identical in chemical composition with starch and sugar, and in these three compounds the oxygen and hydrogen are in the same proportions as in water, so that for simplicity we may say that they are composed of carbon and water. These elements are abundant in nature, so that in the production of simple fat there is no danger of great exhaustion of the soil of pastures.

FIELD NOTES AND QUERIES.

Sugar Beet in Virginia.—Mr. E. KEYSER, Thoroughfare, Va., writes us that, after having spent several years in Europe studying the culture and learning the mode of manufacturing sugar from the beet, he has taken up a tract of land to improve, and to make an experiment with this root. He has grown a very successful crop the past season. We shall be anxious to learn the result of his experiments.

A Preventive of Rust in Wheat is asked for by many farmers, and is being discussed in several of the Agricultural Clubs. The best method we have ever seen tried is thorough underdraining the land. We have never known a crop of grain to rust on such land; it may have done so, but we do not know it. Who does?

The Apiarian.

DRIED COW DUNG IN FUMIGATING BEES.

REV. L. L. LANGSTROTH writes the Bee Journal:—Nearly two thousand years ago, COLUMELLA recommended the dried dung of cattle as the best thing for fumigating bees. Learning, soon after importing the Egyptian bees, that the Egyptians made use of the smoke from this substance in all their operations upon their irascible bees, we began to use it largely in our apiary. The smoke from burning cow dung, while very penetrating, is not offensive. It can be blown so as to diffuse itself very quickly through the hive, and yet it does not seem to irritate the bees, and our own experience confirms the very strong commendations of COLUMELLA. Wherever rotten wood is not easily procured, it will be found of very great value. When thoroughly dried, it will burn slowly but steadily, and by slightly dampening the outside after lighting it, a piece not larger than the hand may often be made to last for several hours. It does not always ignite as readily as one could wish. Dr. E. PARMLEY has obviated this difficulty by dipping one corner in coal oil. The odor is so little offensive that it may be used instead of pastiles in the sick room, a little sugar being sprinkled upon it while burning. Those who know how universally the dung of buffaloes, called *buffalo chips*, is used for cooking purposes on our great plains, will feel no prejudices against this seemingly uncleanly substance. We shall call it *buffalo chips*.

BEE NOTES AND QUERIES.

Thoroughwort, or Boneset, as a Honey Plant.—About a year ago, I think I saw it stated that Thoroughwort, or Boneset, was an excellent forage plant for bees. I had a lot of it and some bees, though I had never watched their work upon plants. I desired to look more carefully after my bees, and I found that in August and September, when in bloom, the bees seemed attracted to, worked upon and gathered honey from it. The honey made from it is white and good. It is not flavorless—has the peculiar, though not offensive, flavor of the plant.—WILLIAM BLOSSOM.

Imported Italian Queens.—Would you advise a young apiarian to pay a large price for imported Italian queens, when he can buy pure bred native Italians much cheaper?—R. V. S.

No; the testimony we have from those who have both is that the native-bred queens are longer lived. It may pay those who make a business of breeding queens for sale to buy those imported; but the man who only desires to improve his stocks is as well off with a native bred Italian queen.

Italian Drones.—A correspondent asks if he can purchase Italian drones; if so, will they improve the stocks of native bees among which they may be introduced, even though the queens are natives? He asks for the experience of bee keepers. Some improvement will result, but it is not believed that it will be so rapid as in the case of breeding from Italian queens.

Cider as Fall Food for Bees.—I find that my bees linger around my cider-press as if they found something there they liked. I have not discovered that what they got there has injured them in the least, though I have watched them closely. I should like to know if others of your readers have made the same observations, and with what result?—P. P. R.

Dairy Husbandry.

CANADIAN BUTTER—HOW IMPROVED FOR SHIPMENT ABROAD.

A CORRESPONDENT from Canada writes us concerning the European butter trade. He says:—"I notice from your reports in the RURAL NEW-YORKER, in which quotations of prices are given for dairy products in London, that Canadian butter brings from 60s. to 100s. the cwt., while French butter sells at 130s. to 150s. Why is it that our best butter sells so much below the Normandy brands? What is the secret of Normandy manufacture, and can not something be done to raise the standard of prices in London for Canadian butter, etc."

We do not suppose the art of butter making to be any further advanced or better understood in France than in America. Indeed the American system of creameries embraces the best practice so far as butter manufacture is concerned. Good, sweet pasturage, clean, fresh water, and kind treatment to stock—cleanliness in milking and in handling the milk—the water system of setting the milk to maintain an even temperature—together with the usual plan of churning and working the butter as practiced at our best creameries—these are the main features for producing fine butter. There is nothing in the manufacture of French butter that is superior to American creamery manufacture; but one reason why Normandy butter brings such a good price in London is because it reaches that market as sweet and as full of flavor as when it leaves the hands of the dairymaid.

The great bulk of butter made in Canada comes from farm dairies, and is unequal in color, flavor and texture. Some of it, of course, may be of the very finest grade; and if it were packed in such a way as to reach London as perfect in flavor as when first shipped, it doubtless would command a better price than that named in our quotations.

What is greatly needed in Canada is a better system of packing than now obtains, and especially with that designed for the European markets. Butter, to keep well for any considerable time, must be excluded, as far as possible, from the air. The usual way of packing in tubs and casks will not do this in as perfect a manner as is required to ensure nice, fresh flavor. A better way is to surround the butter with brine on the plan of the White package. In this plan the tub is made very much in form of the old Welsh tub, except that it is more tapering. The staves are heavy, and heads are provided at both ends, so as to make a package that will not leak. In packing, the tub is turned on the small end, and a sack of cotton cloth is made to fit the tub, and into this the butter is packed, until it reaches to about an inch of the groove for holding the upper head. A cloth is now laid upon the top of the butter, and the edges of the sack brought over this and neatly laid down. Then the head is put in its place and the hoops driven home. The package is now turned upon the large end, and the sack of butter drops down, leaving a space on the sides and top. Strong brine is now poured through a hole in the small end until it fills all the intervening spaces. It will float the butter. The hole is tightly corked, and the butter is pretty effectually excluded from the air. Butter put up in this way, we know from actual experiment, will keep a year in sound condition, and we believe would cross the Atlantic and open as fresh in the London market as when it left the dairy on this side.

Experiments have been made in sending butter from California to our Eastern markets, packed in brine, and it came in prime, fresh condition, and altogether superior to the same kind of butter put up in dry packages. A favorite style of putting up butter in California is to make in two-pound rolls and wrap in thin muslin. Now, in shipping East, a new, stout oak barrel, iron-bound, was taken, and a large canvass bag made to fit the inside. Then the two-pound rolls, covered with thin muslin wrappers, were packed in upright layers, the head put in place, and the barrel filled with brine until the rolls were entirely surrounded with the pickle. The butter thus treated made the journey to New York without any deterioration in flavor, and we have no doubt it would have crossed the Atlantic in sound condition.

We see no reason why Canadian butter cannot be made to take a high stand in the English markets, and command a much better price than now obtains. We know, from our observation of Canadian dairy lands, that they have the requisites for producing good butter. What is needed most, in our opinion, is the introduction of creameries or butter factories where there shall be high skill in manufacturing, so that a uniform, fine flavored and good textured butter will obtain. Then, by adopting the "brine package," as we have suggested, or something similar, and shipping the lots as soon as made, or when fresh, Canadian dairymen will find no difficulty in realizing good prices.

We have tested hundreds of samples of Normandy, Irish, and other kinds of high-priced butter in the London market, and have found nothing better in flavor or texture than that manufactured in our best American creameries. The best grades of French butter are lighter salted than American. High salting is considered a defect in the London market, and if our correspondent is shipping butter abroad, this fact should be fully borne in mind. High salted butter, even though it be unobjectionable otherwise—in flavor, texture and color—will not command so good a price as it would if light salted. We have no doubt that the best grades of Canadian butter lose, in price, on this account, when reaching London; but a much greater loss is sustained from inferior manufacture and inferior packages.

ARTIFICIAL BUTTER.

THE French are ingenious in their preparations of food. They are most successful in the art of deceiving the palate with substitutes which cost less than the genuine article. Of this class of foods we suppose is that recently noticed in the Popular Science Monthly, and which originated from a request of the victualing department of the French Navy for some wholesome substitute for butter. To meet this request MEGE MOURIEZ, after a long course of experiments, has succeeded in producing an excellent substitute for genuine butter that does not become rancid with time, and is otherwise highly recommended. The following details of the process are given by the Monthly:

"Experiments made with cows submitted to a very severe and scanty diet led to the discovery that they continue to give milk, though in greatly diminished quantity, and that this milk always contains butter; whence it is inferred that this butter was formed from the fat contained in the animal tissues, the fat undergoing conversion into butter through the influence of the milk-secreting fluids. Acting on this hint MOURIEZ'S process begins with splitting up the animal fats. Finely divided fresh beef suet is placed in a vessel containing water, carbonate of potash and fresh sheep's stomachs, previously cut up into small fragments. The temperature of the mixture is then raised to about 112° Fahr., when, under the joint influence of the pepsin and of the heat, the fat becomes separated from the cellular tissue. The fatty matter floating on the top is decanted, and after cooling submitted to very powerful hydraulic pressure. The semi-fluid oleomargarine is thus separated from the stearine, and becomes the basis of the butter to be afterward produced. One hundred pounds of this oleo-margurine, along with about twenty-two quarts of milk and eighteen quarts of water, are poured into a churn, and to this mixture are added a small quantity of annotto and about three ounces of the soluble matter obtained by soaking for some hours, in milk, cow's udders and milk glands. The mixture is then churned and the butter obtained, after being well washed with cold water and seasoned, is ready for use. If required to be kept for a long time it is melted by a gentle heat in order to eliminate all the water."

DAIRY NOTES.

Dried Cream.—If your correspondent means white specks in butter, I can tell the cause. I have been in the butter business thirty years and have watched every crook and turn, change and effect, till I have found the true cause. Air does not hurt the cream in the least. If you skim the milk before it tastes tart, or as soon as the cream looks wrinkly, you will have no white specks; you can see the specks in the cream if it stands too long. If the weather is cold, turn in boiling water; if warm, a lump of ice two or three times a day. Some scald the milk; I think my way best; you will not burn your pans or fingers; the object of heating the milk is to get up heat enough so the cream will rise in thirty-six hours.

Churning.—Some spoil the butter before it comes from the churn. I use a crank churn, with a double zinc bottom, and a space so as to put in warm or cold water as required, and a thermometer attached, to show the degree of heat. No other churn is as good; do not churn till the right degree of heat is attained; then churn moderately. As soon as the butter comes, do not churn any longer than necessary, so as to get it in a lump sufficient to get it from the churn. I have seen butter churned too much as well as worked too much. —JOHN NORTH.

Arboricultural.

FALL PLANTING OF TREES.

I CANNOT let Mr. STORR'S communication in the RURAL NEW-YORKER of Oct. 26th, go unnoticed. He carries the idea, or rather wishes to, that Fall planting will be certain loss. So far as my experience and observation go, Fall planted apple trees are just as likely to do well as those planted in the Spring. The difficulty in Mr. STORR'S case is, his trees were good for nothing to commence with, which is plainly to be seen by his own acknowledgment.

In the fall of 1857 I planted 50 apple, also some pear and cherry trees, all of which lived and made from 12 to 18 inches growth the first season. Since that time I have set trees both in Fall and Spring, and could see no difference except in one instance in which my trees were like friend STORR'S—good for nothing. They were set in the Spring with much care, and nearly every one of them died. It would have been money in my pocket if I had thrown them away and bought good trees.

It is poor policy to try to grow an orchard from inferior trees; it is like trying to make a first-class cow out of a poor scallawag of a calf which you are quite confident will never live to hear the whippoorwills sing in May.

When setting any variety of fruit trees, I invariably cut all the bruised roots back to where they are perfectly sound, cutting the underside the shortest. The top is severely cut back, two-thirds, at least, and, in many cases, much more. While carrying the trees to the holes where they are to be set, their roots are kept covered with a piece of carpet or coffee sack well wet with water. In case of peach trees every limb is cut back to within a fourth of an inch of the body and the top cut back a foot or more according to the hight of the tree. Much care should be exercised that the holes be large enough, the tree set the right depth, the roots spread out and the soil well pressed among the roots.

Ransom, Pa. P. SUTTON.

ARBORICULTURAL NOTES.

Pecan Culture.—The New Orleans Picayune says:—Pecans would be more extensively produced in this State were the tree to come in bearing sooner from the planting. This tree often bears at the age of twelve or fifteen years, but it can hardly be said to be in full bearing under thirty years. The pecan can be grafted on the hickory, and brought in full bearing in less than half that time. A pecan tree in full bearing, if the fruit is of good quality, will sometimes produce fruit to the value of $25 yearly. Its average yearly product will not be under $10. Every such tree is worth more than $100 to its proprietor. Suppose a planter had started 1,000 such pecan trees thirty years ago. Those trees would now be worth $100,000, and the land would be valuable as a woodland pasture, thirty trees standing upon an acre. If every shade tree in every dooryard and on all plantations in this State were a full-grown pecan tree, bearing pecans of fine quality, their value to the State, compared to the value of property in 1870, would be greater than the assessed value of the city of New Orleans.

Alba Pyranthus Hedge.—Will some of the readers of the RURAL please give their experience with the "Evergreen Thorn," (*Alba pyranthus*), stating the age of the plants when planted, quality and condition of the soil, mode of planting and after-treatment, ability to withstand dronth, wetness, heat and freezing, with final results in forming a hedge horse-high, bull-strong and pig-tight; also its effects upon crops adjoining. I have a post and board fence running half a mile along the public road which I will renew this coming Spring, moving it from its present position a few feet, so as to plant the hedge where the fence now stands; being very much exposed to animals running at large, a good inclosure is necessary. Information on the subject is respectfully requested.—J. H. S., *Germantown, Ohio.*

Potash for Peach Trees.—At a recent meeting of the Cincinnati Horticultural Society, a Mr. SHEPARD stated that he had a peach orchard of 25 acres, the soil of which was poor, and was manured with potash only. One barrel, costing $35, or fifteen cents a pound, lasted him four years. He dissolved it in water, so that the lye would be so weak that a potatoe put in would not quite come to the surface, and then applied two quarts of this liquid close around the trunk every Spring. From 2,000 peach trees he had sold during the past five years $12,000 worth of peaches. His crop has been in 1867, 1,500 bushels; in 1868, 680 bushels; and last year, 1,800 bushels. He had also a good prospect for a crop this year, the buds being nearly all perfect.

Peaches Ripening Unevenly in Indiana.—I saw an article from a Jerseyman concerning a peach tree not ripening all of its peaches at the same time. I had a peach tree this season one part of the fruit on which ripened the first of August; the remainder Sept. The tree was fine and healthy; bark smooth; no signs of decay; the tree was never budded. I am over fifty years old, was raised on a farm, and experienced with fruit trees to some extent, but never saw the like before upon a healthy tree.—F. H., *Rising Sun, Indiana.*

Entomological.

INSECTS SHAPED TO THE NEEDS OF FLOWERS.

THE flowers of the Yucca plants are peculiary constructed, so that it is impossible for the pollen to reach the stigma, it being glutinous and expelled from the anthers before the blossoms open. It has been, therefore, the opinion that the plants must needs rely on some artificial agency for fertilization. Professor C. V. RILEY, of St. Louis, has lately discovered that the work is done by a small white moth which he calls *Pronuba Yuccasella*, an insect which forms the type of a new genus. It is most anomalous, from the fact that the female only has the basal joint of the maxillary palpus wonderfully modified into a long prehensile spined tentacle. With this tentacle she collects the pollen and thrusts it into the stigmatic tube, and, after having thus fertilized the flowers, she consigns a few eggs to the young fruit, the seeds of which her larvæ feed upon. The Yucca is the only entomophilous plant known which absolutely depends for fertilization on a single species of insect, and that insect is remarkably modified for the purpose. The plant and its fructifier are inseparable under natural conditions, and the latter occurs throughout the native home of the former. In the more Northern portions of the United States, and in Europe, where American Yuccas have been introduced, and are cultivated for their showy blossoms, the insect does not exist and consequently the Yuccas never produce seed there. The larva of the *Pronuba* eats through the Yucca capsule in which it fed, enters the ground and hibernates there in an oval silken cocoon. In this stage the insect may easily be sent by mail from one part of the world to another, so that seed may be obtained from American Yuccas here without any trouble on the part of the gardener, simply by importing the *Pronuba* cocoon.—*London Garden.*

Bark Scale.—I would be glad of some suggestions from you, through the RURAL NEW-YORKER, regarding the bark scale, which has made its appearance in my pear orchard this year to an alarming extent. I can manage those on the trunk, but how to get rid of those on the branches among the brittle fruit spears, I cannot imagine. Please answer at your earliest convenience, and oblige—W. W. CONOVER, JR.

WE do not know of a better way to get rid of the various species of insects known as bark lice or scale, than to prune the trees severely in winter and give the stems and branches a coat of whitewash in June, about the time the young lice are hatching. Strong, soft soap, with ashes mixed in sufficient to make it the consistency of thick paint, has been used with good effect. There is little use in applying anything except at the time we have named, then it should be done in the most thorough manner possible.

Sheep Husbandry.

KEEPING OLD SHEEP.

The following suggestions and advice from the American Stock Journal are timely. The capacity of each animal to consume food, the market value of the food it will consume during the Winter, and the probable value of the animal after it has been wintered, should be taken into account in determining what stock he will Winter, by every farmer. Thousands of animals, however, are fed at a loss, the farmer wasting his substance upon them for want of a little calculation. Here is what the Journal says:

About one-half of the farmers who keep sheep manage to have a lot of old run-down ewes every Fall, either sell at a trifle for pelters or die during the Winter.

This is bad economy, to say the least, and should not be tolerated, and by a little timely forethought might be greatly remedied or entirely avoided.

Now is the time to attend to this matter. Look over your flock and select out all such as do not seem to be doing right, and put them by themselves on as good pasture as can be afforded, and when it begins to fail or has been touched by the early frosts, give a little grain, no matter what sort—and by degrees increase it, so that by the time Winter sets in they will be in good condition for Winter feeding, and, if regularly cared for, will be fit for the butcher by early Spring.

Sheep should never be kept until they lose their teeth; a very little observation and practice will enable any person to tell their age by the front teeth, and, for the benefit of those not posted in this art, we will give a description of the teeth at the different stages of their growth and decline, so that all may learn, as we once heard of a person who went to buy a flock of sheep, pronounced them all too old from the fact of having no teeth in their upper front jaw. Perhaps he has learned before this that they never had.

A full-grown sheep has thirty-two teeth—eight incisors in the lower front jaw and six molars in each side in the upper and lower jaw. The lamb at birth has two incisors passing through the gums. When about a month old it has eight comparatively short, narrow ones. At about a year old, sometimes a little more, the central, or "lamb teeth" are shed and replaced by two broad teeth. The lamb teeth continue to be shed annually and replaced by broad teeth, until the sheep has eight incisors of second growth, when it is full mouthed, which is at the age of four years.

At six years old the incisors generally begin to diminish in breadth and lose their fan-like shape. At seven they become long and narrow, stand about perpendicular with respect to each other, and have lost their round, cutting edge, and so continue to diminish until at about the age of ten years they become loose and begin to drop out.

So long as a sheep is healthy it can be fatted, but it is not good policy to keep them until they become too old, as it has a tendency to run down the flock and give it a rakish appearance.

Therefore every farmer should look carefully over his flock early every Fall, and select out such as cannot be kept longer with profit.

THE RAM "TORRENT"

Was bred by F. H. Dean of Cornwell, Vt. He was got by "Little Wrinkly," bred by Edwin Hammond, by "Sweepstakes." His dam was bred by F. H. Dean, and got by Stowell's "Golden Fleece;" grand dam bred by Edwin Hammond. He is now five years old, and his fleeces have weighed as follows:—first, 16 lbs.; second, 21¼ lbs.; third, 23½ lbs; fourth, 28¼ lbs.; fifth, 29 lbs. We have recently seen and examined "Torrent" and his stock of different ages. Our portrait of him is a good one. He is a heavy ram, low, compact, and exhibits all the evidences of a most hardy constitution. His stock strongly partake of the qualities of their sire.

NOTES AND QUERIES.

Wool in Australia.—The Queensland thinks the prospect for wool-growing in Australia is better than ever before. The yield is large and the flocks are in good condition. The quality of the clip satisfied buyers, and the wool now finds a market where it never was sold before. It thinks the countries in South America have reached the limit of wool production.

A Wisconsin Wool Grower's Clip.—The Western Farmer, Oct. 12, says:—"Eli Stilson, Esq., of Oshkosh, Wis., this year sheared, in round numbers, 1,700 Merino sheep, the clip being 7,136 pounds, which was sold at 56 cts. per lb., giving a total of $4,096. Mr. S. has a little over 2,000 sheep.

The Garden.

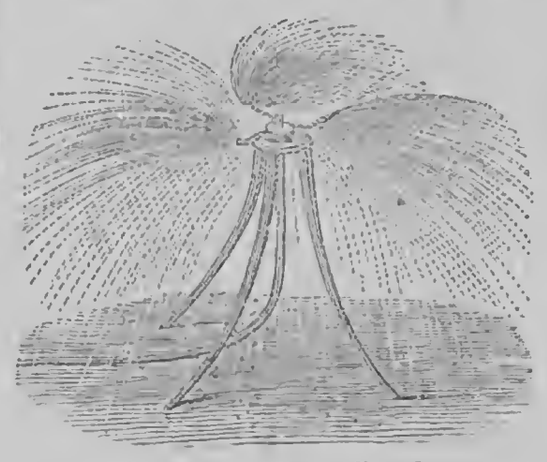
MARKETING GARDEN PRODUCTS.

Here is a hint as to the profit and policy of bringing the buyer and producer of garden products together, especially in the smaller towns and cities, which we find in an essay on Market Gardening, by J. B. Root, Rockford, Ill. It is a system which will commend itself to the consumer. It will save the time incurred in going to market, and the labor or expense of getting the purchases home. It also is more likely to insure the family fresh vegetables, when

Novel Watering Pot.

otherwise the huckster, with a supply left over from a previous day's purchase, neglects to replenish his stock and forces the wilted, sun and dust-exposed products upon the consumer:

Here is what Mr. Root says:—When we entered upon gardening we intended to wholesale all our crops to the dealers. For a few weeks, while fresh early vegetables were still scarce, all went "merry as a marriage bell," but as soon as our main



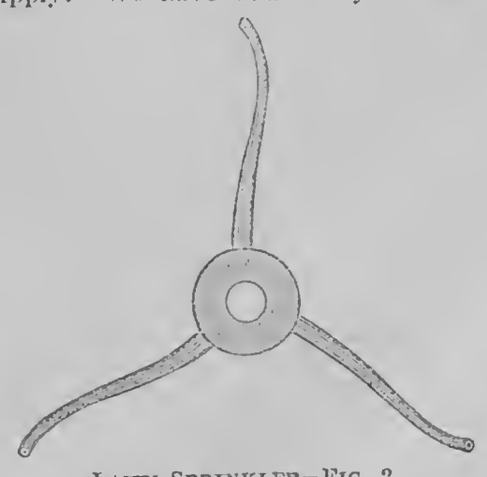
Lawn Sprinkler—Fig. 1.

crops began to come in, so did everybody's else, and not only did the prices go below a living profit, but dealers who befor were glad to pay any price, would not take them at the lowest rates,—some farmer had brought in a lot and would take his pay in trade, or a friend had spoken for his patronage, etc., etc." Chicago market was no better, and we had to thank the commission men that they did not call on us for a bonus above the proceeds of the sales to pay percentage and the expenses. Crops began to accumulate on our hands; something must be done, and that quickly, or it would be all over with our little venture of twenty acres. We noticed one marked peculiarity of this flooding the market in our city; the consumer was paying all the while nearly or quite as much as before, and it occurred to us that if we could sell at that price our little venture would be safe.

Accordingly, early one morning we started out a salesman with a good load, under instructions to seek retail sales from hotels, boarding houses and private families, with a promise of daily calls if sufficiently patronized. At noon he returned with an empty wagon, and the proceeds, not only the wholesale price but also the retailer's profits, which usually range from 25 to 50 per cent. From that day to this, nearly four years, we have pursued the same course and now keep three and sometimes four wagons going through the season. True this is a considerable expense, but the retail profits more than pay it, and we secure what is so necessary for success in gardening—a certainty of a paying market.

I am confident that outside of the immediate vicinity of Milwaukee and Chicago no other way of marketing his products will insure the gardener such liberal and such certain results. Shipping to a distant market is very rarely profitable, and always risky. First, the expenses are heavy—careful packing, cost of packages, exhorbitant freight and commission all come from the lowest wholesale price, often of a flooded market. Then again even with the greatest care in packing, unfavorable weather, bad handling and storage will cause large quantities to heat and spoil, and then you not only lose the crop, but added thereto all these expenses and an additional charge for carting them to the river. Whereas with our method of marketing we avoid all these expenses and obtain the highest retail price, and never yet failed to sell our crop.

Each soon secures as many ready customers as can be called upon in a half day, who are glad to give their patronage, provided they can be assured a daily or tri-weekly supply. We have had many customers



Lawn Sprinkler—Fig. 2.

seed down their own gardens under such assurance, and have never yet lacked for buyers. The best salesmen we have had were Swede boys from 17 to 20 years old. They are quiet, attentive, honest and ambitious to improve, and yet work for moderate wages, and have proved more serviceable than mature Americans of considerable business experience and ability whom we have employed. The first half of the year the sales are all made in the forenoon, and afternoons horses and hands go to the fields. Later in the season the wagons run all day.

A LAWN SPRINKLER.

A Californian sends to a Scotch paper a lawn sprinkler much used there, The Scotchman illustrates (see Figs. 1 and 2) and thus describes it. Fig. 1 shows the complete machine—"a light tripod, about three feet high, supports a revolving head, which consists of three armlike tubes (see Fig. 2,) attached to a hollow washer that plays around the tube to which the hose is attached, bringing water from a head. The arms are turned a little backward and upward, and the water as it flows out causes them to revolve, flirting a fine spray over a circle of from 10 feet to 30 feet in diameter, according to the pressure of the water. We are using ours with a head of about 15 feet, and it covers a diameter of 20 feet. When this area has been well watered, the machine is moved to new ground. It requires but little attention from a man working in its neighborhood, and is a very useful affair in dry weather. An ingenious plumber could make one (mainly of gas-pipe) without much expense." We give these now, that our readers may, if they choose, during the Winter, provide themselves with this sprinkler.

GARDENERS' NOTES.

Novel Watering Pot.—Here is a good idea for some American manufacturer—a watering pot with a long rose, by which a bed twelve feet wide (if the rose is made long enough) can be watered without treading upon it, or having to lift the pot in extra hight. No swinging is necessary as with the ordinary pot. The streams of water cannot unite and fall in a heavy body as with the ordinary watering pot. It is an English invention, and they are made of strong zinc, and are, therefore, durable if cared for.

A Large Hercules Club Squash.—I raised a Hercules Club (gourd) from seed obtained from Mr. Vick, which is three feet seven inches in length, and weighs 26 lbs. It did not attain its full growth in consequence of frost which (unfortunately for us in this part comes too early in the fall) killed the vine. But thinking it "some pumpkins" here, I would ask who of the readers of the Rural can beat it?—John D. Phillippi, *Jeff. Co., Pa.*

To Destroy the Cabbage Worm.—I have been entirely successful the past season with the following:—Diluted mackerel brine, applied on and around the plants, three or four times a week, until the cabbage begin to head. In my garden, all that I treated in this way made good, sound heads, and others in the same patch were destroyed.—S., *Portlandville, N. Y.*

Peas in Winter.—I planted, in October, in a box four feet square, in my sitting-room, some small dwarf peas that are very prolific (I do not remember the name) and the middle of January I had a crop of peas sufficient to make a family of three a good meal, beside the pleasure of the green growing in my room.—Mrs. P. S. Y.

Toads in the Garden.—English gardeners pay two shillings per dozen for toads to keep wood-lice in check in their gardens and frames.

The Sportsman.

NOTES FOR SPORTSMEN.

How to Trap Gophers.—A correspondent asks the best way to trap Gophers. This is the way a Kansan does it:—Get a common steel trap; whenever you see fresh work, excavate a hole in the bottom of the run large enough to place the trap, with the pan level with the bottom of the run; cover the trap by sprinkling pulverized dirt lightly upon it; fasten the trap to a stake with a chain or wire, which should also be covered with dirt. If the run is left open by the Gopher, cover the opening with a board, making all dark. If closed by the Gopher, leave the hole open.

How to Trap Muskrats.—I use a steel trap; find a muddy spot near the rat's hole, make a pen of sticks driven down close together, leaving an opening in front just wide enough for the trap; put the bait (which should be sweet apples) in the pen far enough so that the animal will have to step over the trap in order to get at it.—W. A. S., *Evans, N. Y.*

Pisciculture.

SALMON TROUT CULTURE.

GEO. G. COOPER, Esq., of the Rochester Union and Advertiser—who is one of the Fish Commissioners of this State, and therefore well advised—gives the following interesting data concerning the operations and progress of SETH GREEN in stocking the inland waters of New York with Salmon Trout:

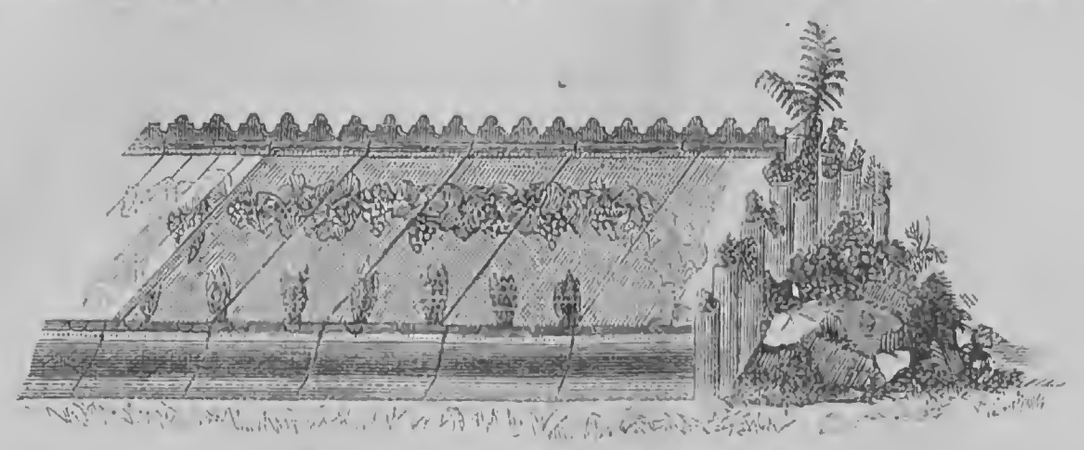
Notice has been made from time to time the present Fall of the operations of SETH GREEN, Superintendent of Fisheries, in taking Salmon Trout from the waters of Lake Ontario for the stocking of the waters of this State. Mr. GREEN engaged in the work this season with a purpose to procure a very large stock of the ova of this excellent fish, and we are pleased to state that he has been successful. In the latter part of September he repaired to the islands near the Canada shore of Lake Ontario and prospected there on the Salmon Trout grounds, with a view to begin extensive operations as soon as the spawning season should begin, which is about the 15th of October. He applied to the fish authorities of the Dominion and they promised him all the assistance he might require. They sent out orders to all the fish wardens on the coast to see the licensed fishermen in their respective districts and direct them to aid Mr. GREEN in his undertaking. This order was willingly complied with and both wardens and fishermen have been very kind and obliging through the entire season. To PETER KIEL, fish warden on Wolf Island, Mr. G. acknowledges his indebtedness for many favors. Mr. GREEN located two depots from which he would operate, one at Presque Isle, directly across the Lake from Rochester; the other at Cape Vincent. He then stationed gangs of men at several fishing stations on certain islands, who were to go out in the fishing boats to the nets and manipulate the fish. Wolf Island, a few miles from Kingston, was one prominent place for operating. The process of obtaining the ova is about as follows:—The nets in which the fish are captured are located from one to ten miles from shore. They are visited daily by the fishing boats. When the nets are taken up Mr. GREEN and his men select from the fish such as are ripe for manipulation. The spawn are put into pails in the boats, and properly treated. The water in the pails is changed often, and the utmost care taken to preserve the ova. This is done sometimes when the sea is running high and the little fishing crafts are pounded by the waves. When the boat goes to shore, the ova in pails is transferred to a sail boat or tender, which conveys them to Cape Vincent. They are then placed in the shad hatching-boxes and put into the St. Lawrence to remain a day or two, until a sufficient quantity has been obtained to make it an object to remove them to the State Hatching House at Caledonia. In this way the work is carried on at different points on the Lake. From Presque Isle the spawn is brought across by steamer to Rochester. From Cape Vincent it comes by rail. In both cases the spawn are put in large tin cans and attended by an experienced man, who watches closely the temperature and condition of the water and changes it as circumstances demand. The slightest neglect might result in the loss of all the ova in a can.

It will be understood that Mr. GREEN makes contracts with the owners of nets and boats that he may go out with them, or send his men, and take the spawn. He has nothing to do with the fish which are taken into the markets and sold by the fishermen.

The weather has been quite stormy this season, but the catch has been good, and all the ripe fish have been taken that could well be manipulated. Each female fish produces about five thousand eggs and the raising of a net will often bring thirty such.

The season for spawning closed this year about the 10th (Nov.), and at that date Mr. GREEN had taken all that he could develop with his facilities this Winter. He estimates the number of eggs he has now in hand at *three millions*. These eggs are now safely deposited in the State Hatching House on the beautiful Spring Creek in Caledonia, eighteen miles from Rochester.

The process of developing fish at the State establishment has been often explained, but we will briefly note the course that will be taken with this Salmon Trout crop just harvested. The ova, as fast as they arrive at the house, are deposited in the hatching troughs, which are long boxes in which is gravel, over which the clear spring water is constantly flowing. The progress of the work of development is closely watched by experienced men for weeks, until it is complete. It requires about seventy days in water at a temperature of 45 degrees to bring out the fish. In about forty days after the fish appears he will have attained sufficient size to take his place in the lakes of this State and take care of himself. All through the period from the instant the egg leaves the parent fish till the young fish is set at liberty, the process is watched with the utmost care, that it may be successful. Mr. GREEN has studied this process so thoroughly that he rarely fails of success. He will turn into the waters of the State this Winter three millions of excellent Salmon Trout as the result of his operations in respect to a single variety of fish. What he is doing in relation to other varieties must be left for notice at another time.



EARTHENWARE HOT-BED FRAME—FIG. 2.

Rural Architecture.

EARTHENWARE HOT-BED FRAMES.

THIS is a cheap and effective combination of glass and earthenware for horticultural purposes, wherein is obtained complete facility for perfect ventilation, without removal of the glass, or risk of fracture. The sides of the frame (Fig. 1) are formed of chairs or slabs of terra cotta or earthenware, somewhat of an L section, with a recess at the top to receive the glass, set side by side, and in pairs at suitable distances apart. At intervals, angle pieces, doweled at the ends and securely fixed to the chair tiles, support a light double wooden ridge, the opening in which thus admits of ventilation, throughout the length of the frame; being also closely fitted with bevel-ended earthenware caps, any one or all of which are readily removed and replaced, Thus not only is there adequate provision for easy ventilation, but on the removal of the cap, any one or more of the glass sheets can be removed to permit the plants to be watered. The ends of the frames are closed by means of half round hollow earthenware tubes (Fig. 2) of varying lengths, arranged so as to form a kind of gable end, to which an ornamental appearance can be given by filling the tubes with mold and planting ferns and other suitable plants therein. These frames, says the Mechanics' Magazine, are useful and ornamental as garden accessories, and are well adapted for every description of flowers, vegetables or fruit, or as forcing pits and frames when placed on sunk brickwork or heated by a system of pipes with hot air or water.

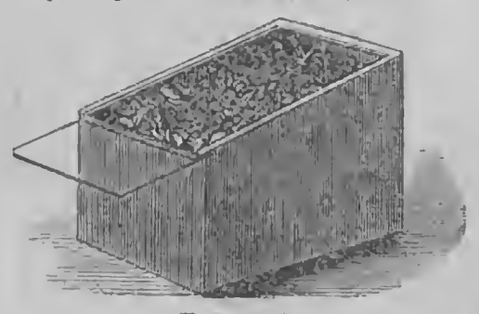


FIGURE 1.

The same principles, on a smaller scale, are applied in the cover, (Fig. 3), made of red earthenware with sloping glass covers. The propagating box (Fig. 4) is made of the same material. These improvements are the designs of BENJAMIN LOOKER, and were lately exhibited at the Horticultural Exhibition, Birmingham, England.

NOTES FOR BUILDERS.

Plaster a Protection from Fire.—After the conflagration in Paris, it was generally found that with good plaster work over them, beams and columns of wood were entirely protected from the fire. In cases where limestone walls had been utterly ruined on the outside by the flames passing through the window openings, the same walls, internally, escaped almost unscathed, owing to their being coated with plaster. On many such plastered walls the distemper decorations were still to be made out. The iron roofs rendered good service, and the party walls of each house were carried up right through the roof—a most important precaution, for otherwise nothing could have prevented the disastrous conflagration from being more extensive than it was. It was also found that good wood-work in beams and posts, good wood floors, well pugged, and good wooden staircases, were safer and more to be depended upon than cast iron columns and stone staircases, landings, and floors. Stone staircases well protected by plaster were fireproof, although not so safe as wood in case of heavy *debris* falling upon them.

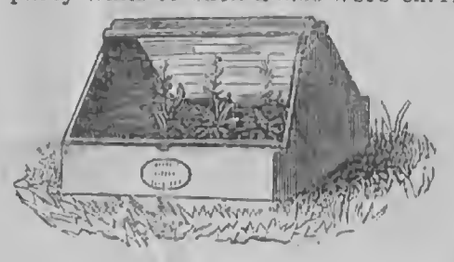

FIGURE 3.

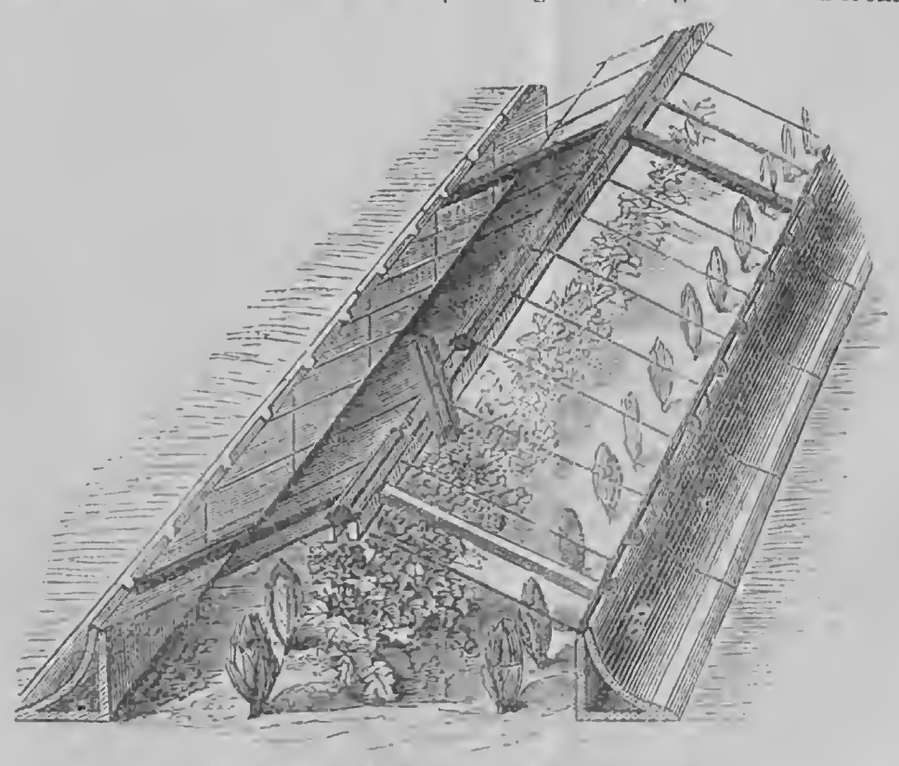
School-House Doors in Wisconsin.—The American Builder says:—The Wisconsin Legislature did a wise thing during its last session in providing that all doors for ingress and egress to and from public school-houses and other public buildings should open outwardly. It is to be hoped that similar action may be taken by the legislatures of other States during the coming winter sessions."



EARTHENWARE HOT-BED FRAME—FIG. 4.

Pomological.

POMOLOGICAL GOSSIP.

Matilda Strawberry.—CHARLES DOWNING writes the Horticulturist as follows: In the June number of your paper you speak unfavorably of the Matilda Strawberry, which originated with O. J. TILLSON, of Highland, N. Y. You also quote A. S. FULLER as saying that "it is splendid in every respect except quality." Having visited Mr. TILLSON'S grounds when the fruit was in perfection, I had a good opportunity to examine them, and differ with Mr. FULLER and yourself as to quality. To my taste they are of the class very good or the best, and compare very favorably with the newer varieties, such as Seth Boyden, President Wilder, Chas. Downing, etc., and being large, productive, good color and quite firm, they promise well at least. At my request Mr. TILLSON has furnished me with a statement of prices as compared with the Wilson, and taken from the commission merchants' bill in New York, which please insert:

	Matilda. per qt.	Wilson. per qt.
June 8	45 cts.	24 cts.
" 10	36 "	22 "
" 14	21 "	16 "
" 15	15 "	10 "
" 17	27 "	20 "
" 20	27 "	18 "
" 21	24 "	18 "
" 22	24 "	16 "
" 23	24 "	15 "
" 24	24 "	18 "
" 27	30 "	18 "

You will see by this statement they average a little more than one-third more per quart than Wilson.

Pears Rotting at the Core.—A correspondent of the RURAL NEW-YORKER writes us in condemnation of a pear which he says "has been greatly praised, but is worthless because it rots at the core." If he had read the RURAL NEW-YORKER carefully he would have learned that many varieties have been condemned for that reason, which are nevertheless excellent and profitable varieties, and are approved by the oldest pear growers. The fault is not in the pear but in the grower. He does not pick such pears soon enough. *They must never be allowed to ripen on the tree.*

Bush Alpine Strawberries.—We cannot inform J. E. MCDONALD where he can purchase the Bush Alpine Strawberry plants, which were mentioned in the RURAL NEW-YORKER Oct. 26, page 269. If any of our strawberry growers have the plants for sale, we think it would pay them well to advertise in our columns, as we have had many inquiries for these plants.

The Poultry Yard.

POULTRY NOTES AND QUERIES.

Gapes in Chickens.—W. B. TEGETMEIER, a well known English writer on fowls, writes the London Field:—The fatal disease caused by the presence of the gape worm, appears unusually prevalent. I have had it in my own runs, where it has attacked some Sebright bantams; but I have found no difficulty in curing it by the means of carbolic acid, which I first recommended for this purpose in The Field of last year. So potent are the fumes of this powerful remedy, and so destructive are they to parasitic life, that their inhalation for even a few moments seems perfectly effectual in destroying the life of the worm. It is not even necessary to employ any special apparatus; a few drops of carbolic acid may be placed in a spoon and held over the flame of a candle until the vapor is seen to rise, when the head of the young chicken or pheasant (held in the other hand) may be placed in the vapor, which the animal is forced to inhale. Care must be taken not to carry on the process until the fowl as well as the worms are killed. I find after exposure to the fumes for a few seconds the bird may be regarded as cured, and may be seen running about quite well on the following day; if not, the treatment should be repeated. The medicinal carbolic acid is preferable to the tarry liquid used for disinfecting sewers and drains.

Sick Chickens.—Can any of our readers tell me what to do for my Brahma pullets? I have had a number of them taken sick; they neither die nor get well. Their necks are drawn on one side; comb and gills are very pale. They are dull in their movements, and eat but little.—C. R. B.

The Horseman.

THE PERCHERON HORSE.

THE RURAL NEW-YORKER has recorded the arrivals at this port, the past season, of several importations of this breed of horses, which is deservedly attracting the attention of those who desire a heavier draft horse for both the farm and road. A writer in the American Stock Journal who has a stallion of this breed, thus writes:

If the success of my Percheron as a stallion is any evidence of the value of the breed, I can state that he has averaged eighty mares per season for the ten seasons he has made in this country, and as he is a very sure foal getter, he must have produced at least 500 colts; and as I have never yet heard of a colt of his that would not bring $100, and many of them much higher prices, you can judge of the benefit which has accrued from his services. I have yet to learn that he has produced one worthless colt, nor have I heard of one that is spavined, curbed, ring-boned, or has any of those defects which render utterly useless so large a number of the fine-bred colts of the present day. The opinion of good judges here is, that we never had, in this part of the country at least, so valuable a stock of horses for farming purposes; and further, that no horse that ever stood in this section of the country has produced the same number of colts whose aggregate value has been equal to that of the colts of my Percheron; for the reason that, although there may have been individuals among them which would command a much higher price than any of those of my Percheron, yet the number of blemished and indifferent colts has been so great as quite to turn the scale in his favor.

My Percheron has not been crossed at all with thorough-bred mares—such a thing is almost unknown here at the present day; but those mares the nearest approaching to it have produced the cleanest, neatest, and handsomest colts, though hardly large enough to command the best prices. Those I know of that cross are excellent performers.

The style of mares with which the Percheron breeds best, appears to me to be the mare which you would choose to breed carriage-horses from, with a good length of neck, and tail coming out on a line with the back, to correct the two prominent faults in form of the breed, the short neck and steep rump.

What is the result of the cross with different styles (as regards size and shape)? This may be answered in a general way by stating, the size will depend somewhat upon the size of the mare, with due allowance for casting after back stock, which will be well understood by breeders. As regards to shape, you may depend upon the predominance of the form of the horse in nine cases out of ten.

REMEDY FOR HORSE INFLUENZA.

THE people never really know the value of a limb until they have lost it. This fact is practically illustrated with the present epidemic among horses. Almost all who have been obliged to walk in place of riding in the street cars, now speak of the great value of horses, especially to the business community. My own love for so noble an animal leads me to send you the following, which has been found practically efficacious in curing some of the worst cases. The disease is simply influenza, and should be treated as such. The atmosphere only is involved in producing it. The cause of its attacking the horse and leaving other animals and man untouched, would occupy too much space in your paper, and I have not now the time to give it in full, but may do so at some future time. Common pine tar, one quart; powdered camphor, one oz.; do. saltpetre, one oz.; do. sulphur, one-half oz.; do. lobelia herb, two oz.; do. mullin leaves, two oz.; pure carbolic acid, a teaspoonful; mix well together; then make any iron dish quite hot; put about a tablespoonful of the above mixture into it. Throw a blanket over the horse's head and place the dish under the blanket, so that the horse may inhale the fumes of the compound. This should be done about four times a day, or oftener, according to the severity of the case. I then give the following internal remedy:—Powdered lobelia herb, 1 oz.; do. elecampane, 2 oz.; do. coltsfoot, 2 oz.; do. spikenard, 2 oz.; do. blood root, ½ oz.; do. slippery elm, 1 oz.; do. gum myrrh, 1 oz.; do. skunk's cabbage, 1 oz.; do. wild turnip, 1 oz.; mix all thoroughly together; then mix the whole with molasses into a thin paste, and add one gill of good vinegar. Of this mixture give the animal one tablespoonful every hour until improvement takes place: then extend the time between the doses to two and three hours. The animal should have hard wood ashes, salt and willow charcoal mixed with his food. The charcoal may be obtained at the druggist's.

DR. THOMAS J. LEWIS.

290 West Madison street, Chicago, Ill., Nov. 15.

NOTES FOR HORSEMEN.

The Horse Epidemic South.—This fearful disease has at last made its way to the land of "flowers." Georgia is now among the crippled agricultural States. Cotton wagons are left standing in the road on their way to market. Wheat culture will have to be postponed, ginning by horse power stopped; turn-outs called in, and all things that horses are connected with, will soon be brought to a stand still. The people of this section of the country ask for a preventive. Will not some learned stock dealer relieve our troubled minds? Will not the RURAL help us? Is it fatal? By answering the above imploring request you will relieve us of great fear.—C. F. G.

WE know of no preventive; the RURAL has published already the best remedies known. The chief thing is absolute rest until fully recovered; and the animals must be kept warm. There are few fatal cases where rest is given; where animals have been worked before recovering, or have been exposed to cold or storms, dropsy has followed with fatal result.

Chronic Glanders are said not to be contagious. A veterinarian in the Kansas Farmer recommends the following treatment:—"To remove or neutralize the poison, give one-half to one ounce doses of the sulphate of soda, at night, in cut feed, for several weeks, and five grains of the powdered Spanish fly along with it, which will act not only as a powerful tonic, but as an agent whereby the product of the disease will be removed from the body of the animal by the kidneys. This treatment will not interfere with the other medicine, which is—powdered gentian root, three drams; powdered sulphate of copper, two drams; mix, and give the whole for a dose, and give one dose morning and mid-day. The horse must be well and highly fed, and removed from other horses while the treatment is going on. Change the feed often. Remember that glanders, associated with tubercles of the lungs, cannot be cured."

Dropsy and Glanders now prevail among the horses in this city that have recovered from the late epizootic which has so seriously affected our business interests. The deaths among horses are almost entirely in consequence of one or the other of these diseases. Horses apparently in perfect health at night are found in the morning with legs and body swollen to an astonishing degree. In some of the stables more horses have died from these diseases than from the influenza from which most of them have apparently recovered. It is found, however, that most of the deaths from dropsy are among horses that were worked or exposed while ill of influenza—that those most carefully nursed and allowed to rest develop no indications of these supplementary diseases.

To Fit Collars to Horses.—The Valley Farmer says collars are or should be so made, as to throw the chief force on the lower part of the shoulder. The horse can apply but little strength on the upper part, and for this reason breast collars are coming greatly into vogue, as the strength is exerted on the lower part of the shoulder. The collar should be purchased of the proper size; just before putting it on the first time, immerse it in water, letting it remain about a minute, and immediately put it on to work. The collar, by being wet, will adapt itself to the shoulder, and should dry on the horse. When taken off it should be left in the same shape it occupied on the horse, and ever after you will have a snug-fitting collar and no wounds.

A Stifled Horse.—Can you recommend anything that will benefit a stifled horse? asks a correspondent of the RURAL NEW-YORKER. Not anything that we have ourselves tried, but a correspondent of the N. Y. Tribune says:—"For a stifled horse, rub a teaspoonful of turpentine, night and morning, half way up the crease by the tail on the lame side. Keep using the horse as usual, and in three or four days a cure will be effected. For scratches or grease heel, wet the part frequently with water in which blue vitriol has been dissolved."

Farm Economy.

"PILING FOUR ACRES ON ONE."

SOME of the Southern farmers are getting the key to the true spirit of Agricultural improvement. The better class of these planters are of the thinking and reasoning sort. Necessity is forcing them to conclusions which are worthy of a wide circulation. For instance, a correspondent of the Georgia Plantation says:

To enable the farmer to buy less and sell more, let him put three acres of land on the identical same spot where he now has but one, with a spade, or a four-horse plow. A German or Englishman would do it the first year. Did not a man (Englishman) near Athens, sell fourteen hundred dollars worth from less than three acres? He did it by piling four acres on one.

The example of one man goes far in the education of the people. A man buys three acres of land instead of fifty and makes them produce more than the fifty would by ordinary culture. What does he save? He saves the money he would have invested in the forty-seven acres. Suppose he pays, or agrees to pay, $20 per acre for fifty acres; it amounts to $1,000. Instead he buys say five acres, for which he pays say $30 per acre, or $150. He has a cash capital left of $850, which he can make available and active. He may not have the capital to work the fifty acres as he would the five. Few men have. But by the use of his reserved capital he makes his five acres produce as much as twenty acres of his fifty; and few farmers with fifty acres cultivate more than twenty-three, unless near large cities; even then they cannot do it well without a large cash capital. With the five acres and the $850 capital a man may secure all the tools, manures and labor that may profitably be employed on five acres. Everything is utilized. There is no dead capital. Every dollar as it is turned over produces another. Every crop is under control. The ground can be prepared for the seed as and when it ought to be; the crops can be cultivated and harvested when and as they ought to be. Out of the investment come returns which bring to the farmer the maximum profit.

There are circumstances and conditions where this policy does not seem to be the best—especially in locations where land is rising in value or where it will rise in value in proportion to every dollar expended upon it for improvements. Then the farmer may reap more profits from his investment in fifty acres than in five. But on lands which have reached their maximum value it is folly to spend the bulk of one's capital in them and cripple his resources for rendering them productive. As a rule, we think, two-thirds of a farmer's cash capital should be reserved for use on land purchased with the other third.

SUBSOILING IN THE FALL.

A CORRESPONDENT of the RURAL NEW-YORKER asks if we recommend subsoiling stiff soils in the Fall as late as November. We do. We prefer plowing and subsoiling (and trench plowing, too) stiff soils in the Fall to doing it in the Spring. Suppose it is full of water. Lands that freeze are benefited thereby more than they are injured. The fertilizing properties the water furnishes the soil, the aeration which results, and the chemical changes produced by freezing and thawing do not deteriorate the producing powers of the land. We do not recommend trench plowing stiff clay lands in Spring for Spring crops under any circumstances. Spring subsoil plowing for almost any crop is safe enough; but Fall subsoil plowing is, in our opinion, always better.

ECONOMICAL NOTES.

Letting Cider Remain in Pomace.—A correspondent of the Scientific American says:—"To obtain good cider, the expressed juice must remain a short time with the pomace, which has been crushed or bruised, not cut, as is done by most patent cider mills. The old mills bruised the apples, the new ones cut them. We found, fifty years ago, that, with the advantage we then had of the old-fashioned mills, it was better to grind or crush the apples and then let the pomace remain in the trough at least 10 or 12 hours; and if the weather was cool, let it remain 24 hours."

Price of Bones.—A Kansas correspondent asks the price of bones in New York market, and whether the difference in the age of the bones makes any difference in their value. LISTER Brothers, bone manufacturers at Newark, N. J., pay on an average about $27 per ton of 2,000 lbs. for cattle bones, dry and in good merchantable order, when delivered free on board in N. Y. city. Thus they get bones collected in Winter, in the Spring; and bones collected in Summer, in the Fall. Bones of animals which have been killed a long time and out of which the substance has been bleached by exposure are not of as much value, $25 per ton being the highest price paid in New York when delivered free on board cars.

Long Furrows Economical.—A German agricultural journal prints a plea for long furrows. The turning of the plow and the commencing of a new furrow require more exertion in the plowman and the team than continued work on a straight line; and how great may really be the loss of time, from frequent interruptions in short turns, may be shown by the following calculations:—In a field 225 feet long, five and a-half hours out of ten are used in re-directing the plow; with a length of 575 feet, four hours are sufficient for the purpose; and when the plow can proceed without interruption for 800 feet, only one and a-half hours of the daily working time are consumed.

Scientific and Useful.

SCIENTIFIC AND USEFUL NOTES.

To Cut and Bore India Rubber Stoppers.—W. DONKIN writes the Chemical News:—Dip the knife, or cork borer, in solution of caustic potash or soda. The strength is of very little consequence, but it should not be weaker than the ordinary reagent solution. Alcohol is generally recommended, and it works well until it evaporates, which is generally long before the cork is cut or bored through, and more has to be applied; water acts just as well as alcohol, and lasts longer. When, however, a tolerably sharp knife is moistened with soda lye, it goes through India rubber quite as easily as through common cork; and the same may be said of a cork borer, of whatever size. I have frequently bored inch holes in large caoutchouc stoppers, perfectly smooth and cylindrical, by this method. In order to finish the hole without the usual contraction of its diameter, the stopper should be held firmly against a flat surface of common cork till the borer passes into the latter.

Best Time to Paint Houses.—The Technologist says:—The best time for painting the exterior of buildings is late in Autumn or during the Winter. Paint then applied will endure twice as long as when applied in early summer or in hot weather. In the former it dries slowly and becomes hard, like a glazed surface, not easily affected afterwards by the weather, or worn off by the beating of storms. But in very hot weather the oil in the paint sinks into the wood at once, as into a sponge, leaving the lead nearly dry and nearly ready to crumble off. This last difficulty, however, might in a measure be guarded against, though at an increased expense, by first going over the surface with raw oil. By painting in cold weather, one annoyance might certainly be escaped, namely, the collection of small flies on the fresh paint.

The Herdsman.

NOTES FOR HERDSMEN.

Hoof Ail.—A writer says:—Frequently this arises from the bad condition of the stables, but in many cases the cause is not so apparent. Acrid accumulations in the yard or mud in the field may have something to do with it, or it may even be caused by an animal or vegetable parasite. Whatever the cause, however, the treatment will be much the same, and should consist of cleanliness, with local applications of astringents. If the hoof is diseased and partly separated by inflammation, all the unhealthful parts should be carefully pared off, and the foot well cleaned. Then apply once or twice a day a solution composed of one dram of carbolic acid in 8 ounces of water.

Feed for Milch Cows.—A correspondent of the Country Gentleman says:—The most profitable feed for cows giving milk during Winter, and that used in nearly all the best dairies for producing milk for New York market, is a good quality of wheat bran and corn meal, mixed as follows: Eight pounds of bran and two of corn meal for each cow daily. If the above can be thoroughly cooked with cut hay, it increases its value about one fifth by actual experiment. I produced from 50 cows 500 quarts of milk daily on ten pounds of feed mixed as above and thoroughly cooked.

Hygienic Information.

TEA ,COFFEE, COCOA, AND ALCOHOL.

We extract from the British Medical Journal the conclusions of a French physician, Dr ANGEL MARVAUD, who has been experimenting on the physiological and therapeutical effects of coffee, tea, cocoa, mate or guarana (Paraguay tea), and alcohol, which he classes together as aliments of economy or anti-waste foods. He considers their influence on nutrition from two points of view: as stimulants to the nervous system, as anti-waste foods or anti-assimilators. Alcohol acts directly on the sensory apparatus of the spinal cord, and indirectly on the motor apparatus. Cocoa acts directly on the motor apparatus, which it excites in the same manner as strychnine. Coffee, tea, and mate act principally on the brain. Alcohol and cocoa excite the exercise of the muscles; coffee, tea, and mate, the exercise of thought. Further, by lessening the waste of the tissues, counteracting organic oxidation, and diminishing loss by means of the secretions, they all act as aliments of economy. In this way is explained their action in stimulating to work in the evening, in partly supplying the want of solid food, and in moderating vital combustion. Hence arises their increasing consumption, and their more general use as articles of daily regimen, hence, too, their utility in alimentation, and their important place in hygiene. The abuse of these aliments has, it is true, two principal inconveniences. In the first place, the excitement of the nervous system which they cause is liable to be followed by fatigue, weakness, and even inertia. In the second place, by their interference with and reduction of the processes—indispensably necessary to life—of combination, transmutation, and decomposition, they may cause arrest, suspension, or even complete suppression of the nutritive changes in the cellular elements, and may produce as results, torpor, atony, fatty degeneration, and necrobiosis of the tissues. Thus are explained alcoholism, coffeeism, theinism, and cocoaism.

HYGIENIC NOTES AND QUERIES.

Chronic Diarrhea.—In looking over the RURAL NEW-YORKER of Oct. 19, I find a note from E. FITZ SIMONS, asking for a recipe that will cure chronic diarrhea. If he has not contracted the bad habit of using tobacco habitually, I think the following will cure him:—Immediately after having taken a meal, take a pipe and tobacco and smoke until he feels the effect in his head; then lie down for a season of rest, until the effect passes off. He may then go about his daily avocation until the next meal, when the same course is to be followed, and also on retiring at night. This treatment cured me after having suffered with said complaint for more than nine months, and being treated by different physicians in Australia, England, United States and Canada. —W. G. N., *Mt. Vernon, Ont.*

I SYMPATHIZE with, and gladly respond to the request of one of your subscribers for a recipe for chronic diarrhea, which has proved infallible with us for years past. I only wish all who may be benefited by it will acknowledge it in your paper:—One ounce of tincture of opium; one oz. tincture of camphor; one oz. tincture of rhubarb—all put in one bottle by a reliable druggist, Dose 20 to 30 drops, given every half hour or hour, as the case may require; taken in a tablespoonful of weak brandy, and a swallow of weak brandy and water taken after; as the patient grows better lengthen the time between the doses. In severe cases it may be taken in half teaspoonful doses.—MRS. F. CRAWFORD.

To Remove the Odor of Perspiration.—The unpleasant odor produced by perspiration is frequently the source of vexation to persons who are subject to it. Nothing is simpler than to remove this odor much more effectually than by the application of such costly unguents and perfumes as are in use. It is only necessary to procure some compound spirits of ammonia and place about two tablespoonfuls in a basin of water. Washing the face, hands, and arms with this leaves the skin as clean and sweet as one could wish. The wash is perfectly harmless, and very cheap. It is recommended on the authority of an experienced physician.

Cure for Frosted Feet.—Warm some pine tar and apply with a feather to the affected part; heat it in by the fire before going to bed. In very bad cases it may need the second or third application. It is a sure cure, and the tar can easily be removed with lard and soap.

Dyspepsia Remedy.—I desire to thank Mr. F. W. R., Lowell, O., for his cure for dyspepsia, published in RURAL NEW-YORKER, July 20, 1872. It cured me in six weeks.—J. J. B., *Cleveland, O.*

Industrial Topics.

"FARMERS' PURCHASING AGENTS."

I NOTICE a paragraph in the RURAL NEW-YORKER of Nov. 9th, headed "Farmers' Purchasing Agents," which gives, as I think, a one-sided view of the case; and while it may be commended for the purchase of the larger farming implements, which articles are more generally used by the well-to-do class, I would not differ with you; but when you include groceries, dry goods, etc., you concern many who are left out of the ring. I would like to ask whether these close-buying farmers are going to share the good bargains with their poorer neighbors who have not the ready cash to buy at wholesale? or whether they are to be referred to the extortionist or retail merchant? If your system were generally practiced, what encouragement would an honorable man have to set up a business as a retailer? The support which ought to be given him by the wealthy farmers is withheld, leaving the poorer classes for the merchant to depend on for a business. The latter may be just as honorable as the former; but many work for the farmer and take a good share of their wages in rent, firewood and produce; and the merchant often has to give them long credit on their dry goods and groceries, and many times they are unable to pay at all, which makes it up-hill work for the merchant.

Some of the farmers go on the plan that they are perfectly good; and of course the merchant is glad to sell to safe men; at the same time, their long-deferred payments tax him seriously, and through fear of giving offense and losing their patronage, submits to the loss.

Now, I ask, is not this mode of doing business a direct incentive to dishonesty! Is not the merchant tempted to add to the account of such customers an extra quarter of tea or seven pounds of sugar to make up loss of interest? He starts in business meaning to be honorable, but he finds himself beaten by shrewdness, which he feels compelled to match or shut up shop. I hardly think extortion would find place in a community where a merchant is generously sustained by all, rich or poor, as such a business would enable him to sell so close to wholesale figures that clubs and organizations would get no advantage in their plan. While I am speaking of country places generally, I do not include many whole-souled, prompt-paying farmers with whom it is a pleasure to do business, but those who are not willing to live and let live, and who, by their penurious practices, would unite the producer, manufacturer and retailer all in the same individual when, perhaps, they would be no better off. M.

OUR correspondent has made his statement none too strong. That wealthy farmers who do buy at wholesale should share their bargains with those dependent upon them, is only just; but that they will do so is by no means certain. We did not, in the paragraph alluded to, intend to class all men as extortionists who sell implements or goods; but we did mean what we said, that this mode of making purchases deals a direct blow at monopolies and extortion wherever they are found.

One of the curses which oppress farmers and poor men, and make dishonest men of merchants, is the credit system. No farmer should or need have an account with any merchant. No day laborer, or one who works by the month or the year, can afford to have. And if we were a merchant, no farmer, no matter how wealthy, nor any other person, should have even a day's credit. We would establish the cash system by selling so much lower for cash that we would get custom even though we might offend some snobbish people who think a great deal more of getting goods than of paying for them, and who often live off a merchant on their reputation for ability to pay, and finally turn out bankrupt. If the merchant has no bad debts, he can afford to sell cheaper; and he can have none if he trusts none. One advantage to the farmer that will result from purchasing through agents, is that he must pay cash.

FASHIONS FOR WINTER.

1170—GODIVA. The Paletot is one of our latest Paris novelties. It contains many new and desirable features. Without looping, it can be worn as a long, tight-fitting basque, or looped (as shown in cut), it is a most elegant Polonaise. The ornamental back piece gives it a novel appearance. The back piece is separate and can be worn or not, as may please, thus constituting, at will, a different garment. The Paletot is tasteful and complete, and can be taken or worn in a variety of styles, and is well adapted to any material with a basque dress. Braiding is the trimming used. Price of pattern, with cloth model, ONE DOLLAR. See GRAND PREMIUM below.

1133—DOLMA CLOAK. No drapery is of more elegant description to win universal favor. For comfort, neatness, and elegance combined, it is equal to any not to be found among the novelties of this winter's productions. Takes two and a half yards double-fold Cloaking cloth. Pattern, with cloth model, 50 cents.

847—LA PIERRE OVERSKIRT. The most attractive and elegant style for making, in all kinds of material. And though for a season Polonaises have reigned, yet a spirit of change is quite evident, and we gladly accept this beautiful novelty which will gratify the wishes of thousands who desired to see overskirts again in high favor. Takes three yards thirty-inch goods. Pattern, with cloth model, 50 cents.

The above engravings are taken from the **BEST** Fashion Magazine **IN THE WORLD!** It is the New York City Ladies' **AUTHORITY** in all matters of **STYLE** and Dressmaking, and the **ONLY** publication in this country that **IMPORTS** Fashions and **SELLS** paper patterns of them. It gives full information upon every point in Style, besides minute instructions in making all kinds of garments.

This number contains a large fashion plate 11 by 22 inches, **STORIES, HINTS,** Criticisms, Foreign News, &c.

Smith's Illustrated Pattern Bazaar,
Only ONE DOLLAR A YEAR!!!

GRAND PREMIUM. By sending **ONE DOLLAR** and **TWO STAMPS** with your name and address to **A. BURDETTE SMITH, 914 Broadway, N. Y.** you will be made a *yearly subscriber* to **SMITH'S ILLUSTRATED PATTERN BAZAAR, AND** the patterns with **CLOTH MODELS,** complete, of the **THREE** above engravings will be mailed to you, **FREE, AS PREMIUM.**

Either of the above patterns sent by mail on receipt of its marked price.

A CATALOGUE
of Winter Styles, selected from the Bazaar. Worth more than any Fashion Magazine to show what is *now* worn. Mailed to any Address on receipt of **Two Stamps.**

We give a CLOTH MODEL with each pattern, which SHOWS every seam, pleat, gather, loop, etc., how to put the garment together by the pattern, and how it will look when completed. By the use of our Cloth Models any person who can sew can FINISH the most difficult garment as easily as the plainest. They are PERFECT GUIDES.

Address, very plainly,
A. BURDETTE SMITH,
Smith's Illustrated Pattern Bazaar,
914 Broadway, New York.

TO OWNERS OF HORSES AND CATTLE.

The only Cattle Condiment ever awarded a Gold Prize Medal.
"THE NUTRITIOUS CONDIMENT" for Horses and Cattle, has been used for ten years with great success by the largest contractors and owners of horses and cattle in the principal cities of Europe, as the **Best and Cheapest Cattle Food in the World.**

HOW OUR LAWS ARE MADE.

WE wish every voter in New York State—indeed, in the country, for there is comparatively little difference in the modes of legislation in the different States—could have listened to the expose of the manner in which laws are made in the New York Legislature, by Hon. L. BRADFORD PRINCE, Chairman of the Judiciary Committee, before the New York Liberal Club. We have a far higher appreciation of the character and honesty of our Legislators than we had before. We do not believe, nor did Mr. PRINCE pretend, that there are no dishonest Legislators—that men do not go to the Legislature for the purpose of procuring the enactment of special laws with a view to personal aggrandizement; but we do believe, after Mr. PRINCE'S showing, that there would be fewer of this class of men seeking position as Legislators if the vicious system which permits them to carry out their schemes, did not attract them there. Few such men would spend 100 days at Albany for the paltry $3 per diem and the honor which accrues, alone. It is the knowledge of their power to prey upon the people, to foster their own personal objects or those of their friends, regardless of equity, justice and the rights and wishes of the people, that induces them to seek, and spend money to secure, places in the Assembly or Senate of the State. Some of the statements made by Mr. PRINCE we summarize as follows:

1. The rules require three readings of all bills. This, in practice, is a farce.

2. The rules require that each bill shall be considered section by section, in Committee of the Whole. Early in the session this rule is usually observed; but when the rush of business becomes great this is evaded by a little finesse, and the floodgates being opened, all sorts of bills pass without any consideration whatever.

3. A substitute for the Committee of the Whole is created called the "Sub-Committe of the Whole," or "Grinding Committe," consisting of 17 members. To this committee are supposed to be referred only those bills of a general character to which there are no objections. This is done to facilitate business. Finally, as business presses, discretion is given the Speaker and Clerk of the Assembly to send to this "Grinding Committee," without formal reference, such bills as, in their judgment, come within the rules of such reference. The Speaker and Clerk, with 700 to 1,000 bills on file, select without regard to law, and send thither bills which ought not to be so referred, and which, therefore, do not come within the scrutiny of the Committee of the Whole; and even the Sub-Committee do not have time even to hear them read, and they are reported complete without any one, except the respective introducers of the bills, knowing their contents. Here is the opportunity for vicious legislation which unscrupulous Legislators take advantage of.

4. By means of this mode of legislation, early in the session, bills are introduced, printed, read by members, who see no objection to their passage, and towards the close are, on motion of the introducers, referred to the Sub-Committee; but before getting into the Sub-Committee's hands, are "amended" or transformed into other bills, are reported by the Committee and passed by the Assembly, under the old title, members supposing they are voting for a bill they know nothing of, and would not vote for if they did.

5. The cause of all this legislative farce and iniquity is the shortness of the session and the volume of business which is forced upon the legislative body.

6. This volume of business is so great that if the introduction, consideration and passage of each bill, observing the rules of the Assembly, took but thirty-nine minutes, it would require, at that rate of speed, a session two or three times as long as that fixed by law to pass 1,000 bills—and 1,200 to 1,500 have usually to be considered.

7. In 1871, of 700 bills passed by the Assembly, not 200 received the votes of the majority of the members. Swiftness in calling the roll was a requisite accomplishment by the Clerk in those days; and the names of 128 members were called in sixty-five seconds, no response being expected; all who were present being recorded as voting affirmatively; and many who were 100 miles away finding, on their return, that they were recorded as voting for every bill passed during their absence.

8. One source of all this evil is the vast volume of special legislation thrust upon the Legislature. A constitutional amendment is necessary, which shall provide general laws under which corporations may be organized, and granting more power to local legislatures, such as boards of supervisors, municipal authorities, &c. Now the legislator from any district has autocratic control of all the business of that district which comes before the Legislature. If his recommendations are scrutinized and his bills rejected, he says to those who voted against his propositions, "What right have you to interfere in matters in my district? I will, if that is the game, look after and meddle with your matters;" so all local and special legislation depends for its character upon the honesty or interest of the member representing any district affected by it; for he has but to introduce it, urge its passage, and all other members vote for it because each has his especial local ax to grind also, and reciprocity, in these matters is expected, nay, required.

9. Abolish all special legislation. Enlarge the powers of local legislatures (Boards of Supervisors) to consider and act upon purely local questions; compel all bills to be printed, and permit the passage of no amended bill until the amendments have been printed; make it a constitutional provision that all bills shall be considered in Committee of the Whole, section by section; limit the time when bills may be introduced to March 1, thus securing a full month for the consideration of those already before the Legislature, and Mr. PRINCE thinks there will be fewer inducements for dishonest men to go to the Legislature, and we will have fewer but better-considered and wiser laws. We think so too; and we commend this whole subject to the attention of the people of the State, believing it a matter in which they are most vitally interested.

RURAL NOTES AND QUERIES

Wool Burned in Boston.—According to United States Government statistics, the N. Y. Herald says, the wool clips of the country, the past three years, were as follows:—1870, 100,936,825 lbs.; 1871, 85,609,007 lbs.; 1872, 109,840,358 lbs. Of this quantity there had been received in Boston, Philadelphia and New York, up to date, of the clip of 1872, 43,985,200 lbs.; the corresponding period in 1871, 83,513,800 lbs.; in 1870, 74,820,221 lbs. Of these total receipts in 1872, Boston had received 17,096,200 lbs. The stock of domestic wool in Boston, Jan. 1, 1872, was 4,400,000 lbs., making a total of 21,496,000 lbs. available for sale during the year. During the past ten months sales have been reported there of from two millions to four millions of pounds each month; and during the last five months they have averaged two and a half millions of pounds per month. Hence, the Herald concludes that the wool burned in Boston does not exceed 2,000,000 of pounds, equal to about 800,000 lbs. of clean wool. The total imports of foreign wool thus far this year are 95,248,024 lbs., against 74,502,477 lbs. last year, and 48,660,579 lbs. the year previous.

Centennial Speculations.—We have very little faith in the appeals to patriotism which are made to the American people in behalf of this or that celebration or exposition—appeals simply to their national pride. The Philadelphia Centennial Exposition, which is to be international, will doubtless gather together a vast exhibition of the natural and manufactured resources of this and other countries. That it has any claims upon our citizens on the score of patriotism we do not believe. We see no reason why any one should attend it from mere patriotic impulses; nor why any one should contribute to it for the same reason. That kind of clap-trap we have no sympathy with. The object is speculation and profit—not to exhibit and stimulate patriotism, except so far as national pride and self interest may be appealed to to swell the profits of the management and glorify Philadelphia. One plea in behalf of the exposition is that it may pay the visitor, both in the pleasure he may derive and the knowledge he may acquire to attend it; and it may pay the exhibitor as an advertisement. That it is likely to benefit the community, except through individuals, we do not believe. That it is essential in order to establish and illustrate the patriotic impulses of the people and their pride and faith in their own land is all nonsense, in the light of the events of the past ten years. That it will aid in developing the resources of the country may be true—to the extent that it attracts the notice of the capitalists of other countries; but that it is essential to our development we are not convinced.

Protection to American Exhibitors at the Vienna Exposition.—Austria, as our readers are aware, is getting up a great Exposition, to which she invites contributions from America. But American inventors, who may take their wares thither, are not yet safe from the piracy of their inventions. No adequate protection is afforded them. Their trademarks are protected by treaty; and the Austrian Parliament has passed a law providing that every exhibitor may, before placing his articles on exhibition, take out a certificate without charge, which certificate shall act as a patent during the exhibition and for two months afterward, and may then be made an absolute patent by the payment of less than $11. But the Patentee must establish the manufacture of the patented article in Austria within one year from the date of the patent, or it becomes void. A treaty looking to the removal of these objections is being considered, and it is hoped may be secured. Meantime, there is no safety for American inventions in Austria.

O for Such a Minister of Agriculture!—We mean one invested with the powers which seem to inhere in the office of the French Minister of Agriculture, and with a will to be old fogyish enough to use these powers to regulate rascals into honest practices. He (the Frenchman) is after all adulterators of food and beverages, cosmetics, medicines, pills, powders, etc.,—having given orders for their analysis with a view to bringing offenders to justice. What a blessed thing it would be if the housewife could know that when she buys and pays for a pound of coffee, it is not peas or chicory; or of tea, that it is not raspberry leaves; or a pot of horse-radish, that it is not two-thirds grated turnips; or a barrel of white sugar, that is not mostly white earth; or a quart of milk, that it is not half chalk and water, etc., etc. Will we ever reach the French state of civilization?

The Public Hiring Fairs of England are denounced by the better classes there, especially by social reformers, as productive of the moral contamination of both sexes. Young English men and women meet, in a market place, those who desire to employ them. There is higgling for prices. The shrewd employer invites the sturdy yeoman or buxom maid to a pot of ale. The bargain is finished over the third pot. There is a good bargain made by the employer, and the employee finds himself or herself literally "sold." It smacks too much of the slave market. It breeds vice, and an effort is being made to adopt a system of registry or of intelligence offices for each sex separately, with a view to correcting the evils of the present system.

Agricultural Implements in 1870.—The Census Report shows the value of Agricultural Implements made in this country in 1870 to have been $52,000,000—three times the value of those made in 1860; but it should be remembered that this difference is due, to some extent, to an increase in the nominal value of material made after ten years' experience and progress; for the demand for machinery, growing out of scarcity of labor and adaptation of farms to its use, has greatly increased during the past twelve years.

The Deficiency of the Wheat Crop of Great Britain, according to one English authority, is 22,079,200 bushels, not taking into account the inferior quality of a large portion of that saved. Another authority places the crop twenty per cent. below the average in England proper, and not half an average in Scotland. Add to this the deficiency in the potato crop, and the widespread disease among live stock, and the Winter prospect is not a hopeful one for the poor of the British Isles.

Vick's Floral Guide, (JAMES VICK, Rochester, N. Y.), is now published quarterly. The first number for 1873 is a most attractive one—brilliant in its interior and exterior illustrations, and filled with practical information. This, together with the beautiful chromo we received from him not long since, places JAMES VICK first in the field among the seedsmen of 1873. This Guide is sold at 25 cents a year. The number before us is worth $1.

Better than Described.—J. H. H. LOVETT, Clinton Co., Ind., to whom we recently sent our Premium Engraving, writes:—"Am in receipt of a Splendid Picture from you. Thanks for the same. *Think it far surpasses your description.*"

THE SEASON, CROPS, PRICES, ETC.

Ransom, Luzerne Co., Pa., Nov. 18.—The weather during the Fall thus far has been quite wet—so much so that some farmers have not yet got their buckwheat crop gathered. Most of the buckwheat crop has been threshed when very damp and the yield of flour will be light. The corn crop is good. Potatoes average about 100 bushels per acre; quality not as good as the average; price, 80c. per bushel. Wheat and rye sown this Fall looks well. Hay was rather light in most places; quality good generally; price, $22@25 per ton. The Fall has been favorable for grazing, and very few persons have fed their stock any dry fodder up to this time. For the past three days the weather has been cold and raw. The horse epidemic has made its appearance among us, and one-half of the horses are now more or less afflicted. Mules and oxen are in demand. Cows are worth $25 per head on an average, if public sales determine their value. Coal retails at the mines for $3 per 2,000 lbs. Coal lands are fast passing into the hands of the large coal companies.—**

RURAL BREVITIES.

COMMODORE VANDERBILT'S trotting horse, Mountain Boy, is dead.

MAINE'S wheat crop for 1872 is reported the best in twenty-five years.

CHAS. E. TOUSEY is informed that ALBERT BRESEE'S address is Hortonville, Vt.

WE acknowledge the receipt of catalogue of the Michigan State Agricultural College.

BRANDON, Vt., has a general market day every Saturday. Those held have been very successful.

I. N. WEST, Yates City, Ill., recently lost 180 hogs from cholera, 68 of which were fat, ready for market.

JOHN WIER, Lacon, Ill., born in 1797, in the District of Maine, a pioneer horticulturist in Illinois, died Oct. 31st.

OUR YOUNG FOLKS, advertised in this paper, is a favorite with both the risen and rising generation, and worthy of a cordial reception in every family.

WE have from Col. HARRIS a report of proceedings of Swine Breeders' Convention at Indianapolis; received too late to print this week; will appear in next issue.

ALL manuscript designed for the RURAL NEW-YORKER should be addressed to this office, 5 Beekman St., N. Y. Col. HARRIS disclaims being LEAD PENCIL, Esq.

OVER $60,000 will be paid out in Berlin, Wis., and vicinity for cranberry picking this season. On two principal marshes there have been employed an average of 2,700 pickers daily.

PUBLISHER'S NOTICES.

TO EVERY READER!

HINTS, REQUESTS, SUGGESTIONS, ETC.

Premium Picture Now Ready!—Agents and Subscribers will please note that our Premium Engraving is *Now Ready*, and that copies are promptly mailed, post-paid, to all entitled. We are now filling all orders on day of reception, and think we shall be enabled to do this through the season, so that no one will have to wait weary days or weeks for the Beautiful Premium Picture.

Clubs Coming!—Our first Club for 1873 came just a month earlier in the season than the first for 1872, and eight of its ten members paid $2.50 each in order to secure the Premium Engraving. Others are coming, and the Campaign is fairly opened. "Push on the column," good recruiting friends of the RURAL BRIGADE! Now is the Time to Work and Win!

Send for the Documents!—Our new Show-Bill, Supplement, Prospectus, &c., are *now ready* and will be sent *free and post-paid* to all applicants disposed to form clubs. Send for and use the documents!

"Progress and Improvement."—MOORE'S RURAL for 1873 will be better than ever before, in both CONTENTS AND STYLE. It will appear in a NEW DRESS of Clear and Beautiful Copper-Faced Type, and present other **Decided Improvements.** Agents and subscribers will please note this, and if they tell their friends, so much the better.

The Premium Picture is sent to All who pay $2.50 for a copy of the RURAL one year, and *not to those who only pay the club rate.* Club subscribers can secure the Engraving, however, by adding 50 cts. to the usual club price ($2.) Don't forget this.

Begin Clubs Now!—And to all who want the paper from date, or either one year (at $2.50) or 15 months (at $3) from Oct. 1, we will send the paper accordingly, with Premium Engraving post-paid. The whole club can start at one time, or part Jan. 1st and part earlier. Note this fact.

BUSINESS NOTICES.

HORSE EPIDEMIC.

A PHYSICIAN in a communication to a Buffalo paper about the Horse Epidemic, says:—"Externally I used and would recommend Dr. Trusk's Magnetic Ointment to the throat, around the ears and on the forehead. This ointment contains tobacco and lobella, and operates upon the mucous glands of the head and throat by causing an increased flow of secretion from them, at the same time by its relaxing effect removing the stricture and giving almost instant relief to the cough and breathing." It is kept by all Druggists.

Modes and Manners.

FASHIONS IN FURS.

Of expensive furs the preference is for Crown Sable, a cold, brown fur, long, thick, and soft as silk. These furs, coming from the cold and almost inaccessible regions of the North, are, of course, correspondingly high in price. A muff, of medium size, and boa ten yards long, made of four skins, with tips, costs $1,150. Such a set is very beautiful, and ought to last a life time and remain superior to the changes of fash- Only under these circumstances ought they to be bought. Other grades of this fur are cheaper. The lowest limit, however, being $200.

Hudson Bay Sable, a rich brown and very desirable fur, ranges from $100 to $350. In beauty it is preferable to the Crown Sable, and is almost as agreeable to the touch.

Mink, however, is the standard fur, and, whatever fashion may decree, mink retains its place in the market. The most desirable variety is the Eastern fur, which is very dark and very close and fine. We would advise every one in buying mink to pay more and obtain this kind. In the end it is cheaper. Moreover, observe the gray hairs. If there are none the fur is probably dyed, and will, in time, change color. Mink sets are brought within the limits of $40 and $125 per set, comprising a boa and muff. Capes are no longer worn; they are ugly, clumsy and useless in themselves, and spoil the effect of a handsome cloak. Even a boa adds no beauty and is worn by many ladies only when needing extra protection about the throat. Muffs are finished with brown gros-grain bows in of tassels.

Of lower grades of fur, Black Martin is now most fashionable. Most of you will remember the immense muffs of our grandmothers, of long, silky black hair. It is the same fur in our modern styles. It is very pretty, the black so lustrous that it reflects the light. The fur, however, is dyed, and consequently not durable; but price, $20 to $30, renders it not extravagant to purchase. Alaska Sable, which is coarser, but natural in color, ranges from $18 to $30, and Lynx from $25 to $30.

Seal skin is, if possible, more popular than last season, and even more expensive. A set of Seal skin comprises cap, muff, boa and sack, or talma, for they are made in various shapes. A complete set of the first quality costs $600. These, however, are trimmed with one or two rows of Deep Sea Otter, which is very expensive. Very nice sets, untrimmed, may be had for $125 to $200. Muffs cost from $11 to $20, and caps from $8 to $25. In buying seal caution should be used. The real color of the seal is a light yellow. Fashion has refused to acknowledge it so all the furs are dyed. It is said that there is but one house in the world where this is done properly, and that house is in London. We are sorry to say that the American dyed Seals are almost worthless; the color soon changes and the fur roughens. In buying Seal skin, then, remember this fact.

There are other and cheaper kinds of fur that can be bought at from $6 to $10. It is not economy, however, to buy these if it is possible to get better. Astrakan, once so popular, is not at all worn now. The finer varieties, such as Persian and Russian lamb, are quite as expensive as formerly, but are no longer bought; even as a trimming it is not used.

Among fancy furs Silver Fox is in demand and is very expensive. The fur is procured among the highest fastnesses of the Rocky Mountains, and is very beautiful. It is chiefly used for trimming, and sells for from $5 to $15 a yard. The darker parts, however, are made into boas and muffs and are equally expensive.

Deep Sea Otter is another expensive fur used also for trimming. A muff of this fur costs as much as a Crown Sable.

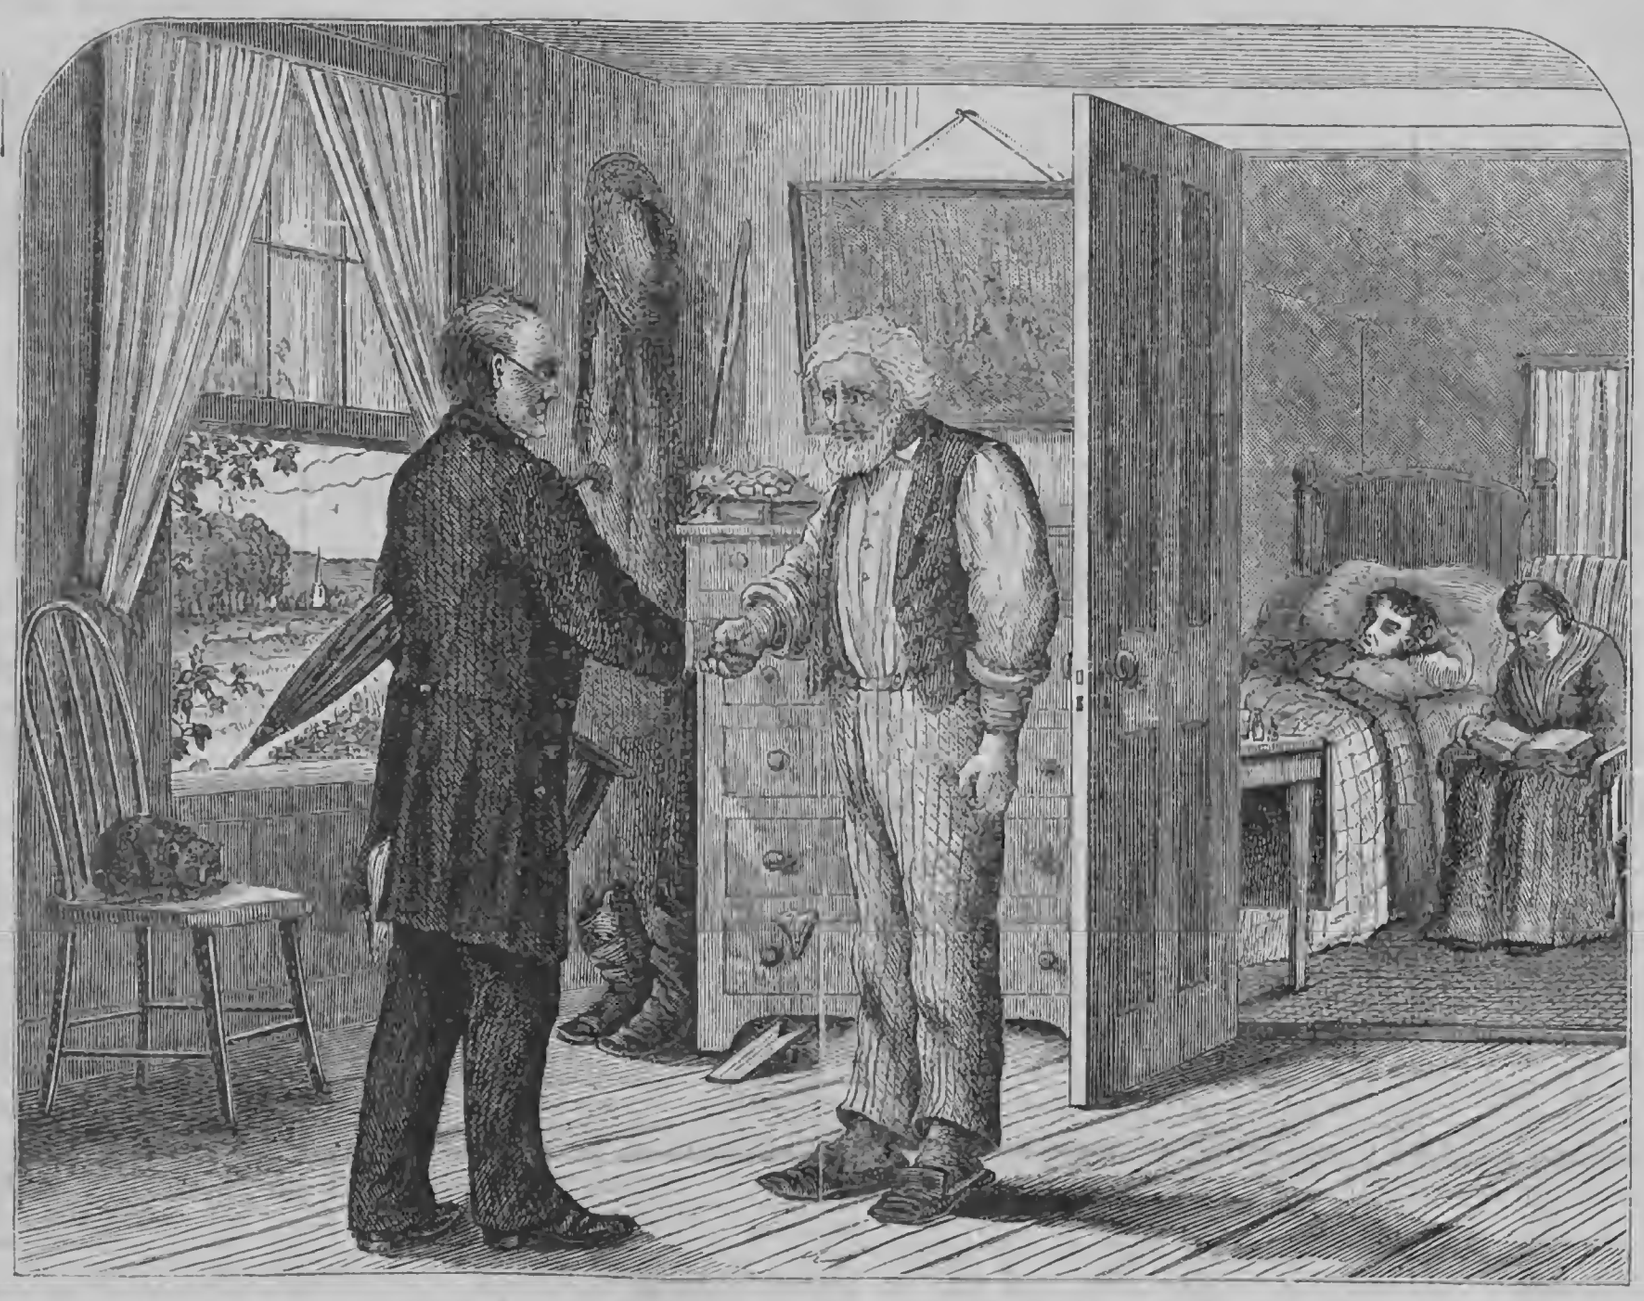
Ermine is cheaper this season. Sets can be bought for from $20 to $40. It is only used for full dress and evening entertainments. It is out of place in church.

White Fox has largely superseded ermine. The boas are very large and showy, but we do not deem them so lady-like. White Fox makes a handsome trimming. It costs $1.50 per yard.

Grebe is a very pretty fur, but very delicate, and often requires cleaning. A set costs $20 and should be accompanied by a Grebe feather on the hat.

Chinchilla is used for mourning and for elderly ladies, although fashion is not rigorous in this respect. The price is from $25 to $50.

Children's furs are very reasonable. The prettiest fur for young children is Genet, the white fur of the French Cat. A set is composed of cap, sack and muff. These cost from $10 to $20. The sack is usually confined with a gay sash. Ermine is also used and an imitation is very common, though we would advise the Genet in preference.



"WHY, PARSON, DON'T YE KNOW ME?"

Gentlemen's furs are in Beaver, Otter and Seal. Collars range from $3.50 to $5. Caps of Seal are very fashionable, and generally becoming. Sealskin gloves are now largely worn. They cost about $5, and are worth any amount in comfort.

Furs are used a great deal in trimming dresses and polonaises, especially the Silver and White Fox, Black Martin and Seal are also popular. We do not fancy these, however. The only merit is their suitability as a winter trimming. They are not pretty, and their effect is clumsy.

Thanks for information are due C. G. GUNTHER & Co., No. 19 Union Square.

CRAVAT BOWS.

Most exquisite cravat bows and long jabots with neck-bands are formed of colored China crape and lace, or of the soft repped silk called gros d'Orleans. One of pale rose-color has a neck-band formed of three tiny folds, while the long square jabot is a knot of crape with ends frilled with rare old Mechlin lace; $10 is the price of this dainty bit. Another is the Pompadour, with a fold of blue and of rose around the neck, with two standing frills of pointed Valenciennes, while in front are scallops of blue, lined with rose-color and edged with lace. Black bows are of watered ribbon loops with black lace. Another stylish tie is of black faille, with the jabot ends edged with white lace. White neck-ties of twilled silk or of China crape are handsomest with costumes of dusky olive, garnet, plum-color, and invisible green. For the dowagers are narrow ties of black camel's hair; the ends are finished with a narrow India border in gay colors. These are not scarfs to be worn outside of street garments for warmth, but merely neck-ties to be passed around a collar of linen, and worn with black or other dark dresses. Prices $15. Pleated linen frills for the neck and linen under-sleeves laid in pleats are the fashionable French *lingerie*. The standing English collar of linen is worn so wide that it is seen high above the cravat all around the neck. The fronts meet quite together, and the points are slightly broken over. The plainest linen collars are now completed by a neckerchief or habit shirt of muslin large enough to cover the shoulders and protect them and the corsets from being soiled by contact with the colored lining of the dress.—*Harpers' Bazar.*

THE French heel is reported as having gone completely out of fashion.

THE REAPING MACHINE.

BY WYLIAMME FAWCETTE.

WHY, parson, don't ye know me? What say 'bout my hair?
All white! Turned sudden! Sure enough! Wal, 'twan't no care, nor scare,
Done that. No wonder 'tis so, though; it's wonderful I'm 'live.
Hain't heern the trouble? Wal, ye know, our JOHN he liked to drive
The reapin' 'chine; an' he fixed up a leather hood on top,
To keep the sun off—for some days it's fit to make ye drop.
Wal, I was a drivin' the hosses a spell, an' a little bit on ahead
He seen some boughs a hangin' down, thet mought ketch the hood, and he said
As how he'd run for'ard an' lift 'em up, so I could drive under straight.
I druv along, an' never thought nor looked till 'twas too late.
I heered him screech, an' looked round quick, an' thar he sot in the grain,
Feet cut square off, legs spoutin' blood, an' he most mad with the pain.
"Oh, JOHN! Be ye killed?" says I. "No," says he. "Jump, daddy, jest quick's ye can,
"An' bring me the hosses' hitchin' straps, an' two sticks—thar's a good ole man."
He drawed a strap round 'bout each leg, an' twisted it tight with a stick.
So the bleedin' stopped; an' then I up an' carried him home right quick,
An' run for the doctor; an' doctor says he'd a been dead to-day,
If 'twarn't for his pluck, a twistin' them straps, when his life was bleedin' away.
Yes, I'll try to bear it, parson; but his mother 'll lie and dream
How her boy's two feet was cut right off, when his daddy druv the team.
An' it's hard to feel that the son I reared, my old age's staff to be,
All through the years thet's comin' yet, will have to lean on me.

THE VRILL-YA'S CONCEPTION OF HUMAN EXISTENCE.

IN a little volume entitled "The Coming Race," (New York: FRANCIS B. FELT & CO.,) purporting to give an account of the character, habits and beliefs of a race of beings (called Vrill-Ya) found in a subterranean world, we find the following:—"Though, as I have said, the Vrill-Ya discourage all speculations on the nature of the Supreme Being, they appear to concur in a belief by which they think to solve that great problem of the existence of evil which has so perplexed the philosophy of the upper world. They hold that wherever He has once given life, with the perceptions of that life, however faint it be, as in a plant, the life is never destroyed; it passes into new and improved forms, though not in this planet, (differing therein from the ordinary doctrine of metempsychosis,) and that the living thing retains the sense of identity, so that it connects its past life with its future, and is *conscious* of its progressive improvement in the scale of joy. For they say that, without this assumption, they cannot, according to the light of human reason vouchsafed to them, discover the perfect justice which must be a constituent quality of the All-Wise and the All-Good.

"Injustice, they say, can only emanate from three causes:—Want of wisdom to perceive what is just; want of benevolence to desire; want of power to fulfill it; and that each of these three wants is incompatible in the All-Wise, the All-Good, the All-Powerful. But that, while even in this life, the wisdom, benevolence and the power of the Supreme Being are sufficiently apparent to compel our recognition, the justice necessarily resulting from those attributes absolutely requires another life, not for man only, but for every living thing of the inferior orders. That, alike in the animal and vegetable world, we see one individual rendered, by circumstances beyond its control, exceedingly wretched compared to its neighbors—one only exists as the prey of another—even a plant suffers from disease till it perishes prematurely, while the plant next to it rejoices in its vitality and lives out its happy life free from a pang. That it is an erroneous analogy from human infirmities to reply by saying that the Supreme Being only acts by general laws, thereby making his own secondary causes so potent as to mar the essential kindness of the First cause; and a still meaner and more ignoble conception of the All-Good, to dismiss with a brief contempt all consideration of justice for the myriad forms into which he has infused life, and assume that justice is only due to the single product of the An (man).

"There is no great and no small in the eyes of the Divine Law-Giver. But once grant that nothing, however humble, which feels that it lives and suffers, can perish through the series of ages; that all its sufferings here, if continuous from the moment of its birth to that of its transfers to another form of being, would be more brief compared with eternity than the cry of the new-born is compared to the whole life of a man; and once suppose that this living thing retains its sense of identity when so transformed (for without that sense it could be aware of no future being), and though, indeed, the fulfillment of Divine justice is removed from the scope of our ken, yet we have a right to assume it to be uniform and universal, and not varying and partial, as it would be if acting upon general secondary laws; because such perfect justice flows of necessity from perfectness of knowledge to conceive, perfectness of love to will and perfectness of power to complete it."

AN AUSTRIAN "GHOST."

THE public of Vienna have been much troubled by the story of an apparition which has lately occupied the newspapers of the Austrian capital. A sentry posted by night in the lobbies of the Imperial palace, observed, to his dismay, a female figure, enveloped in the long folds of a capacious cloak, emerge from the chambers of the late Archduchess Sophia. The alarmed soldier at once saved himself from intercourse with the ghost by flight, and told his story to his superior officer. Without putting faith in his narrative, the Marshal of the Court established a watch, and caused the lobbies communicating with the rooms of the late mother of the Emperor to be occupied by the Palace guards. Next night the mysterious vision was again seen by several persons, but vanished almost instantly. Another night the phantom showed itself to a second sentry, who fainted with terror. Some days later a new sentry saw the specter approach, but, more bold than his companions, maintained his *sang froid*, and aimed a blow at it with his bayonet. The spectre thereupon took to flight, but, pursued by the soldier, fell mortally wounded by a bayonet thrust in the back. The guards and attendants hastened to the spot on hearing the cries of the wounded ghost, and found a beardless youth, who was recognized as a priest. The strangest part of the business is that the Court has done its utmost to hush the matter up, and the soldier whose bayonet led to the discovery of the mystery has been relieved from his sentry duties and sent, as was said, to join a distant garrison. The Tagblatt, however, says he has been put in prison, and is now in solitary confinement. The Clerical papers deny that the ghost was a priest, but, on the other hand, it is alleged that he was one of the young chaplains attached to the palace and a tool of the Jesuits

THE SOULS' SONGS.

A SOUL was singing of freedom,—
  Of breadth, and depth, and hight,
Of infinite lengths, aspirations'
  Full scope, unlimited might;
Singing of Law's overthrowal,
  While serene Law listened and smiled,
A soul was singing of freedom,—
  And the songs that she sang were wild.

A soul was singing of glory,—
  And the melody rose in waves,
Swaying among the laurels
  That sprang from a thousand graves,
Graves of the soul's dead weaknesses
  Slain by Ambition's hand;—
A soul was singing of glory,
  And the songs that she sang were grand.

A soul was singing of beauty,—
  Of Creation's tints and lines,
Of thought's impassioned coloring,
  Of spirit's perfect designs;
Singing of inner sanctities,
  Trod only by priestly feet;—
A soul was singing of beauty
  And the songs that she sang were sweet.

A soul was singing of duty,—
  And the music was strong and bold,
But the high, clear ring of triumph
  Was not all that the strained chords told.
They told of a desolateness
  No sense of uprightness could glad;—
A soul was singing of duty,
  And the songs that she sang were sad.

A soul was singing of love,—
  And Infinity filled with the splendor
And Eternity's silences trembled
  To melodies deathless and tender;
Singing of love's great wonder,
  Its beginnings, developments, fruit;—
A soul was singing of love,
  And all other songs were mute.

[*Maud Manning.*

Our Story-Teller.

DR. SPENCER'S GREAT CRIME.

A STORY TOLD BY A PHYSICIAN.

I WAS sitting in my office, half dozing over an interminable article on defective nutrition, in the best medical review.

The fire in the grate was low, the night was stormy and the clock was on the stroke of eleven. I was just about to turn off the gas and retire, for, being a bachelor, I slept in the room connected with my office, when there was a pull at the bell.

I started up suddenly, for this was something new. Middlebury was a decorous sort of place, and people usually managed to be taken sick at seasonable hours.

Old Mrs. Jerome had been threatening to die for the past five years, and at every visit I paid her she solemnly informed me that when the decisive moment did come she desired me present. But, as nothing ailed the old lady beyond now and then an indigestion from too much high living, I had never yet been called upon to be present at her death.

Now, I thought, it must be old Mrs. Jerome is going.

I took up my night-lamp and went to the door. A strong gust of damp, sleety wind nearly extinguished the light, but shading it with my hand, I dimly discerned the form of a woman.

"Come in," said I, holding open the door, but she declined, with a gesture of impatience.

"You must come out," she said, in a sharp, decisive voice, "and be quick about it."

I put on my overcoat without demur, locked the surgery door, and stepped into the storm. As I did so the woman laid a firm hand on my arm, and, putting her face close to mine, said:

"Dr. Lockwood, can you keep a secret?"

"I think so, madam."

"Swear it."

"Is this secret of a professional character?—that is, is it anything you wish to confide in me as a medical man?"

"It is."

"Very well, then, I swear it."

"That is right."

A man respects an oath, though why he should is a mystery, since men's mouths are running over with them.

"Whither are you taking me, and for what purpose?"

"To the Clifton House, to see the mistress."

I started.

Clifton House was the old mansion recently taken by Dr. Spencer, a stranger to every one in Middlebury. Spencer was a tall, dark, rather distinguished-looking man, who had hung out his sign in the village, only a few doors above mine, but as yet he had got no practice.

He was unsocial in the extreme, avoiding his neighbors persistently, and when he did speak it was in such a curt, half-savage way, that one was not likely to attempt prolonging the conversation.

The doctor had a wife, it was said, but no one ever saw her. She was an invalid, and Miss Melrose, a friend of the family, presided over the establishment and sat at the head of the table.

Miss Melrose was yet beautiful, and won the admiration of all who visited Clifton House, by her grace of manner and fascinating conversation.

"As we walk along," said my companion, "let me explain to you just what it is necessary you should know. My mistress is very ill."

"I beg your pardon—is it Mrs. Spencer or Miss Melrose?"

She laughed bitterly.

"Miss Melrose! I would stab her to the heart sooner than own her as a mistress. My mistress is a lady—noble, royal and of gentle birth. It is an honor to serve my mistress."

"And is she ill? How long since?"

"Ever since she married him—curse him!" she muttered, in a fierce tone; "but I must not get excited. I must tell my story, or rather hers. Two years ago, through the desire of her dying father, Alice Herndon became James Spencer's wife. Before that she was a healthy, blooming girl; immediately after this marriage she began to fail. Do you see anything strange in that?"

"Not necessarily."

"Let me enlighten you further. Dr. Spencer was at one time engaged to Miss Lucille Melrose, but he broke the engagement and married my mistress instead. Miss Melrose was as poor as Job's turkey; Miss Herndon was an heiress, and Dr. Spencer was deeply in debt and hard pressed by his creditors. Do you see anything strange in that?"

"Perhaps. Go on."

"When my mistress married Spencer she was only seventeen, and had been taught to obey her father in everything. She was a gentle, affectionate child, and it would have been easy for Spencer to have won her love. But he did not care for that. It was her money he wanted. It paid his debts and bought him fast horses; it set his table with nice, costly dishes, and put it in his power to keep Miss Melrose robed like a queen. And all this time my mistress has been slowly but surely sinking; and, look you, Dr. Lockwood, I believe she is not dying of disease, but of—" she lowered her voice to a whisper as she spoke the word—"poison!"

"Impossible! This is a grave charge."

"Of poison given her by her husband, who, at her death, will have sole control of her property and be free to marry Miss Melrose. There is no time to explain to you in detail the thousand and one circumstances which have led me to the belief, for we are almost at the door. It is never the case that Miss Melrose and Spencer are out at the same time, or I should have called another physician before; but to-night they are called away by the death of Miss Melrose's sister, and will not be back until to-morrow. With the consent of my mistress, I came for you, and oh! Dr. Lockwood, I pray you save my dear mistress. I nursed her when her mother died and left her a helpless infant; all through her innocent youth she was like an own child to me; and now to see her fading hour by hour before my eyes! Good heavens! if I knew beyond doubt that he was guilty, his life should pay the forfeit."

I was already beginning to feel a deep interest in Mrs. Spencer, although I had never seen her, and, like her old nurse, I was inclined to feel a great animosity for Dr. Spencer.

Mrs. Spencer received me in her bed-chamber. It was on the second floor and was furnished with exquisite elegance.

Everything in the room bespoke the taste and delicacy of the occupant. The warm air was fragrant with the faint odor of the heliotrope; and, glancing around, I saw the purple blossoms and green leaves in an alabaster case on the ledge of the south window.

She was a woman who, when once seen, could never be forgotten. I have met in my life many beautiful women, but never one so lovely.

She was tall and straight, with a purely oval face, liquid brown eyes, and a dash of hectic in her cheeks, which is never seen in perfect health. She received me, as I know she received everybody, gracefully, and though there was a slight embarrassment in her manner when I spoke of her illness, she answered my professional inquiries without hesitation.

As to myself, I laid aside all false delicacy and questioned her plainly as to her symptoms. Mrs. Hurd, her nurse, remained in the room and added many little important items of information.

When she spoke of her husband it was with a sort of hopeless sadness, which distressed me greatly.

Not a breath of suspicion against him in her answer to my questions, and I felt sure that at present she knew nothing of what Mrs. Hurd had such serious apprehensions. I was glad that it was so, for, with her finely strung organization, it might have produced serious results. I made my examination of the patient as closely as I could, and drew my own conclusions. I could have sworn that Mrs. Spencer daily swallowed arsenic in small quantities, and the deadly drug was telling fearfully on a constitution never robust.

She said, answering my questions, that she had no physician except her husband. He had thought himself better acquainted with her case, and, therefore, better qualified to treat it. He never left medicine with her to take; he always brought it fresh from his office, and administered it promptly.

There was little enough I could do in such a case. Anxious to do everything, the very circumstances of the affair left me nearly powerless.

A charge of such a nature, of course, I could not make out against Dr. Spencer without the amplest proof. If I hinted a suspicion, every one would at once set it down to my professional prejudice, and if I could not substantiate my statement, the doctor could make me pay dearly for such a slander uttered against him.

The only dependence seemed to be in Mrs. Hurd. To her I unbound myself freely. I told her, without reserve, that I believed Dr. Spencer was killing his wife by slow poison, and besought her to be constantly on the watch to save the victim, and to discover some proof by which we could fasten the guilt upon him.

She smiled grimly, and promised obedience. I gave her a powerful antidote for the poison I suspected, and went home perturbed and anxious in mind. I did not sleep that night, and all the next day I was in a high fever of excitement. A ring at the bell made me tremble—a step on the gravel outside my office stopped my breath, and I hardly knew what I expected to hear, yet, I felt sure that before I slept I should hear something.

And now I must tell the story as it was told to me:

Dr. Spencer returned home in the morning after my visit to Clifton House. He looked wretchedly, the nurse said; appeared gloomy and depressed. Miss Melrose came with him, and was decorously sad over the death of her sister. Women of her stamp always do mourn to perfection. They neither overdo nor underdo the thing, as women of feeling are likely to do.

Dr. Spencer came at once to his wife's chamber. He thought she looked ill, and prescribed a cordial at once, saying he would go and fetch it.

"You are always ordering cordials for her," said Mrs. Hurd, musingly. "Why not take something yourself? You look like a ghost."

He eyed her keenly, but replied, composedly: "I think I will take some of the cordial myself, for I do not feel quite well. Alicia, dear, shall I bring it here and drink your health?"

Mrs. Spencer smiled sadly in assent—she never disputed her husband—and he went out. Presently he returned with two glasses. Both contained liquid, colorless and odorless. Mrs. Hurd was watching him with her heart in her throat, for, as she told me, she felt that the decisive moment had come. There was something in the gray pallor in the doctor's rigid face that told her of a desperate purpose in the man's soul.

He lifted the glass on the right of the tray and gave it to his wife.

"Drink it dear," he said, "it is a panacea for all evils. I also am going to take a glass of it!" and he pointed to a glass still on the tray.

Mrs. Spencer accepted it, and was putting it to her lips, when Mrs. Hurd interrupted.

"If you will bring her a tumbler of water, doctor; Mrs. Spencer complains that the cordial leaves a bad taste in her mouth, and my old bones are so full of rheumatism that it nearly kills me to go down stairs."

The doctor turned and bent on her a look as if he would read her through. But she kept her face passive. If he had any suspicions, her manner quieted them, and, putting down the glass, he left the room. Then Mrs. Hurd changed the position of the glasses.

When he came back—and he was gone but a moment—the nurse stood just exactly where he had left her, and Mrs. Spencer was lying back in her chair with her eyes closed.

Again he lifted the glass—this time it was the one intended for himself—and placed it at the lips of his wife. She drank the contents, swallowed a little of the water he had brought her and thanked him in her sad, sweet way.

"Now for my own cordial," said he, with affected gayety. "I indulge in something a little stronger," and as he spoke he tossed off the mixture.

"It made me stone cold to my fingers' ends to see him do it," said Mrs. Hurd, relating the circumstance to me; "but, Heaven is my witness, I felt not a twinge of conscience. I argued like this:—If it was a simple cordial, as he said, it would do him no harm. If it was poison, his blood would be upon his own sinful head."

He went to bed half an hour afterward, complaining of fatigue. In the morning they found him dead!

I was called to the *post mortem* examination, and we discovered in the stomach of the deceased a sufficient quantity of the deadliest poison known to modern science to kill half a dozen men.

My brother physicians agreed that the man was insane, and had probably taken the dose in one of his unsettled fits of mind. I did not dispute them, but even before Mrs. Hurd told her story I had my own theory in regard to his death.

There was no public exposure, however. Mrs. Hurd and I agreed that it would profit no one to make the wretched affair public, and so we kept our own counsel.

Miss Melrose, in spite of my conviction that she had been an active party in the conspiracy against Mrs. Spencer's life, I could not help pitying. Such a miserable, worn and haggard face as hers I have never seen; and when they buried Dr. Spencer she was confined to her chamber with brain fever.

I attended her in her illness, but although she recovered her health, she never was herself again. She was a harmless maniac whose delight was in gathering flowers and decorating the doctor's grave with them.

She is lying still, and still gathers flowers and lays them on that grave, singing to herself meanwhile a sort of low incantation, which no one ever pretends to understand.

Not until Mrs. Spencer had been many days my wife, and the faithful Mrs. Hurd slept under the violets, did Alicia ever know the perfidy of her former husband.

And when I told her, after the first shock was over, she crept into my arms and whispered:

"But if it had not been for James' crime, I should not have found you, Herbert. So good sometimes does come out of evil."

Sabbath Reading.

THE SABBATH BELL.

How sweetly through the lengthened dell,
  When Wintry airs are mild and clear,
Floats chiming up the Sabbath bell,
  In softened echoes to the ear!
"Come, gentle neighbors, come away,"
So does the welcome summons say;
"Come, friends and kindred, 'tis the time,"
So seems to peal the Sabbath chime.

Done are the week's debasing cares,
  And worldly ways and worldly will,
And earth itself an aspect wears
  Like heaven, so bright, so pure, so still!
Hark, how by turns each mellow note,
Now low, now louder, seems to float,
And falling with the wind's decay,
Like softest music dies away!

"And now," it says, "where heaven resorts,
  Come with a meek and quiet mind;
Oh, worship in these earthly courts,
  But leave your earth-born thoughts behind."
Come, neighbors, while the Sabbath bell
Peals slowly up the winding dell,
Come, friends and kindred, let us share
The sweet and holy rapture there.

NOTHING BUT LEAVES.

IT IS not necessary that I recall the incident. The wearied traveler, the barren fig tree, the curse and its speedy fulfillment, are all familiar to us; and the lesson which our LORD would teach by it, of Christian fruitfulness, is also perfectly understood. The stone over which we, as Christians, stumble, is, I think, not a lack of understanding the lesson taught, but a failure to apply the teaching to our individual selves; and a too great readiness to "fit" it to the case of others whose Christian life we consider very unfruitful. But which of us can point to our life, either past or present, and say—"There is an example of earnest, faithful Christian living: follow it and you will be safe!" I venture to say—not one. And when we part the bright leaves of appearances do we find budding hope's, blossoming promises, rich ripe fruit of Christian endeavor? Or do we find nothing—"Nothing but leaves?" And let none of us so deceive ourselves as to say there is nothing we can do, or that we have no opportunities; for there is not one of us, no matter how humble or obscure our lot may be, but has a work given of GOD to do. It may be patient endurance of petty trials; it may be the monotonous round of every day duties; or it may be the opposite path in life from the one we had chosen for ourselves; but if we are doing it for CHRIST, doing it patiently, cheerfully, trusting in Him, then we may go on rejoicing, for our lives shall bear precious fruit for the Master. But alas for us, if after a life of blessings and privileges and GOD given opportunities, we have to bear up to the Great White Throne nothing but leaves,

L. O. U.

THE SABBATH BREAKER.

LIGHTFOOT says:—"Oh! then I celebrate the Sabbath (saith the Sabbath-breaker), for I do no work, but play and recreate, and drink and sit still, and do no work at all." Friend, dost thou think God ever established idleness and folly by a law? that he hallowed the Sabbath day to be a playing, fooling, sporting day? But, Christian, how rendest thou, as a Christian? "The seventh day is the Sabbath of the Lord thy God!" not a Sabbath for thy lust and laziness. And "in it thou shalt do no manner of work" of thine own, but the work of the Lord thy God. And the rest that he hath commanded is not for idleness, but for piety towards God; for which end he gave all the laws of the first table—viz., to have communion with the world and worldly things that day, and to have it with God; as in Isaiah 58:13, 14, "If thou turn away thy foot from the Sabbath, from doing thy will on my holy day, and call the Sabbath a delight;" as Moses, to betake ourselves to the mount of God, and there to have communion with him; to get into the mount above the world, and there to meet God and converse with him; "to be in the spirit on the Lord's day;" and not to recreate the body, but the soul. To gather spiritual strength for that which, it may be, hath been scattered in our worldly employment.

BEECHER says:—"To be a Christian is to obey Christ, no matter how you feel; but many persons think that after this obedience is rendered, there will be plunged into their souls what is called a Christian experience; and that this experience, coming afterwards, is piety. They therefore attempt to conform to the love of Christ, and then wait for projected or interjected experience which is supposed to be a religious state. It is no doubt better to have the feeling that follows, than to be without it; but the feeling itself is not to be taken for that of which it is simply the fruit, and if there is no feeling, it is not to be taken as evidence that there is no real religious life."

PERHAPS the eye of the Omniscient sees a more flagrant exhibition of selfishness and unbelief and downright irreligion in many luxurious homes of refinement than he sees in some dens of sensual vice, where ignorance is sinning against but small light, under powerful temptation. Pleasing self, without caring whether God is pleased or not, is "sinful pleasure."

Ladies' Port-Folio.

EVERY DAY.

Oh, trifling tasks so often done,
Yet ever to be done anew!
Oh, cares which come with every sun,
Morn after morn the long years through!
We shrink beneath their paltry sway,—
The irksome calls of every day.

The restless sense of wasted power,
The tiresome round of little things,
And hard to bear, as hour by hour
Its tedious iteration brings;
Who shall evade or who delay
The small demands of every day?

The boulder in the torrent's course
By tide and tempest lashed in vain,
Obeys the wave-whirled pebble's force,
And yields its substance grain by grain;
So crumble strongest lives away
Beneath the wear of every day.

Who finds the lion in his lair,
Who tracks the tiger for his life,
May wound them ere they are aware,
Or conquer them in desperate strife,
Yet powerless he to scathe or slay
The vexing gnats of every day.

The steady strain that never stops
Is mightier than the fiercest shock;
The constant fall of water drops
Will groove the adamantine rock;
We feel our noblest powers decay,
In feeble wars with every day.

We rise to meet a heavy blow—
Our souls a sudden bravery fills—
But we endure not always so
The drop by drop of little ills;
We still deplore and still obey
The hard behests of every day.

The heart which boldly faces death
Upon the battle field, and dares
Cannon and bayonet, faints beneath
The needle points of frets and cares:
The stoutest spirits they dismay—
The tiny stings of every day.

And even saints of holy fame,
Whose souls by faith have overcome,
Who wore amid the cruel flame
The molten crown of martyrdom,
Bore not without complaint always
The petty pains of every day.

Ah, more than martyr's aureole,
And more than hero's heart of fire,
We need the humble strength of soul
Which daily toils and ills requires:—
Sweet Patience! grant us, if you may,
An added grace for every day!

[*Elizabeth Akers Allen, in Scribner's for November.*

WOMAN AT HOME.

BY C. H. C.

I WOULD advise the haughty and indolent city lady of fashion not to read this little article, even if she condescends to let her eyes rest for a moment upon the title, because if she does, she may, as the Yankees say, get "*riled*" at some things I mean to talk about. Said lady considers it excessively degrading to soil her delicate hands by doing the least iota of housework. Not hardly to save her life would she make her own bed, and to sweep out her bedchamber would be the excess of vulgarity. As to going near the kitchen—"horrors! don't speak of it!" Let me tell you, fair and sickly and lazy lady, that you might do things more disgraceful and more degrading than even these. An hour or two in the kitchen overseeing your *menage*, or even soiling your white hands so far as to beat up eggs and make a pound cake, or mix up some light biscuit, would be an enlivening change from the monotony of useless worsted or fancy work—or to take a broom and sweep the parlor would be good exercise, and, perchance, call the blood into those sallow cheeks. Then to go into the garden and dig among the flowers and plant choice seeds would enliven your heart and put a brightness into those listless eyes. Life would seem to you a great deal more cheerful when you are weary of frivolity, if you would only do something useful, either for the good of yourself or for that of others. Stylish and wealthy as you may be, do you not often tire of fashion and folly and of the hollowness and deceit you constantly meet with in society, and feel that there is a void in your life, and that you are alone and sad even in the midst of pleasure and excitement? I have known all this myself when abroad, and found that after all this seeking of enjoyment in other places, the "dearest place of all was home."

Would that more of our American women were of a domestic turn, instead of wearing out their lives in the struggle of fashion and excess. There would be more happiness in married life; divorces would be less frequent—for a well-arranged and well-ordered household does much to bind families together. Instead of leaving the most important part of domestic economy to BRIDGET or NORAH, if the wife would superintend or even assist in some of the kitchen affairs there would be great improvements in housekeeping. But the sad truth is, girls are not brought up now-a-days in a domestic manner. If their mothers would instill home-like habits into them while children, they would most likely retain them in mature years. Little girls almost always like to be in the kitchen and "do things;" but instead of encouraging this desire, the mothers take them out, while BIDDY orders them up stairs, "where little ladies ought to stay;" and the poor things, for lack of doing something better, do mischief. Better let them learn to make bread and cake and how to cook and keep house as they ought, instead of practicing airs and affectations before the mirror, as I have seen young girls do, or learning to flaunt finery in the public thoroughfares.

Men would be much more anxious to marry, let me inform *you*, young ladies who do nothing, if they knew they could get domestic, practical women, who would be indeed helpmeets instead of votaries of fashion and gadders abroad. Certainly, no reflective man would wish his wife to refrain entirely from recreation and social amusement; that would be tyranny; air and sunshine are as necessary for the human flower as for the blossom in the garden; either would die without it. Nor would a sensible man and a kind husband wish his wife to be poorly dressed or behind the mode. Following the fashions in a moderate degree is commendable; it is only the *excess* that does the mischief. If women only knew when to stop, and were less inclined to vie with each other in extravagance and show, much time and money might be saved for better purposes.

As to being ashamed or disinclined to attend to household affairs, these are only female weaknesses, which a right-minded woman would strive to trample under foot. Why should she be ashamed to direct, or even to assist, in creating a well-ordered home? She ought rather to be proud of the name of a good housekeeper—and the best housekeepers work themselves. History has recorded many beautiful and gifted women of past ages, who, proud and noble as they were, did not disdain to labor with their own hands. And does not the Holy Book chronicle many of the kind? For instance, we find in the last chapter of Proverbs this description, among others, of a good wife and mother:—"She seeketh wool and flax and worketh willingly with her hands. She looketh *well to the ways of her household and eateth not the bread of idleness.*"

Sycamore Villa, L. I.

JOSEPHINE'S SANCTUARY.

LADY CLEMENTINA DAVIES, in her "Recollections of Society," says:—One room at Malmaison was especially consecrated by JOSEPHINE to the memories of happy days passed there by NAPOLEON before his divorce from her. It was a room then used by him as a study whenever the cares of war and politics permitted him to seek a temporary rest in her society in that charming retreat; and when she was left there alone to mourn their separation, she would allow nobody to occupy this room but herself. In it lay the pen last used there by the Emperor, which the ink had long since corroded; on a table lay the map he had last studied there, the line of march tracked out which had long since taught Europe to feel the power of his battles; on the wall hung a glass case in which some of his hair was arranged in ornamental or symbolic form. It was so long since that hair had grown on his head that the sight of it must have carried back JOSEPHINE'S memory to the time when she, the widowed Vicomtesse de BEAUHARNAIS, determined to marry its owner, the young soldier of fortune, with nothing but "his love and his sword, and his cloak to offer her." Such a sanctuary indeed was this chamber at Malmaison to the ex-Empress that she would not allow any hand but her own to dust or move the objects in it, which had been consecrated, as she deemed, by the touch of the husband who had sacrificed her to his ambition, and in so doing had lost the guiding star, the guardian angel of his life.

WOMAN PERSONALS.

MISS KATE STANTON is delivering through New England a famous lecture on "The Loves of Great Men." In the field of historic recital and illustration, she deals chiefly with such personages as Rachel, Cleopatra and Aspasia in the past. These, together with the "Althea" of Sir Richard Lovelace, the Katherines of Russia, Pompeia, Clodia and Julia of Rome, she treats under a new light. She discants upon Queen Elizabeth and her loves. Of course she does not pass by such characters as the wonderful Lady Hamilton and Heloise and her Abelard. Analyzing the love soul of Madame George Sand, Miss Stanton rises into the most ethereal spheres of sentiment and chastened oratory; but upon the love of Josephine for Napoleon, as the noblest and purest mortal love of which we have record, Miss Stanton dwells most extendedly.

A BRAVE young lady lives in Salt Lake City. Fond to a passion of the grand in nature, she has scaled on foot the highest peaks of the Cottonwoods and explored the cavernous recesses of the deepest mines. We have known her, on several occasions, when prospecting on foot, with staff in hand, the tall peaks of the Wasatch, to compel her male escort first to cry halt. Our fair prospectress being at Alta a day or two since, saw for the first time in operation the wire suspension tramway just completed by the Vallejo Company, and her masculine escort proposed to her, in jest, to take a ride up the wire cable to the mine. She promptly accepted the invitation, when our male friend, growing a little nervous suggested difficulties in the way of the trip, but failed to dissuade her from attempting it. The tramway is 2,380 feet long, rises at an angel of about twenty degrees, and the cable is suspended on stanchions forty feet high. There were no other carriages than ore buckets, and in one of these, which are suspended six feet below the cable, our heroine, undaunted and alone, took passage and made ascent without mishap or serious inconvenience, although the swaying of the wire between the stanchions is calculated to create the sensation of seasickness.

Reading for the Young.

MOTHERHOOD.

She laid it where the sunbeams fall
Unseamed upon the broken wall.
Without a tear, without a groan,
She laid it near a mighty stone,
Which some rude swain had haply cast
Thither in sport long ages past,
And time with mosses had o'erlaid,
And fenced with many a tall grass-blade.
And all about bade roses bloom,
And violets shed their sweet perfume.
There, in its cool and quiet bed,
She set her burden down and fled:
Nor thing, all eager to escape,
One glance upon the perfect shape
That lay, still warm and fresh and fair,
But motionless and soundless there.

No human eye had marked her pass
Across the linden-shadowed grass
Ere yet the minster clock chimed seven:
Only the innocent birds of heaven—
The magpie, and the rook, whose nest
Swings as the elm-tree waves its crest—
And the lithe cricket, and the hour
And huge-limbed hound that guards the door,
Looked on, when, as a summer wind
That, passing, leaves no trace behind,
All unapparelled, barefoot all,
She ran to that old ruined wall,
To leave upon the chill, dank earth
(For ah! she never knew its worth),
Mid hemlock rank, and fern, and ling,
And dews of night, that precious thing!

And there it might have lain forlorn,
From morn till eve, from eve till morn,
But that, by some wild impulse led,
The mother, ere she turned and fled,
One moment stood erect and high;
Then poured into the silent sky
A cry so jubilant, so strange,
That Alice as she strove to 'range
Her rebel ringlets at her glass
Sprang up and gazed across the grass;
Shook back those curls so fair to see,
Clapped her soft hands in childish glee;
And shrieked—her sweet face all aglow,
Her very limbs with rapture shaking—
"My hen has laid an egg, I know;
And only hear the noise she's making!"

[*C. S. Caverley.*

EVENING CHATS.

BY UNCLE CHARLES.

About the Apple.

"HERE, BELLE," I said to-night as I came home, "here is a girl who sends me, through the RURAL NEW-YORKER office, a letter concerning the apple. Now I am going to prepare it—that is, punctuate it, put capitals in it when they are needed, and correct the grammar and orthography (though it is adorably spelled), and print it, if the Editor will permit it, as the first letter received concerning the apple in response to my request in RURAL of Nov. 9. I may say that BELLE has not yet handed in her letter. If she does, and it contains other facts than this one, I will get the Editor to print it. But I hope the boys are not going to let the girls get ahead of them in this business; for boys have or will have to cultivate apples, and they should know at least as much about them as the girls. Here is ALVIRA'S letter:"

THE apple is a fruit of the genus of *Pyrus malus*. A fruit is whatever is produced for the enjoyment of man or animal, by the process of vegetable growth—that part of a plant which contains the seed, especially the juicy, pulpy products of certain plants' covering, and containing the seed, as, for example, the apple, plum, pear, peach, berries, melons, and others. The European crab apple is the species from which all others are supposed to have sprung. Several fruits are sometimes called apples—as the tomato is sometimes called a love apple. The apples of Sodom are described as externally fair, but dissolving into smoke and ashes on being plucked. The peach is called a Persian apple. A berry growing on a thorn-bush is called a thorn apple. A fruit growing in the West Indies is called a custard apple; also, a fruit which closely resembles the custard apple is called a sweet apple, or sweet-sop.

The apple is divided into numerous varieties, a few of which are the Snow Russet, Spitzenburgh, Gilliflower, Stark, Willow Twig, Gilpin, Zimmerman, Lawver, Winter Greening, Talman, Sweet, and Pumpkin Sweet. The apple is in shape very nearly round; color, crimson, red, yellow, green, and yellowish brown, as the Russet. It is suspended from the tree by a stem. A stem is a small branch which joins fruits and flowers to the main branch. The calyx is the cavity where the stem joins the apple. The flavor of the apple varies from sweet to sour. The core is situated in the center of the apple and is divided into cavities which contain the seeds. The seeds are of a dark brown color and vary in numbers from four to twelve, and sometimes more.—ALVIRA L. WHITE.

ALVIRA is not right at all about the calyx, and I want her to study that matter up a little more thoroughly. She has given only one definition of fruit. It has a broader application, though when we talk about a fruit, ordinarily, we mean just what she has described it to be. It is an admirable letter, and I am anxious to see who is going to beat it.

PROF. LOWELL mentions an advertisement that caught his eye some time since:—"Wanted, by a boy, a situation in an eating-house. He is used to the business."

OUR LETTERS FROM BOYS AND GIRLS.

A Sick Little Girl.

DEAR EDITOR OF THE RURAL:—As I see you give us girls and boys a corner in your dear paper to put letters in, I thought I would like to fill a small space, if my writing is worthy of publication. I never have written to the RURAL before, but seeing that others are writing, I thought I would try and write, too. I go to school in town. I am a delicate girl. I have been sick nearly all Summer and Fall. I can do all kinds of work. I have a canary bird. I am twelve years old. I had a great many flowers this Summer, but I have not any house flowers. I have other work to do. I have an organ and can play on it. We have a sewing machine; I can sew on it; I can make some fancy work. I have a little sister; she has a great many little pets. I have a kitten; we call him Jackey. I have a great many toys. Pa does not know of my writing; will he not be surprised if you publish this letter? I will close, for my letter will be too long. I will bid you a kind adieu. Excuse mistakes.

Noble Co., Ind. ALLIE KNOX.

An American Watch.

MY father is Agent for the RURAL and has been ever since I can remember. Year before last he got up a Club of thirty subscribers, for which he received your $20 American Watch. This he made me a present of. I find it to be a very fine time-keeper, and worth as much to me as a gold watch. I live on a farm, and I work on the farm, but I do not like it very well, and have thought some of leaving the farm and learning a trade of some kind, which my father opposes, telling me that I can live easier and be more independent on a farm than I could if I had a trade. I should like to hear the opinion of some of the RURAL boys in regard to this.

BENTON BOY.

The Puzzler.

ILLUSTRATED REBUS.—No. 17.

☞ Answer in two weeks, with the names of those who send correct answers up to that time

MISCELLANEOUS ENIGMA.—No. 6.

I AM composed of 46 letters:
My 25, 34, 28, 30, 16, 37, 15, 40, 3, 22, 20 is a bird found in Europe.
My 45, 41, 6, 20, 8, 13 is a color.
My 10, 23, 32, 26 is a preposition.
My 30, 4, 43, 41 is a chain of mountains in Africa.
My 12, 27, 31, 11 is a cape on the coast of the United States.
My 2, 38, 5, 36 is a quarrel.
My 21, 7, 9, 11 is essential to life.
My 39, 24, 17, 46 was an English statesman.
My 44, 33, 5, 18, 42 is sometimes plenty.
My 29, 31, 40, 35 is a man's name.
My 1, 19 is a pronoun.
My whole is a proverb. E. W. R.

News of the Week.

CURRENT TOPICS.

Tests of Insanity.

THE frequency with which the plea of insanity is made in the case of criminals, and the demand made upon physicians, who are supposed to know more about insanity than any one else, for testimony as experts in such cases, is attracting the attention of the medical profession. R. S. Guernsey recently read a paper before the Medico-Legal Society, in which the whole question seems to us summed up in the following paragraph:

"It is undisputed that insanity is regarded as emanating from the brain, and may be caused by a disease of that organ. It is oftentimes difficult to decide in any given case whether any peculiarity is the result of a very active and one-sided development of the brain or of actual disease. The general principles on which all decisions of this question must be based, are that when any feeling, passion, emotion, or even a special aptitude becomes absolutely ungovernable, so as to make its subject regardless of his own interests or of the well-being of his friends; when, as it were, it absorbs the whole being so as to blunt the reason and conscience and incites to a manner of life and to special deeds that are repugnant to the average institutions of mankind, then we have reason to suspect the existence of insanity. Although the average sentiment and experience of mankind may be an indefinite standard by which to test the sanity of that individual, it is the same by which physicians are to judge of it by comparing the symptoms of disease with those of health.

Preventing Cruelty to Animals.

THERE is a society in New York and other cities, with the above object. A year or more ago, a Frenchman named Louis Bonard died and left the New York Society $150,000. This bequest has been in litigation, but the validity of the will has been established. The operations of the Society have been ostentatious enough during the past few weeks to advertise it thoroughly. Horse cars with one span of sick horses attached, and loaded with seventy-five to one hundred poor human beings, have been stopped in the street, the horses sent to the stable and the poor humans compelled to walk home after they had paid five cents each to insure the sick horses drawing them. The cruelty to these humans has resulted in the most violent advertising of the above-named Society. Now we learn that it is to erect for itself a beautiful block of buildings and secure headquarters adapted to its operations. Seriously, Bergh is doing a good work in compelling one class of brutes to respect the rights of the other class.

Metropolitan Civilization.

SINCE our last issue, some terrible illustrations of the character of and dangers in a Metropolitan city, into the boundaries of which flow with unabating tide, representatives of the worst, and few of the best, classes of people in the world. For example, James C. King shot Anthony F. O'Neil just as he was leaving a court of justice in a building in this city. It was deliberately done, and death resulted at once. Again, a prominent and wealthy citizen of Louisville, Ky., Mr. Geo. M. Peay, left the Brandreth House in this city to go to his hotel, at 2½ o'clock, A. M.; was perfectly sober; there is no possible reason for his voluntary disappearance, but since he made his friend "good night" at the door of the said House, he has not been seen, nor can tidings be obtained of him. He is supposed to have had a good deal of money on his person, and the worst fears are entertained concerning his fate. These are some of the evidences of our Metropolitan character and civilization a single week has afforded.

Henry M. Stanley.

THIS gentleman, who was sent by the New York Herald to find Dr. Livingstone in Africa, and succeeded, has arrived in this country. He was received by the Herald Club, and is likely to have bestowed upon him all the attentions he can support with comfort. He is to lecture through the country, and will doubtless console himself for his isolation in Africa with the dollars free-born American citizens will contribute to look upon his face and listen to his voice. He is generally regarded as having "a big thing" in the notoriety which his adventures have secured to him.

Mrs. Fair Did Not Lecture.

IT is creditable to the citizens of San Francisco that Mrs. Fair's attempt to trade upon her notoriety as a murderess was not allowed to succeed—that she was not permitted to deliver her lecture, "Wolves in the Fold." The topic is a good one; she may have handled it well; but it is not creditable to the American people that the belief exists that the more notorious and repulsive the character of a man or woman, the greater their success as public teachers; and we are glad that for once, at least, this belief has been refuted by practical action.

London International Exhibition.

THE third of the series of London Annual International Exhibitions will be opened at South Kensington in April, 1873, and closed in October, 1873. The Exhibition will take place in the permanent buildings, created for that purpose, adjoining the Royal Horticultural Gardens. It will consist of three divisions: I. Fine Arts; II. Manufactures; III. Recent Scientific Inventions and New Discoveries of all Kinds. The productions of all nations will be admitted. All industrial objects for exhibition must be new. With the view, however, of increasing the educational value of the Exhibition, the Commissioners will, wherever possible, set aside certain spaces for collections of ancient works in the Industrial Division. No rent will be charged for space. The Commissioners will provide glass cases, stands and fittings, steam and water power, and general shafting, free of cost to the exhibitors.

SEMI-BUSINESS PARAGRAPHS.

To Excel in Improvement is the leading element of this country, and no other article of labor-saving machinery has equaled in this respect the sewing machine in rapid strides of improvement. Among them the New Wilson Under-Feed Machine may be counted the leading one in this connection. Mr. W. G. Wilson, its inventor, and President of the Company that manufactures it, makes its improvement his constant study. Everything has been added to it that constant experimenting and science could suggest, and it is offered to the public today without an equal for family use. Light, rapid, beautiful, durable and perfect, the Wilson holds the leading place among the best sewing machines in use. Go and see it. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

Watch No. 1079, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by the United States Watch Co. (Giles, Wales & Co.), has been carried by me two months; its total variation from mean time being half a second.—I. CALVIN SHAFER, 76 Cortlandt St., New York.

Facts for the Ladies. — Mrs. D. MAGRA, Saratoga Springs, New York, has used her Wheeler & Wilson Lock-Stitch Machine about two-thirds of each year since 1860, and earned, annually about $500, with no expense for repairs. See new Improvements and Woods' Lock-Stitch Ripper.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Nov. 25, 1872.

THE past week in Wall Street was signalized by one of those periodical sensations which have not been unusual since the rule of such people as JAY GOULD, HENRY N. SMITH, (not to mention the late JAMES FISK, Jr.,) on the Stock Exchange. The present affair involves the arrest of GOULD for robbing the Erie Road of $9,724,000 on the affidavit of SMITH, who had been caught by GOULD and the VANDERBILT people in a cornering operation of Northwest Stock. The corner was made pretty tight early in the week, and the arrest of GOULD was made on Friday night. It soon transpired, however, that SMITH'S retaliation came at the wrong season for the shorts in Northwestern, himself among the number, for GOULD at once gave orders to his Brokers not to sell Northwestern at any price until he got back from the Sheriff's office, where he had no difficulty in giving bail. The stock consequently began to run up and was soon "out of sight," $200 per share being bid at four o'clock on Friday. Next day the other victims than SMITH and DANIEL DREW were let off at $150 per share, which was no mean loss considering the stock had been contracted at $78 to $85 per share. DREW'S Brokers failing to deliver his stock by two o'clock on Saturday, the President of the Exchange proceeded to buy it in under the rule for their account, and the price again run up to $200 to $230 per share! Mr. DREW will have to settle the differences in cash, but SMITH sets all rules at defiance, not being a member of the Exchange, and the settlements will have to go over to his Brokers, of whom GOULD, as well as himself, is special partner. It is not known at the time of writing this report what is to come of the affair as between these worthies. But the general stock market is higher than on our last quotations, and the bearish speculators are evidently afraid that Northwestern may not prove the only corner.

As a foil to the Northwest corner, SMITH and others have been Bulling Gold and attempting daily corners upon the Bankers and Importers in the Gold Room; but only with partial success, as Gold is now lower than last week. Exchange is lower and abundant and the Exports of Produce are on the increase, as well from New York as from the cotton ports of the South.

Money keeps dear and close, and the Bank return is again weaker in the reserves of Gold and Greenbacks. The Stock Brokers pay 7 per cent. gold interest on call loans and the Note Brokers pay 10@12 per cent. on good merchant paper not accommodated at bank.

General trade, except in the receipts and exports of produce, continues quiet; perhaps partially better than usual late in November. The city shopkeepers are looking forward to a good trade for the holidays.

The following are the comparative movements of the City Banks for the past fortnight:

	Nov. 16.	Nov. 23.
Capital	$88,019,200	$88,019,200
Loans	276,932,000	276,464,300

PRODUCE AND PROVISIONS.

NEW YORK, Monday Nov. 25, 1872.

Beans and Peas.—There has been no abatement in the quick demand for beans, and the advanced prices do not in the least check the inquiry. The supply will be larger as farmers will have more time to spare from this time forward, but there are a good many orders yet to fill even at the firm figures noted. Mediums and marrows sell very nearly alike. Pea beans are very scarce. Kidney are steady and firm. Green peas may be quoted higher, as they are going into use. Canada peas scarce and held above the views of the few buyers. Southern B. E. peas quiet and nominal.

We quote Mediums, prime $3@3.10 per bushel; good do., $2.70@2.80; fair do., $2.25@2.50; prime marrowfats, $3.00@3.15; good do., $2.65@2.75; common and fair do., $2.50. Green peas at $1.80@1.90. Southern black-eyed peas, $2.70@2.75. Canada peas in bond, $1.12.

Brewax.—Exporters are again in market, and prices are stronger. Western is worth 33½@34c. and prime Southern yellow 31@34½c. cash. These prices are for round, collected exporting lots; small odd parcels, as sent from the country, are irregular in price.

Butter.—This is the heavy butter month in New York, but stocks are not working down as freely as dealers desire. The fine grades of stock are just plentiful enough to give buyers the impression that it is nearly as easy of access as it was during the rush of choice earlier in the Fall; and, until that class of stock is worn down closer, it will be difficult for sellers to wheel their customers into a steady movement upon the good and useful table grades that are now lacking attention. At all events the continued demand for best quality gives prices a strong support in the line of firkins and half tubs, especially as the trade cannot run to Welsh tubs as safely as in other seasons. There is a marked irregularity in Welsh goods this year. Some old-time reputable marks are offered as low as 20@22c.; now and then an extra lot will quote along with best half tubs. Old Western butter is not moving, the shipping demand having subsided. Rolls are in good supply and sell well. The extreme quotation is for cloth-wrapped. They should be invariably inclosed in damp, new muslin, no matter if common, as the difference in returns more than compensates for the labor and expense. It is likely that common grades of butter will move faster the coming week, for Thanksgiving pastry purposes.

Orange Co, pails, fine, 36@38c.; Penn. and N. J. pails, good to fine, 29@35c.; common, 15@28c.; selections, half tubs, 35@36c.; half tubs in lots, 28@30c.; good to prime firkins, 27@29c.; do. Welsh, Fall, 27@28c.; Welsh tubs, fair, 20@23c.; other grades of State, 18@22c.; Western Reserve, choice, 21@22c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c. State dairies, tubs on, 29@32c.; do. all firkins, 28@30c. Rolls, choice, 21@23c.; do., fair to good, 18@20c.; do., common, 16c.

Cheese.—The market is almost lifeless. Shippers will give the extreme prices only in cases where special orders are to be filled, and the home trade can also supply itself at similar figures. As before, the impression is that a positive decline must occur before the surplus can be reduced to any extent. There are but few good Western here.

We quote State factory, choice, 14@14½c.; good to prime, 13½@13¾c.; fair, 12@13c.; State dairy, 12½@13½ for good to prime; 10@12c. for fair lots; for Ohio factory, 10@11½c. for fair to prime; English dairy, prime, 13½@14c.; fair do., 11½@13c.

Cotton—Advanced to 19c. for low middling upland under a strong market for contracts, but closed with a slight reaction. The business has been very small. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16⅝	16⅝	17	17¼
Good Ordinary	18⅜	18⅜	18⅜	19¼
Strict Good do.	18 13-16	19	19⅛	19½
Low Middling	19	19¼	19⅝	19¾
Middling	19½	19¾	20	20¼
Good Middling	20½	20⅜	21⅛	21⅜

For forward delivery sales on the basis of low middling are as follows:—Nov., 19½c.; Dec., 18½c. Jan., 18¾c.; Feb., 19c.

Dried Fruits.—The late active trade in apples has left the market somewhat firmer. Peaches are quiet but no lower. Small fruits are active and firm.

Southern apples, 5½6c.; do. sliced, 7@9c.; Western, 5@5½c. Peeled peaches at 14@17c. for Ga., 14@16c. for Va., and 16@20c. for North Carolina. Unpeeled peaches at 5½c. for quarters, and 6c. for halves. Cherries, 22@22½c. Plums, 14@19c. Blackberries, 9@9½c. Raspberries, 33@34c.

Eggs.—Fresh are scarce and the prospective active demand that Thanksgiving warrants renders the market very firm. Limed are abundant, but choice, smooth State are doing better in the absence of fresh. Fresh Western 33@34c., State 35c., near points 36c., limed 25@27c.

Flour.—The market is decidedly more active, and shipping grades have advanced.

Superfine State	$5 80	@	6 15
Common extra do	6 85	@	6 95
Good to choice do	7 00	@	7 10
Fancy do	7 15	@	7 65
Superfine Michigan, Indiana, Ohio, Iowa	5 80	@	6 15
Extra do	6 70	@	7 00
Choice extra do	7 05	@	7 75
Shipping brands round hoop Ohio	6 90	@	7 15
Trade brands do	7 20	@	9 50
Good to choice white wheat extras	7 80	@	8 75
Fair to very choice extra Minnesota	7 56	@	9 00
Common to fair extra St. Louis	7 10	@	8 30
Good to choice do	8 75	@	11 00
Extra Southern	7 10	@	9 15
Good to choice do	9 20	@	12 00
Rye, common to fine	4 50	@	5 75
Corn meal, Western	3 40	@	3 50
Buckwheat flour	3 10	@	4 55

Fresh Fruits.—The export continues very heavy, embracing again quite 10,000 lbs. Prices are very firm and Western stock is held at full figures. Most of the stock gone ab oad is N. J. and river. Dealers, although some of the shipments of mixed grades have not turned out very profitably, think that we have choice, well-keeping sorts that will eventually compete with the celebrated Newtown pippins. Grapes are quiet. This week may start them up a little. Pears are scarce. A car load of California Winter Nelis and Vicars sold at $4@5.50 per box, and a small invoice of Muscat and Tokay grapes 15@30c. per lb. The West is giving us a sample of its cranberry crop. The quality is fine and outsells our best Cape.

We quote—Apples, common, $1.25@1.75; do. fair to good, $2@2.50; do. fine, $2.75@3.00; do. lady, $6@9. Pears—Com. ₰ bbl., $5@6; do. Vicar, $5@7; do. Winter Nelis, $8@9; Cal., case, $4@5.50. Grapes.—Catawba, 8@10c.; Isabella, 5@7c. Cranberries, prime, per crate, $3.25@3.50; com. to fair, $2.50@3; bbls., $9@10.50; choice bbls., $11.50@12.50.

Grain.—Wheat advanced early in the week under a good shipping business, but has declined since to about old figures. We quote at $1.44@1.51 for No. 2 Spring afloat; $1.58@1.59 for No. 1, do.; $1.58@1.65 for Winter Red Western; $1.66@1.74 for Amber, and

$1.73@2 for White. Barley is quiet; sales of choice Western at 95c., and prime Canada West at $1.17. Corn is moderately active at 61@65c. for Western mixed afloat, 68@70c. for Western white. Oats closed dull at 42@43c. for new Western mixed, 48@50c. for new black Western.

Hay and Straw.—The market is poorly supplied and very full prices have been obtained. Largest arrivals are expected in a few days and the demand is small. We quote new shipping hay at $1.10; retail do., $1.10@1.75; salt, do., 70@90c.; clover, 80@90c. Straw at $1.30@1.15 for long rye, $1@$1.20c. for short rye; 80@90c. for oat.

Hops.—The arrivals are larger, both of foreign and domestic growths, but the demand is improving, and prices are very firm.

New York, growth 1872, at 33@38c.; Eastern do., 33@38c.; Western do., 33@38c.; Yearlings '71 20@35c.; Olds '70 10@15c.; Old Olds, '68–69 8@10c.; Bavarians, 35@40c.; English, 30@35c; Belgian, nominal, 28@30c.

Poultry and Game.—Some of the local reports intensely magnified the poultry disease, and for one or two days the trade was completely stopped; even now that buyers have had the assurance of investigation by the press, and the fact of witnessing as fine a grade of stock as we ever receive at this season, they still have great aversion to taking more than can be used up surely. The scare helps game some, and prices are firmer. Quotations for poultry are very unsettled, and the following are the best current prices to-day:—Dressed turkeys, 17@20c. Chickens, 11@17c. Geese, 11@15c. Ducks, 14@15c. Canvas-back ducks are abundant and cheap. Venison, whole deer, 9@11c.; do., saddle, 11@16c.; do., extra do., 18c. Black ducks, 62@80c.; broadbills, &c., 30@50c., canvas-back, $1.75@2. red heads, $1@2. Prairie chickens, per pair, $1@1.05. Rabbits, 35@40c. Quail, $1.75@2. Hares, 60@75c. Partridges, Eastern, 50@75c.; do., State, $1@1.10. Mallard, 70@85c. Buffalo humps, 10@12c.

Provisions.—There is no demand for mess pork in round lots, and for several days prices have been nominal at $15. Present crop has sold for Dec. at $14 and new for same month $14.50. There is a fair jobbing trade in mess, and prices have worked up to $16 again, after selling down to $15.40 during the week. The only remaining lot of prime mess was closed out Friday at $15. Beef is steady, without further large movement. Texas beef begins to arrive. Prime mess tex., quoted $21@22; India mess do., $23@25. Extra mess, bbls., $11@15. Plain mess, $10@12. Beef hams are active at $33. Cut meats have been largely marked down, without leading to active business. City goods are about all that are quotable. Pickled hams, 10@12c.; do., shoulders, 5½@5¾c. Smoked ham, 13@14½c.; do. Shoulders, 7c. Bellies in bulk, 8@8½c.; do. boxed, 8½c. Fresh hams, 8@8¾c. Bacon is weak, cash long clear selling at 8c., and that is a full price for Nov. Future bacon Western meats quoted at 7¾c., for long and short clear. Lard is firm for wooden bound Western, at 8¾c.; city dull, at 8¾@8½c. for steam and kettle; No. 1, 8c., with but little of the latter offering at 8c. Stearine is in good demand, at 9c.; for tes. to arrive and 8¾c. for bbds. Tallow is weak. 9c. is an extreme price; the range is 8¾@9c.

Seeds.—New clover will bring 9¾@9¾c., the latter price for strictly choice lots. There is a small demand for timothy at $3@3.37½. Rough flax quiet, at $1.90@2.

Sundries.—Honey is selling freely at 28@30c. for dark and 32@35c. for white, in glass boxes; mixed lots, 21c. Cider at 6@10c. per gallon. Feathers, live geese, new, fine, per lb., 60@70c.; do. mixed, 40@50c.; hen, 7@9c.; vinegar, cider, ₽ gal., 20@25c.; do. manufactured, 15@20c.; newspapers, ₽ lb. 4@4½c.; white rags, 5@5½c.

Tobacco.—The export business has been very fair for this season of the year, and stocks have become reduced. No changes are made in prices.

QUOTATIONS—NEW CROP.

Wool.—The market has less excitement, but the recent advance is firmly held. Sales of Ohio fleeces at 65c., extra pulled 61@65c., super do. 55@60c., California Fall clip 30c., Cape 40@45c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Nov. 23, 1872.

THE market at Little Falls for the week ending Nov. 23d, has been more active, and transactions much larger than for the previous week. The delivery of farm dairies at the railroad depot was about 700 boxes, and sales were made at 13@13¾@13c., the latter figure being paid for only two or three extra fancy lots.

The offerings of factory were estimated to reach more than 10,000 boxes, and the sales amounted to 7,000. We give the leading transactions as follows:

Beecher	13¾	Ladue	14¼
Brockway	13¾	Nash & Keeler	14
Brookman's Corners	13¾	Nichols	14
Cole	13½	Paine's Hollow	13¾
Coryl	14	Wm. Peck	14
Countryman	14	Schuyler	14
Dairy Hill	14	Smith	13¾
Eatonville	14	St. Johnsville	14
J. D. Ives	14	Turner & Welch	14
Little Falls Central	14	Warren Center	13¾

Butter has come in quite plentifully, and sales were made at 30@33c., according to quality.

We have advices from abroad for the first week in November. Our London correspondent says that for fine, clean flavored cheese, September make, there is a good demand, also for secondary sorts. The best American is quoted at 70@72s.; fine, 66@68s.; good, 56@60s. The other descriptions sell as follows:—English Cheddar, 76@88s.; Wiltshire, double, 66@76s.; Cheshire, medium, 56@68s.; fine, 72@80s.; Scotch, 56@76s. Dutch Cheese:—Edams, 50@63s.; Gondas, 50@58s.; Derbyshape, 56@62.

In butter, Irish is steady, while in foreign the turn is in favor of buyers. We quote Clonmells 120@128s.; Corks, 128@130s.; Normandy, extra, 136s.; Canadian, 90@110s. The corresponding prices last year for Clonmells was 128s.; Corks, 130s.; and for American cheese, 66s.

The weather in Herkimer during the early part of the week was cool, with a light flurry of snow and a little frost. Dairymen now begin to feed coarse fodder.

LIVE STOCK MARKETS.

NEW YORK, Nov. 23, 1872.

THE live stock trade has been helped by an absurd story of diseased poultry. It is charged that butchers, in order to hold on to that trade which is usually turned over to the poultry stands Thanksgiving week, managed to circulate the report that the horse disease had gone over into the chickens, and that poultry was wholly unsafe to eat. The thing got into the papers and frightened the old women badly, so that turkeys and chickens were discarded and the rib-roasts were called for in their places. This has created a good demand for fat cattle and prices are well kept up, notwithstanding the increased supply. Sheep and hogs are also in larger numbers, with a pretty good demand.

RECEIPTS OF LIVE STOCK

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	9,718	87	1,570	31,424	59,268
" last week	7,646	75	1,403	28,161	51,713
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—A few extra fine cattle begin to arrive for the approaching holliday. Sales of such have been made as high as 15½c. here, while contracts made on the farm were still higher, but they were for fancy animals of extra fatness. The supply of cattle has been quite in excess of what it was the previous week, the gain being some 1,100 head. Texans are abundant and rather lower, owing to the increased call for prime stock to make a good show for Thanksgiving. Aware of the fact that poultry was selling poorly, the butchers are striving to render their stalls inviting with fat quarters and sets of ribs. Trade has been somewhat uniform since last report, all the fat cattle going off quickly, and at full prices, while Texans and other ordinary stock rather drags, and prices of such are tending downward. Some of the old dry cows, little steers, and half-fed heifers from the frozen-out pastures of Northern New York have been even poorer than Texans, and sold at lower prices. Cattle dealers have had a favorable week upon the whole. We know of some droves which cleared the owners nearly $40 per head, but a portion of this was needed to cover former losses. As samples of the closing rates we note 3 cars State cattle, poor, 4¾cwt., at $39 each; 2 cars uneven O., 5½@10 cwt., at 11@13¾c.; 1 car 7¾cwt. O. steers at 13¾@14c.; 16 cars Texans, 5¾ cwt., at 9½c.; and 5 cars Cherokees 1,225 lbs. gross, at 10¾@10¾c.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₽ lb	14 @ 14½	14 @ 14½
Good to prime	13 @ 13¾	13 @ 13½
Medium	12 @ 12¾	12 @ 12½
Poorest grade	7 @ 10	8½ @ 10
Average sales	12¾ @	12 @

Hogs.—The arrivals are large, and the market closes tame. At first an attempt was made to advance dressed hogs ¼c., and it partially succeeded, but the "bear" element was strongest and forced them down again. While a few choice live were sold at 5 1-16c. the regular price is 4¾@5c., with city dressed at 5½@6c. for heavy to medium, and 6¾@6¾c. for light. State and Jersey sell at 7@8½c.

Milch Cows.—The higher ruling of milk and scarcity of fresh cows cause an advance of $2@3 per head on average lots. The demand continues to run ahead of the supply, but the call is for good milkers. Quotations, $100@60 for quite ordinary to only medium cows; $65@75 for fair, and $80@90 for prime to extra.

Sheep and Lambs.—Arrivals are large and all save the finest are rather lower. The quality is taking a very wide range. Some holiday stock of heavy mutton sheep weighing 150 lbs. sell at 7½c., while good lots of fine wool, 90@45 lbs. go at 6¾c.; fair at 5¾@6¼c. and from these prices down to 5c. for poor, and 4c. for bucks. Lambs are selling all the way from 6¼c for thin Western up to 8c. for good Pennsylvania and 8½c. for prime Canada. A few extra Shade went at 9c. Some of the closing sales were 2 cars 78 lbs.; O. sheep at 5¾c.; 1 car, 85 lbs., 6¾c.; a car Canada lambs, 73 lbs., 8c.; a car, 85½ lbs., 8¾c. a car 91 lbs. Mo. sheep 6¾c., a car poor 61 lbs. Ohio sheep, 5c. The average of 4,458 sheep was $4.86 each, with 610 lambs at $5.61, the quality being generally ordinary. A better class of 8,981 sheep and lambs averaged $5.71.

Veal Calves.—The market is so well supplied with dressed veals—though most of them are of poor quality—that prices are less firm but not much lower. The finest Bucks Co. live calves sell at 11c., but buyers object to the price when they can get fat, hog-dressed at 14@15c. Very many dressed calves from the grass fields sell at 6@8c. There were 27 grass calves just sold alive at $7 each.

SPECIAL NOTICES.

A Positive Radical Cure for Rupture.—The Elastic Truss Company, at No. 683 Broadway, New York, will send their Descriptive Circulars to any person afflicted with Hernia. This Truss can be sent by mail to any part of the country.

SAFE AND PROFITABLE INVESTMENT.

THE CHICAGO AND CANADA SOUTHERN.

FIRST MORTGAGE SINKING FUND 30 YEARS'

7 PER CENT. GOLD BONDS.

INTEREST PAYABLE APRIL AND OCTOBER, REGISTERED OR COUPON, PAYABLE IN LONDON OR NEW YORK,

AT 90 AND ACCRUED INTEREST IN CURRENCY.

THIS ROAD, WITH THE CANADA SOUTHERN, FORMS THE NEW TRUNK AIR-LINE FROM BUFFALO TO CHICAGO. IT IS UNDER THE SAME CONTROL AND MANAGEMENT, AND IS BEING BUILT BY THE SAME PARTIES WHO BUILT THE CANADA SOUTHERN:—MILTON COURTRIGHT, JOHN F. TRACY, DAVID DOWS, WILLIAM L. SCOTT, HENRY FARNAM, R. A. FORSYTH, JOHN M. BURKE, M. L. SYKES, JR., ALL DIRECTORS BOTH IN THE CHICAGO AND NORTHWEST AND THE CHICAGO AND ROCK ISLAND; GEORGE OPDYKE, OF THE NEW YORK MIDLAND; SIDNEY DILLON, DANIEL DREW, JOHN ROSS, DAVID STEWART, SAMUEL J. TILDEN, KENYON COX, AND OTHER PROMINENT RAILROAD MEN. THE ROAD IS BEING RAPIDLY BUILT IN THE BEST POSSIBLE MANNER, WITH SIXTY-POUND STEEL RAILS THROUGHOUT ITS ENTIRE LINE, AND WILL BE COMPLETED DURING THE COMING YEAR; NEARLY ONE-HALF OF THE ROAD WILL BE COMPLETED AND IN RUNNING ORDER BY THE 1ST OF JANUARY NEXT, SO THAT THE ENTIRE LINE, FROM BUFFALO TO CHICAGO, WILL, WITHIN THAT TIME, BE IN SUCCESSFUL OPERATION. THE BUILDERS OF THIS ROAD CONTROL ENOUGH OF THE LEADING LINES RUNNING FROM CHICAGO TO INSURE AN ENORMOUS BUSINESS FROM THE START. TAKING INTO CONSIDERATION THE IMPORTANT FACT, PATENT TO ALL WHO STUDY THE STATISTICS OF TRADE, THAT THE PRESENT TRUNK LINES, NOW TAXED TO THEIR UTMOST CAPACITY, ARE NOT AFFORDING FACILITIES EQUAL TO THE GREAT AND CONSTANTLY-INCREASING DEMAND FOR TRANSPORTATION, AND THAT THIS ROAD, THROUGH ITS ENTIRE LENGTH, BEING PRACTICALLY STRAIGHT AND LEVEL AND SHORTER BY THIRTY-FIVE MILES THAN BY ANY OTHER NOW BUILT, OR THAT CAN BE BUILT, IT MUST BE APPARENT THAT THIS LINE IS NOT ONLY NEEDED, BUT MUST BE A GREAT SUCCESS. THE PROCEEDS OF THESE BONDS WILL COMPLETE AND EQUIP THE ENTIRE ROAD, AND WE CONFIDENTLY RECOMMEND THEM AS A MOST SAFE AND PROFITABLE INVESTMENT.

Our Young Folks.

J. T. TROWBRIDGE, and LUCY LARCOM, Editors.

OUR YOUNG FOLKS FOR 1873

Will have the following attractive features:

"Doing His Best," a Serial Story to run through the year, by J. T. TROWBRIDGE. This Serial, though complete in itself, will continue the stories of "Jack Hazard's Fortunes" and "A Chance for Himself," which have been so remarkably popular.

Short Serials and Stories of especial interest to Girls.

Sketches of Travel and Scenes in Strange Countries.

Historical and Biographical Sketches, giving Anecdotes of the Youth and Early Struggles of Famous Men.

Conversational and Entertaining Papers on the Photograph, the Telegraph, and other Wonders of Modern Art and Science.

Popular articles on **Astronomy, Electricity, etc.**

Sketches of Natural History, comprising curious anecdotes of our dumb friends.

Regular or Occasional Contributions may be expected from HARVEY WILDER, C. A. STEPHENS, LUCY LARCOM, MRS. A. M. DIAZ, PROF. F. W. CLARKE, MISS E. STUART PHELPS, MRS. A. D. T. WHITNEY, MRS. CELIA THAXTER, MARIAN DOUGLAS, NORA PERRY, HELEN C. WEEKS, and other popular writers.

"It is our opinion that no such racy, natural and inspiring writing for the rising generation is done anywhere as in that happy literary circle whence issues monthly 'Our Young Folks.'"—*Buffalo Courier.*

TERMS.—Single copies, 20 cents. $2 a year in advance. An extra copy for Three New Subscriptions. OUR YOUNG FOLKS and ATLANTIC MONTHLY, $5.

SPECIAL OFFER.—A copy of either of Mr. Trowbridge's books, "Jack Hazard," "A Chance for Himself," and "Lawrence's Adventures;" any one of the new stories by C. A. Stephens, "Camping Out," "Left on Labrador," and "Off to the Geysers;" Aldrich's "Story of a Bad Boy;" "Marjorie's Quest;" or any of Mrs. Whitney's books, "Leslie Goldthwaite," "We Girls," and "Real Folks," will be given to any one sending Three new Subscriptions for OUR YOUNG FOLKS, two of these books to any one sending Five new Subscriptions, and four for Ten.

JAMES R. OSGOOD & CO., Publishers, Boston.

Oliver Ditson & Co. Announce

That they were happily untouched by the recent GREAT FIRE, and are busy, as usual, in attending to their extensive orders.

They now call attention, also, to their

"THE CHRISTIAN GRACES." FAITH, HOPE, CHARITY.

"And now abideth Faith, Hope and Charity; these three, but the greatest of these is Charity."

It is a long time since anything has appeared in Christian art so lovely and so exquisite in design and execution as this elegant steel engraving "THE CHRISTIAN GRACES." The grouping of the figures is graceful beyond conception, and the faces of such rare and heavenly beauty, that it seems as if the artist must have seen them in a vision. Every subscriber to "ARTHUR'S HOME MAGAZINE" for 1873 will receive a copy of this splendid $5 picture FREE. Price of Home Magazine, $2.50 a year. Specimen copy of Magazine 15 cents.

LOCAL AGENTS WANTED everywhere to get subscribers for our beautiful Magazine, so well known for the last twenty-five years, and so great a favorite with the people. Intelligent men and women can make large commissions. Send for agents' confidential circular. You can hardly show "The Christian Graces," to any person of taste and fine religious feelings, without getting a subscriber. No disappointment about prompt delivery of pictures, as we have made ample arrangements for their rapid production. T. S. ARTHUR & SON, 809 & 811 Chestnut St., Philadelphia, Pa.

New Publications.

THE YOUTH'S COMPANION
A WEEKLY PAPER FOR
YOUNG PEOPLE AND THE FAMILY

THE COMPANION aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible; and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated, and has for contributors some of the most attractive writers in the country. Among these are:

Prof. James De Mille,	**Louise C. Moulton,**
Louisa M. Alcott,	**"Sophie May,"**
Grace Greenwood,	**C. A. Stephens,**
Rebecca H. Davis,	**Ruth Chesterfield,**
C. W. Flanders,	**M. A. Denison,**
S. S. Robbins,	**Prof. H. Lincoln.**

Its reading is adapted to the old and young, is very varied in its character, sprightly and entertaining. It gives

Stories of Adventure,	**Stories of Home and**
Letters of Travel,	**School Life,**
Editorials upon Current Topics,	**Tales, Poetry,**
Historical Articles,	**Selections for Declamation,**
Biograph'l Sketches,	**Anecdotes, Puzzles,**
Religious Articles,	**Facts and Incidents.**

Subscription Price, $1.50. Specimen copies sent free. Address

Agents Wanted for
GOD'S SIX DAYS' WORK
Or, SCIENCE AND THE BIBLE.

This book gives the very cream of Science, making its thrilling realities, beauties, wonders and sparkling gems a hundred-fold more interesting than fiction. Every man, woman and child wants to read it. It is endorsed by the Press, and Ministers of all denominations.

GEO. W. EATON, D. D., LL. D., *President of Hamilton Theological Seminary,* says:—"The author has worthily conceived of the stupendous, amazing and overpowering splendor of the Divine Hand in Creation, and set forth his conceptions, in language of uncommon force, clearness and beauty. Its religious spirit is reverent, loyal, devout and fervent. It is worthy of all praise." Sales immense. Agents report 52—45—46—80—87 and 93 copies per week. Great inducements to Agents.

Employment for Young Men, Ladies, Teachers and Clergymen in every county. Send for Circular. Also, Agents wanted for the

Peoples Standard Edition of the Holy Bible,

Which, in addition to the sacred text, and all the important features of other editions, contains a "History of the Books of the Bible," an "Inter-Biblical History," a "History of all Religious Denominations," over sixty "Historical and Chronological Tables," arranged on a new basis, numerous full-page engravings, a handsome chromo Marriage Certificate, a Family Record, and **A Gallery of 536 Illustrations** and descriptions, embracing "An Illustrated Life of Christ," "An Illustrated Life of Paul," "An Illustrated History of Palestine," Illustrated Sketches of Jerusalem, Patmos and the Seven Churches, Egypt, The Exode, and Assyria; also, Illustrated Sketches of the Houses, Costumes, Arts and Sciences, Religious Rites and Emblems, Trees and Plants, Animals, Writings and Coins in Bible times. All our own Agents for other books, and many Agents for other Publishers, are selling this Bible with wonderful success, because it is the most valuable, beautiful, and popular edition now in the market, and is sold at a very low price. Fine bindings (of both books), for HOLIDAY PRESENTS. Canvassing books free to working Agents. Address ZIEGLER & M'CURDY, Phila, Pa., or Cincinnati, O.

Agencies for the Great Work,
LIVINGSTONE LOST AND FOUND,

will be given out. The whole story told in a volume of nearly 800 pages and over 50 full-page engravings and maps, illustrating the routes and journeys of Stanley and other explorers in Africa. **Price only $3.50.** Prospectus now ready. $25 a day can be made on this book. Send for agencies to

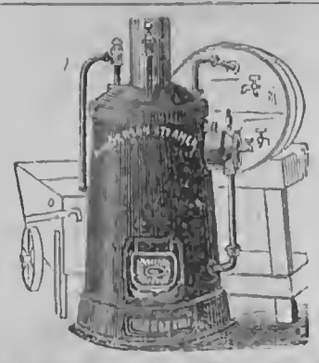
Address C. C. POST, Manuf. and Patentee, Burlington, Vt.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats, Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler—No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing

Anderson's Low Pressure Steam Heater,

for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

For further particulars, address

Goux Absorbent Closet & Urinal.

SANITARY—CONVENIENT—PROFITABLE

to Public Institutions, Schools, Manufactories, Farmers, Gardeners and others.

The Goux Fertilizing & Sanitary Co. offer, by the use of their Patent Absorbent Closets and Urinals, a method of collecting, deodorizing and utilizing human excreta, at once convenient, inoffensive and economical.

The liquid is separated from the solid excrement by absorption, all the valuable properties of each are retained, and the product is an invaluable manure.

For explanation and practical exhibition of the system, call at Office and Warerooms of Company, corner of Varick, Vestry and Canal Sts., New York.

O'HARA'S DOLLAR CORN SHELLER has beaten all rivals. *Two to one.* **O'Hara's Practical Corn Husker**, latest and best. Both sent by mail, pre-paid, for $1.75. **O'Hara's Comfortable Chair**, recommended by Dr. HALL, of Hall's Journal of Health. Elegant Office or Rocking Chair, only $10. Agents wanted.

C. M. O'HARA, Hillsboro, Ohio.

This Machine with present improvements is guaranteed to meet every want of the household, for either plain or fancy work. It knits all sizes of Stockings and Socks, with heel and toe complete, and is a never-ending source of amusement to ladies of leisure, as well as profit and easy support to those that require it.

Agents wanted every where by the BICKFORD KNITTING MACHINE COMPANY. DANA BICKFORD, President and General Business Supt., 689 Broadway, New York.

Implements, Machinery, &c.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

WEED SEWING MACHINE CO.,
HARTFORD, CONN.

REPRESENTED IN ALL THE PRINCIPAL CITIES AND TOWNS.

REPORT OF JUDGES

AT THE SECOND

INTERNATIONAL INDUSTRIAL EXPOSITION

OF THE

MECHANICS' INSTITUTE:

TO THE EXHIBITION COMMITTEE:

Gentlemen: The undersigned, Judges in Department 1, Group 7, report that they have carefully and impartially examined, according to the "Instructions to Judges" transmitted to them, the several competing articles submitted for their judgment, and that the following are their conclusions:

No. 795. American Watches. Entered by

T. & E. DICKINSON,

Buffalo, N. Y.

"T. & E. Dickinson, exhibit American Watches, manufactured by the United States Watch Co., (Giles, Wales & Co.) Marion, N. J.

"These Watches are, without doubt, the best manufactured in this country."

ALLEN CHURCH,
GEO. I. BENTLEY,
B. S. BENTLEY, } *Judges.*

I hereby certify, that the above is a correct copy of the report of Judges on Entry No. 795, and that the same was awarded First Premium. (Large Medal.)

D. B. McNISH,

Buffalo, N. Y., Dec. 29th, 1871. *Secretary.*

Price List furnished the Trade on application, inclosing business card. For sale by the Trade generally.

Ask your Jeweler to see the MARION

WATCHES.

BEWARE of worthless imitations with which the country is flooded. To avoid imposition, see that the words MARION, N. J., are engraved on the plate over the Main-Spring Barrel. All others are spurious.

TO INVESTORS

We are selling at par and interest, and recommend to careful investors the First Mortgage Seven-Thirty Gold Bonds of the Northern Pacific Railroad Company. Special attention is called to the ample Land security on which these bonds rest, in addition to the usual guarantee of a first mortage on the Road, its equipments and earnings. The lands of the Company thus far sold have realized $5.97 per acre. The grant averages about 23,000 acres per mile of road.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

Field Crops.

COW-HORN TURNIP.

Long Early White Vertus of Vilmorin.

WHILE at Ridgewood, N. J., a few days since, we visited the farm of Mr. JAMES KULEY, one of our well-known New York merchants, who takes as much delight in farming as he does in fancy woolens and kindred fabrics. After dinner we took a stroll over the farm. The first field we entered had been seeded down according to the new system of sowing grass seed alone, and not with grain, as generally practiced by our farmers. The seed was sown the last of August, and the grass is now two inches high, completely covering the ground as handsomely as any man could desire. We wish those who have doubts in regard to the advisability of sowing grass seed alone, could see this one field and judge for themselves whether the system is a good one or otherwise.

If the grass at the KULEY farm promised well, the turnip crop was a realization, and as the workmen were busy gathering it we took particular notice of the yield, which certainly exceeded anything of the kind we have ever seen in this vicinity, the variety being the Cow-Horn, a long white turnip, resembling in appearance the white sugar beet. We selected a fair specimen, from which the accompanying illustration was made. Mr. KULEY informed us that the seed was sown August 2d. As the seed were scattered broadcast, of course no after cultivation was given; soil light, sandy loam, well enriched with barnyard manure. The quality of this variety is fully equal to the Purple Top, White Norfolk, and similar well-known sorts, while the form gives it a decided advantage over all the globular varieties, inasmuch as it does not occupy so great a surface, making up in length what it may lack in breadth. We selected a specimen four inches in diameter, and one of the Yellow Stone turnips from our field of the same diameter, and weighed both; the former was equal to five of the latter.

This Cow-Horn turnip grows much above ground, and is usually about a foot long, flesh white, solid and meaty. It is an excellent table variety, but should be kept in a cool place during the winter, the same as other late sorts, or it will become spongy. BURR, in his Field and Garden Vegetables of America, says of this variety:—"The skin is smooth and shining, white below the surface of the ground and green at the top; the flesh is white, tender and sugary; early, very productive, and remarkable for its regular form and good quality; as a field turnip it is one of the best, and when pulled young, good for the table."

Mr. KULEY informed us that he had cultivated this variety for several years in preference to any other, as it yielded enormously; and, in addition to its good qualities, was one of the most convenient varieties for handling, in pulling, topping, and cutting up for cattle.

COW-HORN TURNIP.

MANURES FOR EARLY PEA

A CORRESPONDENT at Portsmouth, Virginia, writes the RURAL NEW-YORKER that he has been very successful in growing green peas by the use of gas-house lime. In 1868 he planted four bushels of the Hancock pea upon four acres of poor sandy soil, and from it received 150 barrels of peas, using no other manures in their production than about 60 bushels of gas-house lime to the acre. This product was twice as great as when horse manure was applied in the row upon the same kind of soil Last season he used night soil and wood ashes—about two-fifths ashes and about 50 bushels of each applied in the drills. The crop came forward three days earlier than his neighbor's, which were manured with horse manure and planted two weeks earlier. The coming season he has 85 acres to put into peas; manure is hard to get, and he asks us to tell him what is a reasonable quantity of Peruvian guano to use to the acre on sandy soil, which will not produce over 20 bushels of corn per acre, and where the peas are put in drills four feet apart. He also asks if it will hasten the maturity of the pea by sprouting them about forty-eight hours before sowing them. He adds:

"The old-fashioned way of growing peas here is to plant them and let them go without cultivating until they come out in bloom; then they plow them and throw heavy furrows up to them to prevent them falling over, which I find does them more harm than good, as I have tried it—so treating ten rows in the center of the field, and find they will not yield half as much, and the vines are sickly and dry ten days earlier than when they have had no soil thrown up to them. I never hoe my peas, but I plow once from the row and then plow twice with a cabbage plow; and the last time I plow I can run my plow fifteen inches deep, and I find the peas to be much larger and three to five days earlier, and the vines are as green when I pick the last peas as when I commenced picking."

We have never used guano in any shape, except in a dilute form, for watering plants; but we know it is used on light sandy soils at the rate of 200 to 500 pounds per acre. It is a hot, stimulating manure. No lime nor ashes should be mixed with it, because they would expel the ammonia from it. It is better to mix it before using—especially for sandy soils, with four or five times its bulk of vegetable mold—even loam may be used if the muck cannot be obtained; add to this muck charcoal or gypsum, or both; keep this compost under cover till used; don't let it get wet. In this shape you can apply it safely in the drills, or spread it broadcast, as you choose. Guano is a manure which acts quickly, and quickly exhausts its powers; and those who use it find it profitable often to give two applications of it to the same crop.

No doubt the coming up of your peas may be hastened by sprouting. Sometimes guano, very much diluted—say one pound to fifteen or twenty gallons of water—is used for soaking seeds before planting. Care must be taken that the soak be not too strong; for if it is, it will destroy the germ of the seed altogether.

HILL VS. LEVEL CULTURE.

ON the first day of June I planted a piece of land containing one-eighth of an acre, with Peerless potatoes; soil a light sandy loam. It was manured with a small shovelful of yard manure in the hill. One-half of the piece in alternate rows was hilled; the other half kept as near level as possible. The part hilled produced six bushels of large, marketable potatoes and three bushels of small potatoes. The part not hilled produced six bushels and fifty-five pounds of large and two bushels and two pounds of small potatoes—a difference of fifty-five pounds of large in favor of the part not hilled, and a difference of fifty pounds of small in favor of the part hilled. The potatoes on the part not hilled were much larger and better than those in the part hilled. The season here has been a very wet one; therefore, I think more favorable for potatoes hilled than a dry one would have been. I believe a great

deal of worse than useless labor is expended in hilling potatoes, as well as corn and other crops. Won't some of the farmers in different parts of the country try the experiment of level culture of potatoes next year, and report the result to the RURAL NEW-YORKER?

Experiment with Applying Superphosphate to Potatoes.

I also planted one-fourth of an acre with Peerless, with just one bushel cut to single eyes, two pieces in each hill; soil, light sandy loam, manured with a shovelful of yard manure to four hills. On half of the piece in alternate rows, a small tablespoonful of superphosphate was put in each hill. Before the last hoeing a handful of unleached wood ashes was put on the hills of the whole piece. The half on which phosphate was put produced seventeen bushels and ten pounds of large, and five bushels and fifty pounds of small potatoes. The part where no phosphate was put produced thirteen bushels and thirty-five pounds of large, and seven bushels and fifty-five pounds of small potatoes—a gain of three bushels and thirty-five pounds of large potatoes in favor of the phosphate, and a gain of two bushels and five pounds of small potatoes in favor of no phosphate. The value of the phosphate applied to one-eighth of an acre was fifty cents.

I have cultivated some twenty-five varieties of potatoes, and think the Peerless is the best of them all in quality, productiveness and freedom from disease. Several varieties planted close to the Peerless this year rotted badly, while scarcely a tuber of the Peerless was affected. L. W. G.

Amherst, Mass.

SOWING GRASS SEEDS.

WE prefer (in answer to several inquiries on our table) to sow grass seed early in the Fall, or late in Summer, so that the plant may get well established before the ground freezes. If sowed late in the Fall, and yet early enough for the seed, to germinate the young plants are more likely to winter-kill and the seed is lost. If the seeding cannot be done early in the Fall, wait until February to April. Sown at any time after February the seed will germinate early and get a full season's growth.

We recommend the reseeding of both pastures and meadows. Especially is it important in the case of meadows where the practice is to cut the crop while in bloom or before the seed drops; and especially if it is in the main a Timothy meadow. For Timothy is a biennial grass and will "run out" in two years if not renewed by reseeding—hence the remark common among farmers that the red clover runs the Timothy out. This rule also applies to closely fed pastures. The constant cropping with only the tough, wiry, wild grasses which the stock will not eat, going to seed, soon runs out the better sorts, unless seed is sown more frequently than it is. Harrow over the old pastures and give them a re-seeding with white clover, orchard grass, Timothy, redtop, etc., once in two or three years, and increased forage will repay the trouble.

Lands that are overflowed in the Fall and Winter, and are liable to be washed badly by such overflow, whether pasture or meadow, are better for frequent re-seeding. Indeed, it is essential if the tame grasses are to be kept in them at all; otherwise the coarse, innutritious marsh grasses will surely succeed them. On such lands the seeds should be sown as soon as the water has subsided from them in Spring.

FIELD NOTES AND QUERIES.

Oswego Potato.—This is the name of a new seedling grown by S. Worden of Oswego county, New York, which he says was raised from a seed ball of Early Rose, fertilized with Vanderveer. Grown beside Early Rose, Campbell's Late Rose, Excelsior, Peerless, Davis' Seedling and others, in yield it was not excelled by any. He has grown them three years without sign of rot. Tops bushy, light green, ripen with Davis' seedling; produce but few small ones. He says nothing as regards their comparative quality.

The Late Roses.—A half-dozen potatoes, more or less, called respectively "Late Rose," yet all unlike and each said to excel the other, were put on the market last Spring. Cannot some of the RURAL's readers who have grown them give us some information as to their respective merits?—F. G.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Camellias Blooming.—*Nov.* 18.—The opening of several Camellia flowers this morning reminds me of the many complaints I have heard about the uncertainty of success with these beautiful plants. It is true there is an abundance of time for camellias to drop their buds, as these are formed five or six months before the flowers appear, and extremes in dryness or too much water will certainly produce disastrous results; but too high a temperature is more fatal than either of the other two, still I do not know of any exotic evergreen that will succeed with less care. I think that too frequent watering, re-potting and the application of stimulating manures, kills more camellias than neglect. I have cultivated many varieties of this plant with success; in fact a dozen choice sorts was almost my first venture in house plants, when a young man, and before the RURAL NEW-YORKER existed, and although my treatment may not differ materially from that generally practiced by florists, I will give it for the benefit of those who are not successful. I prefer a good, stiff, but rich, loamy soil and leaf mold from the woods, in equal parts. If the soil is not rich enough, a very little old cow manure is added; but this should be broken up fine and thoroughly incorporated with the other two. When plants are received from dealers the ball about the roots should not be broken, but placed in pots a little larger than the ones in which they were grown. If taken from a five-inch pot, put them in a six-inch, giving plenty of drainage; and be careful to pack the fresh soil firmly about the roots, for if this is neglected, the water applied after re-potting will pass down the sides of the pots, and not soak into the soil about the roots.

I re-pot my plants only once a year, doing this just after blooming. The plants then commence their new growth, and from this time until Spring give plenty of water overhead, washing the leaves thoroughly with clean water every evening, but never apply it when the sun is shining upon the plants. The temperature of a house where other tender plants are grown is usually too high for camellias; but by placing them in the coolest part, or where fresh air can be frequently given, they will not suffer.

As soon as all danger of frost is over I remove the plants to a shady place in the open ground, and plunge the pots up to the rim in sand or other light soil, and let them remain there until there is danger of freezing in the Fall. During the Summer they are watered occasionally if there is a drouth, or danger that they will suffer for want of moisture. When brought in from the open ground the plants should be placed in an atmosphere that is not above 55 to 65° Fahr., and given plenty of air, shading the plants during the middle of the day. Camellias require a cool atmosphere while blooming; even a little frost is not so injurious as too great heat. In wintering, apply it liberally whenever required; but do not give a little at a time and every day, for this will only moisten the surface while the center of the ball of earth about the roots may remain dry as dust. All that is required is to keep the entire soil moist but not constantly saturated with water. If the plants become sickly and the leaves turn yellow and drop off, re-pot and remove all the soil from the roots and wash clean, then put them in fresh soil, and cut away the greater portion of the branches.

Exochordia Grandiflora.—*Nov.* 19.—I procured a plant of this beautiful Chinese shrub several years ago, and planted it in the border adjoining my lawn, where it has grown rapidly, showing its magnificent flowers every Spring and in the greatest profusion. This plant is yet so scarce in the nurseries that very small specimens sell for a dollar each. I think the scarcity and consequent high price is owing to the difficulty of propagation; at least, it has puzzled me more or less for several years, as cuttings of ripe wood have failed to show any signs of rooting, no matter how carefully handled. Perhaps cuttings of the green wood, grown under glass, might do better; this method I have not tried, but shall the present Winter. I put down layers two years ago, and they failed to produce roots the first season; but upon examination to-day, I find about half are well furnished with roots and in good condition for removal from the parent plant. This waiting two years for layers to produce roots is not a very rapid method of propagation, still, the *Exochordia* is no worse than Moss Roses, Magnolias, and many other plants that might be named.

This Chinese novelty is a grand addition to our gardens, and if it is difficult to propagate it will be more highly appreciated. One of the best representations of a mature plant that I have seen, appeared in the RURAL NEW-YORKER of Oct. 30, 1869.

Taking Up Rooted Cuttings.—*Nov.* 21.—As long as the ground remains open I try to find something for my men to do that will save time next Spring. To-day they have been taking up the cuttings of shrubs, currants and grape vines, planted last Spring. Most of these would no doubt pass through the Winter unharmed if left where they had grown, but to make good plants next year they will require transplanting in order to give them more room, therefore if taken up and heeled-in this Fall, so much time will be gained on next Spring's work. In addition to this there is danger of injury to small, feebly-rooted cuttings being thrown out by the frosts of Winter, but if taken up in the Fall of the first season and carefully buried this is avoided. Seedlings of forest and fruit trees often suffer by being drawn out by frosts the first season, especially if grown in soils not well underdrained, and the only safe way of preserving is to take up and heel-in. If there was no danger of field mice gnawing them, a light mulch of leaves or course hay would prevent heaving out during the Winter and Spring. The first Winter is the uncertain time with all hardy plants raised from cuttings or seeds.

No Plants For Sale.—*Nov.* 23.—I conclude from the many letters addressed to me (care of the RURAL NEW-YORKER) that a majority of our people think a man cannot write about plants or anything else except for the purpose of making money out of the same. A few weeks since I mentioned my bed of Bush Alpine Strawberries; immediately there came a score of letters asking the price of plants, and the same thing has occurred in regard to other plants that I have named in this Diary. I now beg to inform the readers of these columns, that "Daily Rural Life" has no plants of any kind for sale, and it is useless to write him on the subject. But I am not penurious, selfish or deaf to the expressed wants of those who are not as rich in the beautiful things of this world as myself, and shall always be pleased to exchange plants; or plants for insects, minerals, shells or other specimens belonging to any branch of natural history. Every man and woman is said to have a soft side, or a weak spot, if we can only find it; and I own that mine is to love a knowledge of nature far more than money; and if anybody desires to make me feel their attacks, they must hit me there.

Hygienic Information.

HYGIENIC NOTES.

Remedy for Painful Wounds.—The enclosed is excellent and ought to be published once a year. I found it in a paper sometime ago, have tried it and can recommend it from experience:—Take a pan or shovel with burning coals and sprinkle upon them common brown sugar, and hold the wounded part in the smoke. In a few minutes the pain will be allayed, and recovery proceeds rapidly. In my case a rusty nail had made a bad wound in the bottom of my foot. The pain and nervous irritation was severe. This was all removed by holding it in the smoke for fifteen minutes, and I was able to resume my reading in comfort. We have often recommended it to others with like results. Last week one of my men had a finger nail torn out by a pair of ice tongs. It became very painful, as was to have been expected. Held in sugar smoke for twenty minutes, the pain ceased, and promised speedy recovery.

Camphor Ointment.—One ounce of spermaceti; 1 oz. white wax; ½ oz. camphor gum; 2 oz. lard; melt over a slow fire. Add the camphor gum after the other has dissolved.—V. R.

Hygienic Inquiries.—"An old subscriber" asks some one to furnish him a receipe for good stimulating bitters without liquor—is billious and has cold feet.

The Herdsman.

GARGET AND BLOODY MILK.

I HAVE had considerable experience with cows having the above complaint, for the past few years, and have tried various remedies, such as saltpeter, pulverized very fine, giving one tablespoonful at a dose, mixed with one quart of bran or meal; then I have used with good success, skoke (or improperly poke) root, by scraping or chopping the root very fine, and administering it by cutting out the heart of a good-sized potato, putting the ingredients in it and then giving it to the animal. In many localities this root can not be found; and then if it is wanted after the ground is frozen, it is hard to be got. It might be dug in the Summer or Fall and kept for future use, but I would prefer the fresh root.

One year ago, two of my heifers had the above complaint very bad, so I got a prescription of a veterinary surgeon and thought that I had them cured; but in a couple of weeks, the disease made its appearance again, as bad as ever. I had heard that beans were good for garget, so I thought that I would try them, and did so with good success. Scald one quart of white, black, or yellow beans, letting them stand for an hour or so to thoroughly soften, and give the above amount per cow, morning and night, for severe cases. In order to administer it, mix the beans with a little meal, applying some salt to the mixture. Try it and report in the columns of the RURAL. LEXINGTON.

Rochester, N. Y.

HEREFORDS VS. SHORT-HORNS.

THE late Gov. CRAPO, Flint, Mich., had a herd of Herefords of which he said:—"The Herefords have done extremely well; in fact they could have done no better. They have had no more than ordinary keeping and yet they are in prime condition, and their coats are very fine. I have little doubt that the Herefords will yet be the stock for Michigan. They are docile and hardy, besides being very easy keepers, and I have no doubt will stand a long, severe Winter, and come out ahead of the Short-Horns in the Spring on two-thirds the cost of keeping. I am pleased with them, and shall increase the number of my herd as rapidly as possible, being confident that as soon as their merits are known they will be appreciated. There is now almost a mania through the country in favor of the Short-Horns, which I am free to admit are a noble and valuable breed of cattle; but they are adapted to the luxuriant pastures and milder climate of Kentucky rather than to Michigan. I am obliged to feed my Short-Horns nearly twice the grain that I do the Herefords to keep them in the same condition. Short-Horns are undoubtedly a valuable breed with which to procure grades by crossing with our common stock, where meat is the object; but for a thoroughbred race of cattle, I have no doubt that in Michigan the Herefords for grazing purposes will prove unrivaled."

BLACK-LEG IN CATTLE.

A CORRESPONDENT of the RURAL NEW-YORKER of Nov. 16th, asks for a cure for black-leg in cattle. You confess you know nothing of the disease. YOUATT & MARTIN describe it under the head of "inflammatory fever." It is also called "joint murrain," "quarter evil," etc. In this vicinity it is quite common, and is accepted as incurable, the disease running its course in from twelve to twenty-four hours, and has been known to kill in eight to ten hours from the first perceivable symptoms. Depletion is the remedy, or, rather, prevention. A little blood-letting from the tail, (or even ears,) physic, and a change to short pastures, or one not quite so rich. It nearly always attacks young cattle in good flesh, hence the treatment. In neighborhoods where this disease is prevalent, salt ought to be fed freely, and if mixed with sulphur occasionally, all the better. After the symptoms appear, I never saw anything done that saved life; have seen it prolonged by heavy blood-letting for several hours. It is as well, however, to kill the poor beast and end its misery. S. E. WILLARD.

Herkimer N. Y.

Growing and Breaking a Yoke of Steers.—Will some of your readers give me instructions for growing and breaking a yoke of steers.—OLD SUBSCRIBER.

Dairy Husbandry.

NEW DEVICES FOR DAIRYMEN.

DAIRY fixtures were not largely represented at the recent N. Y. State Fair, and yet there were some novelties in this class that deserve attention. It is gratifying to note any invention which is calculated to better promote the health and comfort of our domestic animals. The

Gifford Swinging Stanchion

is an improvement on the old-fashioned stanchion, which will commend itself to every dairyman who has had any experience in handling milk stock. Serious objections have from time to time been raised against the use of the old-fashiond stanchion, as confining the cows too rigidly in one position, allowing scarcely any movement of the shoulders backward or forward, or from side to side. The fault is perhaps most apparent when the animal on lying down attempts to rise. If the head is far thrust forward and the shoulders near the standards, the animal has considerable difficulty in getting upon her feet. On attempting to rise, the shoulders strike against the standards, and from the confined position of the head and neck the animal will often be compelled to struggle and exert all its strength to regain an upright posture. Cows, heavy with calf, not unfrequently slip and strain themselves. Again, in reaching for hay, the pressing forward against the unyielding standards causes the cows to slip and fall. Some have claimed that this slipping and struggling and straining, on account of using the old-fashioned stanchion, is the cause, indirectly, of the prevailing pest of the herds in old dairy districts, viz., abortion; and although we do not regard this position as proven, or indeed as probable from the facts brought out in connection with this disease, still there may be cases where abortion has resulted from a slip or strain in the stanchion. But although there are objections against the use of stanchions, they are altogether too convenient to be abandoned for other modes of confining cows, such as tying with rope or chain or the box stall.

The swinging stanchion is designed to remove all the objections which have been urged against the old-fashioned stanchion, while at the same time it is made more convenient, inasmuch as the animals fasten themselves in place. The stanchions, too, are more readily opened, and are more easily repaired. In this device the stanchion is hung at the upper end, allowing it to swing forward when the animal is rising to its feet or reaching for food. Each stanchion can be readily unhung without interfering with the others. The stanchion is opened by pressing on the handle of a lever, the opposite end of which rises against a pin raising and unlocking the bar or standard, thus opening the stanchion. The lever has a notch which catches the pin and holds it open. In fastening, the stanchion is so constructed that the animal on lowering its head for food pushes down the lever from the pin, thus allowing the bar or side standard to descend, where it is instantly fastened. The stanchions are also made so as to have a slight side movement. This is a recent invention, and exhibited this year for the first at the State Fair.

Feed Box and Manger Combined.

This is another new and convenient device for dairy stock. It consists simply in a set of tight, well-made boxes arranged on a board in sections, one in front of each cow. The board is hung with strong iron hinges to the floor. In raising and throwing back the board on its hinges it rests on the back edges of the boxes in a slanting position, thus forming a good manger for hay. By turning down the board the boxes are in place before each animal, where salt, meal, slop, or the like, may be fed. The arrangement is altogether the best we have seen—simple, substantial, easily kept clean and inexpensive.

Implement for Butter-Making.

A number of years ago, when the cold water system, in connection with butter making, first took its rise in Orange Co., we visited that section and wrote out a very full account of the plan and its advantages. Our opinion, in regard to the principle of holding milk at an even temperature by means of cold water for the production of cream as thus announced, has not changed, and we are glad to know that the principle has now come to be generally acknowledged as correct by our best butter makers. But during the past few years various mechanical devices have been invented for applying the water to the milk, so as to be adapted to farm dairies as well as factories, and at comparatively little cost.

The Jewett Pan,

shown at the Fair, has been some time before the public, and in its practical working has a most excellent record. It is simply a pan with a double bottom, or rather a double pan, the lower one for water and the upper one for the milk. The water is conducted between the two pans in several channels, backward and forward, and thus, being constantly supplied with running water from the spring, which is being constantly discharged from the pan, after traversing through all the channels under the milk, cools and regulates the temperature of the milk in a uniform manner. The Jewett pan is of a size to hold the entire mess of milk from the herd at one milking, and four pans complete a set. They are placed side by side on tables, and are provided with the accompanying pipes, stop cocks, &c., for draining off the water and the removal of the milk.

The Orange County Pan

is somewhat similar in form to the Jewett, but differs in its construction in this: the pans are arranged in wooden vats, the one above the other, on a frame, and the water passes in one sheet underneath the milk. The advantage, if any, claimed over the Jewett, is that the set of four pans occupy less space in the room—a set of four pans and two racks can be used in a room eight by ten feet. No advantage is claimed over the Jewett pan in regulating temperature, and there is no advantage; the Jewett plan, of conducting the water in channels, being probably the best. We believe the exhibition, this year, was the first in which the Orange county pan has been shown at the State Fair.

The Cattaraugus Pans,

brought out during 1872, are arranged in sets of four single pans setting within one large water pan, divided by partitions, so that the water may be circulated around one single pan, or around all, as may be desired. The four pans, comprising the set, are arranged in a wood frame supporting them, and of convenient hight to strain the milk and skim the cream. Cold water is admitted to the space or spaces between each or all the pans at the center and top of the set by means of a funnel, with few outlets conducting the water to each or all of the pans at one or the same time, as wanted. The water is discharged from the outer pan by a conducting pipe. The inner pans may be removed for cleaning, &c. There was another pan on exhibition called the

Blake Pan,

that differed from those above described in having the water on the side of the pan and not underneath the milk. All these devices are for setting milk shallow, though doubtless the pans can be made for deep setting without changing materially the other leading features of construction upon which their merits rest.

Hall's Creamer.

The cooler and cream raiser, exhibited by AMOS HALL, is entirely different in construction from those above described. It is an original in its design, and promises to be a very useful invention. The device shown was of a size adapted to a dairy of twenty cows. It consisted of four tin cans, each twenty inches deep and twenty inches in diameter. Each can was placed in a wooden tub, with space between the can and tub on the sides and bottom for the reception of water. In the center of each can there was arranged a double scroll of tin, movable and hung upon wires. This scroll is made by bending the tin over wire, so as to make space for water one-quarter inch thick by three and a-half inches wide, the two scrolls, when joined together, making a thin flat circular piece of hollow tin, seven inches wide. From the upper end of the scroll a pipe is erected, surmounted with a funnel for the reception of the water. At the lower end of the scroll there is another pipe coming up and going over the tin cans, for the discharge of the water into the space between the can and the tub. Now, in the operation of this apparatus, after the milk is strained into the can, the scroll is introduced, and sinks in the milk to a point below that which will be occupied by the cream. Water is now turned from the penstock or reservoir into the pipe leading to the scroll, and the milk receives a thin sheet of water in the center of the can, and from thence falling on the outside, fill the space between the tubs and can, and then flows off into a reservoir for the purpose. When the cream is up it is dipped off, and does not come in contact with the scroll which is below.

Connected with this apparatus there is a refrigerator which receives the waste water, and when it is cooled it can be used over again in case there is no running water or in case water is scarce. After being cooled the water is pumped into an upper reservoir of the refrigerator, and then is conducted to the pipes and made to do its service over again. With a barrel and a-half of water, the milk from twenty cows may be cooled daily and kept at a temperture of 60° or lower for a week, during the hottest weather of Summer, while the consumption of ice to supply the refrigerator will be no more than twenty pounds per day. A syphon is used for drawing off the milk from the cans. The arrangements for drawing off water, removal of the cans for cleaning, etc., are all simple and convenient, and Mr. HALL stated that in the practical operation of this apparatus, during the past Summer, he could show a higher percentage of butter from a given quantity of milk than he had ever seen on record by other methods of setting. We hope to get a statement soon from Mr. HALL for publication, showing the result of his operations during the past summer.

Firkin for Transporting Butter in Hot Weather.

The Palmer refrigerating butter pail is a recently invented contrivance for transporting butter in hot weather. It consists of two tubs, the one setting inside of the other, and held in place by brackets so that there shall be a half-inch space between the two. The outside tub is about twenty inches in diameter at the top. When the inside tub is filled with butter it is covered with a cloth, and upon this is placed a perforated lid or cover. Then upon the top of this is placed the tin ice chamber, having a tightly-fitting cover. It holds from seven to ten pounds of ice. The chamber has holes in the bottom for the escape of water formed from the melting ice, and as it passes out it flows into the space between the tubs. The whole is now covered with a lid which presses down upon the ice chamber and also covers the outside tub to which it is fastened. When the package arrives in market, the lid and ice chamber are removed, and the pail of butter may be taken out of its case for marketing; or the water may be drawn off and more ice be placed in the ice chamber, and the butter thus held firm and hard for a few days longer. The device is quite simple in its parts, and appears to be well adapted to shipping packages of butter of thirty or more pounds put up in pails. There were several other inventions on exhibition, but they were not so new or original in construction as to merit notice in this connection.

The Vineyard.

RACKING WINE.

THE following essay, read before the Nauvoo, Ill., Grape and Wine Growers' Club, will command the attention of grape growers and wine manufacturers:—It has often been asked, When is the proper time to rack our wines? I now propose to answer the question.

Generally speaking, there is no very positive rule as to the time most favorable for racking. Some rack early, even when their wine is not clear; others rack late. It may be said that it is fancy which answers for a rule; yet their happen circumstances that deserve to be taken into consideration, for wine does not possess each year the same constitution. This diversity may necessitate modifications in the rackings, and vary their time.

What is that which, through the operation of racking, we strive to take out of the wine? The lees, that is to say, a mixture of tartar, vegetable fibers much comminuted, of ferment decomposed during the fermentation, of ferment still undecomposed, always in quantity in wine of bad years, and in those of coarse grapes; coloring matter, extracts, etc.

Of all these substances there is none that can in any way contribute to the preservation of a wine, while there are some, the pure undecomposed ferment especially, whose action, when under favorable circumstances, is eminently able to hurt it.

Contrary to the opinion of a few popular vintners, I hold that the disturbance of wine is not alone due to the effects of temperature. *Wine feels all the motions of the vine;* it is a fact easily witnessed. Who that has not seen his wine remain quiet in June when the mercury stood at the highest, while in the latter part of July and in August, the heat, instead of increasing, often lowers quite sensibly, and wine on the contrary, becomes deeply agitated? It is a fact which I have time and again observed, when the seed in the berry is about being perfected.

It is on these principles, and in regard to the influences the motions of the vine possess upon wine; it is also from the quality—better or worse—of this liquid; or, if preferable, from the proportion more or less abundant of its ferment, that we should judge of the oportunity, and of the most favorable time for racking.

December Racking.—When wine is surcharged with fermenting matter (lees) it is proper to rack it towards the end of December. The cold weather usual at that time is a very favorable condition for this operation.

The importance of racking rests in the fact that it clears wine from its course lees; that it prepares the racking for March, and causes it to be always more perfect—yet it should never take its place. This December racking may be particularly useful to wines coming from rich soils, to inferior wines, or to those that are made from unripe grapes, and which contain a large proportion of acids and ferment.

It is a well demonstrated fact that the less sugar a wine has, the more acids and ferment it contains.

March Racking.—No racking, in my opinion, is so important and deserving of careful attention as the March racking. This operation should be done especially during dry winds. N. N. E. winds possess the great merit of liberating the wine from its sediments.

When it is done carefully, leaving no lees to disturb the wine, it allows this liquid to bear with impunity the warm weather and the many phases of agitation which it has to undergo from the swellings of the buds to the maturity of the grapes, and to successfuly come out from these numerous trials.

It is necessary, then, to consider this racking as absolutely indispensable; it cannot be too strongly urged upon all vintners who desire to possess wines that will keep:—this racking, well done, can, in a pinch, enable us to dispense with all others.

The neglect of this important operation is always to be much regretted, as it often gives rise to serious disorders; it is that which particularly causes wine to sour.

Racking Inferior Wines.—It should never be forgotten that such wines are, of all wines, those that most need racking. In fact, why do we rack wine? Is it not to prevent it from becoming agitated from sourling? Then it is really the best way to guard against so serious a disorder; and under no pretext should any one dispense with this important operation at the times I have specified as most suitable. The constitution of such wines is so weak and so destitute of the preserving elements, that they would certainly turn during hot weather and thunder storms, if they were not freed from the sediment they always produce in quantity. Two rackings cannot certainly be too much to obtain this desired result. This is why I do insist upon it; there is no other wine that claims it so earnestly.

Some vintners may believe that I exaggerate. "We save our wines with but one racking, why should we practice two?"

Certainly one racking in March, well done, may prevent the wine from spoiling; but I wish more. I wish to make it better; to endow it with stronger keeping qualities; and as we are handling a wine loaded with ferment, it cannot be doubted but that two rackings the first year will more effectually accomplish this purpose; but, as I have said before, to attain the desired result, the rackings must be made in clear, dry weather, and as much as possible with a North wind. It may be asked, Why should wine be racked in clear, dry, weather, and with a North wind? The difference between the North and the South wind might, on first impression, appear doubtful. South winds may be sufficiently cold and dry not to differ much from those of the North which at times are just as damp and warm, but since the discovery of ozone we can understand the difference. It is not in the heat, nor in the degree of dampness; it is most likely in the presence of ozone carried along with South winds from regions where electricity is ever producing it. Ozone is a particular kind of oxygen, discovered by VAN MARUM—quite active and very damaging to animal and vegetable liquids. It can sour wines, soups, fruits, etc. This is

why vintners with practical experience have long advised to choose a particular state of the atmosphere. The intention is to prevent, as far as possible, the direful effects of this air. It happens in this way: The weather being clear, there is a perceptible evaporation on the surface of the wine racked, and this evaporation allows no real contact between the air and the wine. In cold weather the evaporation is not so strong, and the consequent loss of wine is diminished; in cloudy, damp, rainy weather, there would hardly be any evaporation, and the air coming in close contact with the wine might determine a dangerous alteration.

Racking the Wine of Good Years.—The wines of such years, and more especially those of choice vines—and by choice I mean such as Elsinburg, Delaware, Iona, Cynthiana, Norton, etc., in contradistinction with the coarser varieties, such as Isabella, Concord, Ives, Martha—contain much sugar. They must consequently contain a lesser quantity of lees. I feel disposed, on that account, to modify my advice in regard to these wines. Their constitution does not require two rackings the first year, like those I have mentioned before; and, except in particular circumstances, the *March* racking will be sufficient, provided it completely frees them from their deposit.

In the following rules are condensed the necessary conditions which alone can insure a successful racking:

1. All vessels, pails, buckets, through which the racking is done, must be clean and sweet. The energy with which tartaric acid acts on metals, should forbid the use of anything but wood.

2. It must be done in clear, dry weather, and, as far as possible, during a north wind, as it is then only that the deposit of the lees can be complete.

3. Avoid this operation in damp, rainy weather, and while strong south winds prevail.

4. Never rack during a thunder storm. At such time those parts of the lees that are lightest rise through the wine, and cause a fermenting action always to be feared.

VINEYARD NOTES.

Eumelan and Iona Grapes.—I would like to ask a question about the Eumelan and Iona grapes. Are the vines healthy and hardy? Do they ripen with the Concord, or are they later?—A SUBSCRIBER.

THE Iona usually ripens about with the Concord, sometimes a little earlier. In congenial soils and localities the vine is hardy and a vigorous grower, but elsewhere it is exactly the reverse. For instance, in some pastures of Central New York, especially on the banks of the small lakes of that region, we would not want a better grape; but in New Jersey and in pastures of the Middle and Southern States the Iona is almost a total failure.

The Eumelan is an early variety that promises well, but it may not succeed over a wider range of country than the Iona. The vine is hardy and prolific wherever it grows, vigorous and healthy, and this is about all that can be said of any variety. A grape may be very desirable in one soil and not worth cultivating in another, even in the same neighborhood; one sort may succeed admirably and another fail in the same garden. To learn this is one of the secrets of grape culture.

What Buds Give the Best Grapes.—The Pacific Rural Press says:—"We would mention a fact which has come within our observation and experience, which, if generally true, is of some importance. It is this:—That the fruit bud from the base of the past year's cane throws out larger and better developed grapes than either the first or second. The grapes from these buds seem also better flavored, and generally superior to those on the first and second. In accordance with this hint we have adopted the plan of cutting the cane at such length as to leave the third bud, generally, and sometimes the fourth, when a good strong one, and then rubbing off the first and second buds, and leaving the third and fourth for fruit. The number of fruit buds left on the vine must depend on the age and strength of the vine. If the vines are strong and vigorous at three years, from two to three bunches of grapes may be allowed to mature on each without injury.

Smoke and Frost.—A Congress of vine growers has been held this Autumn in the South of France, whose members, before separating, tried a most interesting experiment. This is a plan to counteract the destructive effects of frost—which at certain critical periods is fatal to their crops—by the creation of clouds of warm smoke which shall hover over the ground. Iron vessels, containing a preparation principally of tar, having been disposed at intervals over the vineyards, were set fire to, and produced thick clouds, which hovered over the land and spread for miles around. An important point in the plan is its cheapness.

The Naturalist.

FUR-BEARING ANIMALS—VIII.

THE CANADA LYNX.

Lynx Canadensis.—GEOFFROY.

THE Canada Lynx exists, though in moderate numbers, North of the great lakes and East of the Rocky Mountains. It occurs, though sparingly in some of the New England States, and in Northern New York.

THE CANADA LYNX.

This species has a body about thirty-four inches long; tail, five inches. It has a rounder, broader and shorter head than the Bay Lynx or Wild Cat; nose, obtuse; eyes, large, bright; teeth, very strong; ears, acute, tipped by a long, slender tuft of coarse hairs; a broad ruff of long hairs surrounds the throat and reaches the chin, shorter in the female; body, robust, thick, heavy; thighs, strong; legs, thick, clumsy; feet, thick, heavily made with strong, white claws that are not seen unless the fur be put aside; toes, so hairy as not to show in the tracks, which are round, and with no mark of nails, except when made in running; nails, curved and acuminate; tail, covered with hair, slightly turned up, shorter than head: hair, woolly; under fur, dense and soft, on under surface thinner and longer than above, all mixed with somewhat rigid hairs, two inches long. Face and around the eyes, light gray; general color, gray above, a little clouded with irregular, darker spots; under surface, dull white; broad spots of dark brown on inside of fore legs and along the belly; upper surface of tail to near the tip, and extension of thighs, rufous; yellowish-white beneath; tip of tail and tuft of ear, black; ruff under throat, light gray, mixed in center with long tufts of black hair.

This Lynx is more retired than the Wild Cat, keeping, chiefly, far from the habitations of even remote settlers. It lives in the depths of the wilderness, in extended wooded countries or in new growths of burnt districts. Like all animals of prey, it is able to support a long fast without injury. It feeds on grouse, wild geese and other birds; on the Northern hare, gray rabbit, squirrels and other quadrupeds; and sometimes, when pressed by great hunger, attacks larger animals; farmers in the wilder portions of Canada complain of its carrying off their lambs and pigs.

In prowling for food it moves stealthily and slowly and often crouches, and lies in wait for its victim to pass or to come from its home, when it pounces upon it, from above. It breeds once a year and has two young at a time.

The Lynx is usually taken in a steel trap which it enters readily. AUDUBON says, "when alarmed or pursued, it leaps in successive bounds, straight away from danger, and, if hard pressed by the dogs, takes to a tree. It is very strong, having powerful fore legs and claws, and can leap from a considerable hight to the ground without feeling the jar, alighting on all four feet at the same instant, ready for flight or battle." He says it never attacks man.

Dr. RICHARDSON says:—"It swims well and will cross the arm of a lake two miles wide." Within a few years, two of this species have been killed near here, on the Vermont shore of Lake Champlain. One was shot, when discovered stealing a domestic goose, the other was treed by a dog and then shot.

The skin of the Lynx is sold for two or three dollars. It is used for muffs, collars and the like. The flesh is white and some say like rabbit, and as good; but it must take a keen appetite to relish the flesh of this cat-like animal. R.

The Poultry Yard.

SORE EYES IN SPANISH FOWLS.

IN reply to the inquiry of your correspondent, T. J. W., Adrian, Mich., in the RURAL NEW-YORKER of Nov. 16th, I will give my experience with reference to treatment, not cause. I am an amateur in the poultry business, hence cannot treat of causes. I have about fifty Black Spanish chickens, one dozen Light Brahmas, and about forty common, mostly a cross between my choice stock and common fowls. The Spanish fowls only seem inclined to disease, and this about the head. My first experience was with a laying pullet. On opening the chicken house one morning, I noticed her drooping; and upon close examination found her head hot, right eye greatly swollen, with an offensive watery discharge. I at once restricted food and began treatment. First, gently pressed the eye, to remove all foreign substance; then bathed the head, neck and eye with a dilution of carbolic acid, (about ten drops to one ounce of water), saturating the neck thoroughly; also comb and wattles; and lest there might be some difficulty with the throat (as I had read of roup) I prepared a similar dilution in another dish, and with a feather bathed her throat and mouth.

This I did three times the first day, twice the second, and once the third, when she seemed quite well, but did not lay; in a few days the disease returned. Again I treated her as before, following it up for a week, which I should have done in the first place, so as to perfect the cure, and she has not been troubled since. On the first morning of her sickness I mixed with the usual morning feed of corn meal one-half teaspoonful of carbolic acid, and gave to the flock as a preventive.

My next case was a young cock. His trouble was confined mainly to the wattles, they being puffed out to their utmost expansion, apparently heavy, as the chicken's head drooped low. We opened the wattles and relieved the little sufferer of about one gill of dark, watery, bloody secretion, and then bathed the parts affected with carbolic acid prepared as above, and shut him from the other fowls, giving him water but no food till evening. The next morning he seemed as well as ever, and we could discover but a faint outline of our surgical operation. Both of these cases were taken so early in the disease that they were easily managed, hence the importance of our seeing our fowls every day.

My third and last case occurred a few days since. I had been confined to the house for several days with a cold, hence did not see my chicks. The first morning that I ventured out I found a small cock almost in the last stages of this disease; feathers rough, drooping wings, and dreadful eye. On examination, found the whole body highly feverish, very thin in flesh, as he evidently had been suffering some time; no inclination to eat or drink; the eye completely hidden by a thick, dark yellow rubbery matter, extremely offensive and attached to the iris. Over the pupil it was rather thin, not having hardened; but around the eye there was a hard rubbery ring, fully one-half inch thick one way by one-half inch the other; in order to remove this we had to make an opening below the eye. It all came out in a solid mass.

If I had possession of a proper instrument I would remove the eye entirely; the balance of the head, with mouth and throat, seemed free from affection. I then bathed every part of his head, neck and throat with carbolic acid dilution, shut him in a warm place from the other fowls. In about one hour he drank freely, which reduced the temperature of his body greatly. Knowing that he must have some nourishment to survive, I took off the soft part of a Graham gem, (preferring this to corn meal, because less heating), a piece the size of a walnut, and having put about two drops of carbolic acid (diluted so as to have it penetrate the bread) upon it, fed it to him in small pieces. He refused to eat, so I forced it down. I bathed his head several times through the day and gave him nourishment. Just at evening his appetite returned and he seemed ravenous.

The third day I followed up the treatment, and about noon let him out, and he seems to be doing nicely. I shall, however, continue the treatment until there are no lingering indications of difficulty. If I had seen him sooner, I think his eye might have been saved. I would like to know the name and cause of the disease.

I have written thus at length for the purpose of furnishing details, remembering how I have often wished, when reading articles of this character, that parties had been more minute, so that we need not work so blindly. M. L. B.

Sedgwick, Harvey Co., Kan.

HOW TO FATTEN CHICKENS.

WE clip the following on fattening fowls from the Boston Journal of Chemistry:—It is hopeless to attempt to fatten chickens while they are at liberty. They must be put in a proper coop; and this, like most other poultry appurtenances, need not be expensive. To fatten twelve fowls, a coop may be three feet long, eighteen inches high, and eighteen inches deep, made entirely of bars. No part solid—neither top, sides nor bottom. Discretion must be used, according to the size of chickens put up. They do not want room; indeed, the closer they are the better—provided they can all stand up at the same time. Care must be taken to put up such as have been accustomed to be together, or they will fight. If one is quarrelsome, it is better to remove it at once, as, like other bad examples, it soon finds imitators. A diseased chicken should not be put up.

The food should be ground oats; and may either be put up in a trough or on a flat board running along the front of the coop. It may be mixed with water or milk—the latter is the better. It should be well soaked, forming a pulp as loose as can be, provided it does not run off the board. They must be well fed three or four times a day—the first time as soon after daybreak as may be possible or convenient, and then at intervals of four hours. Each meal should be as much and no more than they can eat up clean. When they have done feeding, the board should be wiped, and some gravel may be spread. It causes them to feed and thrive.

After a fortnight of this treatment you will have good fat fowls. If, however, there are but five or six to be fatted they must not have as much room as though there were twelve. Nothing is easier than to allow them the proper space; as it is only necessary to have two or three pieces of wood to pass between the bars and form a partition. This may also serve when fowls are put up at different degrees of fatness. This requires attention, or fowls will not keep fat and healthy.

As soon as the fowl is sufficiently fatted, it must be killed; otherwise it will not get fatter, but will lose flesh. If fowls are intended for the market, of course they are or may be all fatted at once; but if for home consumption, it is better to put them up at such intervals as will suit the time when they will be required for the table.

When the time arrives for killing, whether they are meant for market or otherwise, they should be fasted without food or water for twelve or fifteen hours. This enables them to be kept for some time after being killed, even in hot weather.

The Garden.

STARTING EARLY POTATOES.

A CORRESPONDENT of the Cottage Gardener says:—To have a few early potatoes I have found the following system answer well. I plant my potato sets in pots, say about 5 or 6 inches in diameter; the soil I use is a pure turfy maiden loam and charred earth, with a little soot. Being in pots they can be started wherever there is a little heat. While they are coming on in the pots, leaves and a little manure are put up in a round heap to ferment, then put into a pit or frame; after the bed is in a fit condition of heat the surface is covered 8 inches deep with half-rotten leaves. When the heat is up the pots may be plunged in this material, and the plants kept in the same pots till the young tubers are the size of large peas or small marbles. This can easily be ascertained by turning them out of the pots. I consider the chief advantage derivable from this system is, that as they are confined in the pots, only a limited supply of nutriment is afforded, which causes the plants to tuber much sooner than would otherwise be the case. Whenever I find that the young potatoes are as large as I have stated I immediately take off the top soil the pots were plunged in. If I find the heat is deficient I add a little new warm manure to the inside of the bed, and turn it over. Then, having had some good, dry, turfy soil, and charred or burnt earth, with a mixture of a little soot, the bed is covered over to the depth of 14 or 15 inches; the Potato plants are next turned carefully out of their pots, and planted in a furrow in rows in the new soil after it has attained the natural warmth of the bed.

I never use any manure, but a little soil is put on the drills after the plants are established. By keeping them near the glass, and well aired at every favorable opportunity, a good crop of fine natural-flavored potatoes will be obtained.

NEW AND OLD PEAS.

MARKET gardeners care very little about the quality of peas, or in fact any other fruit or vegetable, so long as it is prolific and commands a good price in market. People who board at city hotels or boarding houses, or even depend upon the markets for a supply of green peas, never find even a passably good article, for the simple reason that first-class sorts are seldom, if ever, cultivated for market. The first and greatest objection which the market gardener urges against the choice sorts, is the price of seed; and we cannot blame them, inasmuch as not one person in twenty knows enough about peas to distinguish one variety from another, as they are offered in market; and it is doubtful if the best sort known would command five cents per bushel more than the very poorest; consequently, at present, there is very little encouragement for introducing or cultivating the best flavored varieties for market purposes. In a commercial point of view, earliness is a great merit, for the strife among growers is to see who shall have the first peas in market, and those who win are usually well paid for their efforts, although the consumer gets a poor return for his money.

The Early Kent, Dan. O'Rourke and Dillistone's Early, may answer to be called peas; but they are a poor substitute for a good article.

The amateur and others who cultivate peas for their own tables soon learn to discriminate between varieties, and it is only within the past half-dozen years that we had an extra early variety of first-rate quality; and even now there are few that can be said to equal the later sorts. McLean's Little Gem, and McLean's Advancer, are certainly fine very early sorts, both being of the wrinkled marrow type. The wrinkled surface of the pea, when ripe, is, by the way, as good sign of sweetness when green, in peas, as it is in corn, and the difference is as great between smooth and wrinkled sorts as between common field corn and sweet corn. But it must not be supposed that there is not a great difference in the quality of the wrinkled sorts, the same as found in our best varieties of sweet corn.

For many years the Champion of England has had no equal among the late sorts of wrinkled peas; and we are somewhat in doubt as to whether it has a successful competitor among the many novelties lately introduced; but were we to believe the annual announcement of new superior sorts made in English magazines, this old favorite must have been many times superseded during the last dozen years, although we have found none that suited us better, considering all its merits.

The late Dr. McLEAN of Colchester, England, created quite a sensation a few years since by raising several new varieties of merit; but a Mr. LAXTON is now commanding the attention of the English people by

FIGURE 2.

his feats in successfully crossing the best sorts, the results of which are said to be somewhat marvelous, even to those who are accustomed to have the best sorts under cultivation. Our seedsmen's catalogues have been giving LAXTON'S peas a pretty wide notoriety for the past two or three years, and, from present appearances, are likely to continue in the same line, judging from late announcements of new sorts. Two more new varieties of Mr. LAXTON'S have lately been noticed, namely, Laxton's Harbinger and Laxton's Superlative. The first is said to be the earliest variety known, it being a cross between Laxton's Alpha and Dillistone's Early. The pods are about 2½ inches long, full, plump and rounded with a slight curve, as shown in figure 1. Laxton's Superlative is claimed to be the largest of all peas, and is a cross between the Ne Plus Ultra and a hybrid Supreme. It is a robust grower, the vines often reaching seven or eight feet high. The pods are very large, as shown in figure 2. This variety is later than the Harbinger, but considered very valuable. Both of these new sorts were awarded a first-class certificate by the Fruit Committee of the Royal Horticultural Society.

GARDENERS' NOTES.

A Good Way to Keep Cabbage.—Select a dry place in your garden, or near the house; dig a hole two feet deep and place a barrel or box in it; put some small sticks in the bottom of the box or barrel, with some dry straw over them; then after cutting off the roots, and some of the outside leaves from your cabbage, place them in the barrel in layers, with some dry straw or hay between each layer, covering it with a board, or large flat stone; now bank the earth to the top of the barrel, and dig a drain to conduct away the surface water. I have tried a great many different ways to keep cabbage through the winter, but never found any better way than the above, as you can get it at any time, no matter how hard the ground is frozen.—LEXINGTON, *Rochester, N. Y.*,

Double Crop of Cauliflower from One Plant.—To get a second crop of Cauliflower from your plants, a writer in the London Field says, simply cut the cauliflower with the usual complement of overlapping leaves; leave all the other leaves on the stem for a week or two. Go over them, and choose from two to four of the best placed and strongest; three to each is a capital average. Remove or bend down any leaves that interfere with these advancing growths, and also any decaying or old worn-out leaves; allow all others to remain. Give the stems several good soakings of manure water, and a layer of dung, if thought desirable; and in an amazingly short period of time another crop, perhaps as heavy—or heavier in the gross—as the first, may be cut from the old stalks.

Pomological.

POMOLOGICAL GOSSIP.

The Red Hawthornden Apple, is a fruit that has had quite a local reputation and is attracting general attention in England. An English journal describes it as follows:—The fruit is large and oblate, with four very obtuse angles on the sides. The crown is flat and there is only a slight depression in which the eye is placed, skin smooth, greenish-yellow, with red blush next the sun, eye small and closed, set in a shallow depression. Stalk very short, set in a deep cavity. Flesh white, tender and juicy, with sprightly and agreeable acidity. Season, end of August, and beginning of September. It is an excellent grower as a standard, or trained, but not so suitable as a pyramid.

"Green" Newtown Pippin.—In the RURAL NEW-YORKER, Nov. 16, I saw an article from CHARLES DOWNING stating that there is a Green Newtown Pippin. I think Mr. DOWNING is mistaken, and I think he will find it out so, too. He has evidently got some other kind of an apple, and calls it Newtown Pippin. I have raised Newtown Pippins several years, and have never come across but one kind; and that sort is always green until it begins to ripen, when it turns yellow. I beg Mr. DOWNING'S pardon for disputing him; but as I have made Newtown Pippins a specialty, I think I know something about it.—A. B.

The Ida Strawberry.—Prof. MATTHEWS, of the Iowa Agricultural College, in the Iowa Homestead, highly recommends this strawberry, after eight years trial, as being very hardy and productive. The fruit he pronounces good; not as large as Willson's Albany, but very handsome. In an experiment at the College, it stood unusual exposure last Winter, better than

FIGURE 1.

any other variety. Its only drawback is that it requires some staminate variety to be planted near it, as it is a pistillate variety.

CUTTINGS OF CURRANTS, etc., may be set as long as the ground is open and friable.

Scientific and Useful.

THE FIRST AMERICAN CENT.

IN the RURAL NEW-YORKER of Oct. 26 I notice an inquiry from CHARLES H. WILSON in regard to numismatics. In reply, would say that the first American cent was struck in 1791, and the following year, 1792, another and much larger one was struck. These were called the "Washington Cents," and are extremely rare, there being but about 200 of them struck before the dies were broken. In 1793 commenced the first of the regular coinage, and of this date there are several different dies. From this date to 1799 the coinage continued regularly, at which time it was discontinued until 1800, when it was again commenced, and continued without intermission to the present time. Thus, 1799 is the only year in which the American cent was not coined.

The last year in which the large copper cent was coined was 1857, of which date there are two different dies, beside the nickel cent, which was first circulated in that year, although the first nickel cents were struck in 1856; but they were only experimental, and consequently rare.

T. S.

THE TELEGRAPHIC EAR.

THE Hartford Post says that one of the most remarkable illustrations of the power which a telegraphic operator acquires to distinguish individuals by their touch upon the instrument has just been afforded by Mr. Homstead, one of the operators in the Western Union Telegraph Company's office in this city. About a fortnight ago, Mike W. Sherman, formerly an expert and well-known telegraph operator, escaped from the Middleton Insane Asylum, where he has been confined, and, though thorough search has been made for him, he successfully eluded the people who were on his track until Monday night. While Hemstead was at work in the office in Hartford that night, he suddenly recognized, among the clatter of a score of messages passing over the wire, a sound which he at once declared was the touch of the missing Mike. It proved to be a message from Wallingford, and an investigation showed that Mr. Hemstead was quite right in ascribing it to the insane man, who was found there the next day, he having dropped into the office in the former place on Monday night, and taken a hand at his old business.

The Apiarian.

BEES AND FRUCTIFICATION.

I AM a bee keeper, and make my living partly by raising and grinding buckwheat; so, you see, I am much interested in the question broached by "ANTI-BEE KEEPER," in RURAL NEW-YORKER, Oct. 5. I have examined very closely; have seen my buckwheat fairly covered with bees, and thought at first they must injure it, but have come to the conclusion they do not.

There are two kinds of flowers growing on the buckwheat plant. They grow close together, although one usually grows on the upper side of the branch, and the other on the lower side. One produces honey and pollen, the other buckwheat. The one that produces honey never produces buckwheat. The other flower produces only buckwheat. The berry is formed before the flower opens; as the kernel swells the flower opens; bees do not meddle with it; it has nothing for them—no honey, no pollen. Let Anti-Bee Keepers keep bees, and tell their little ones, if they have any, that the Great Father is very kind and good, and meant they should have honey with their cakes.

D.

New Baltimore, N. Y.

BEE NOTES AND QUERIES.

Forage Plants for Bees.—I am going to keep bees—have a few swarms to which I am going to add others and make it a business. I should like to know what flowering plants—not trees—I should cultivate in order to get adequate pasture for them the coming season. Can any of your correspondents tell me what annuals to sow next Spring with a view of promoting the manufacture of honey? If so, they will oblige—A. TYRO.

WILL some of our experienced bee culturists answer the above, giving facts and suggestions.—[ED.

The Swine-Yard.

NATIONAL SWINE BREEDERS' CONVENTION.

An adjourned meeting of the National Swine Breeders' Convention, held in New York in May last, convened, according to previous call, in the rooms of the Indiana State Board of Agriculture, at Indianapolis, on Wednesday, Nov. 20, 1872, and was organized by the election of Dr. A. C. Stephenson of Greencastle, Ind., as President, and Geo. W. Rust of Chicago, as Secretary. The following gentlemen in attendance were enrolled as delegates:

New York.—Col. F. D. Curtis, Saratoga County.

Pennsylvania.—Thomas Wood, Chester County.

Ohio.—John M. Millikin, Hamilton; S. D. Harris, Cleveland; M. H. Cryer, Salem; James Marshall, Middletown; D. R. Groom, Groveport.

Indiana.—R. Baldridge, Hagerstown; John Worrell, Jr., Clayton; Job Rogers, Clayton; E. Carson, Valley Mills; J. J. Milhouse, Valley Mills; R. P. Kimberlin, Tipton; W. O. Reveal, Clermont; J. W. Armstrong, E. J. Armstrong, Fielding Beeler, J. G. Kingsbury, and J. W. Billingsley, Indianapolis; W. W. Thrasher, Groves; A. D. Hamrick, Hamrick's Station; O. P. Cobb, Aurora; James Riley, Thorntown; Calvin Fletcher, Spencer; John W. Brand, Thorntown; Jacob Kennedy, New Elizabeth; A. B. Claypool, Connersville; E. Mills, Noblesville; W. M. Moore, Covington; J. N. Parker, Thorntown; S. F. Pentecost, Zionsville; J. B. Gilbert, Lewisville; H. Satterthwaite, Martinsvile; E. Hollingsworth, Tippecanoe Co.; T. V. Mitchell, New Salem; R. L. Philips, Franklin; Wm. P. Long, Clermont.

Illinois.—W. P. Sisson, Galesburg; A. C. Moore, Canton; L. T. Clark, Onarga; Geo. W. Rust, Chicago; H. D. Emery, Chicago.

Iowa.—Dr. Geo. Sprague, Desmoines; Prof. Geo. W. Jones and J. P. Roberts, State Agricultural College.

Missouri.—W. B. Stone, Kansas City.

Kansas.—S. W. Pearson, Lawrence.

On a call for reports from committees, it was found that but few of the regular appointees were present. Several of the absentees had sent in written reports, and the balance was provided for from among the delegates present.

A report on Chester Whites was presented from Thomas Wood, summing up in the following principal points:—Short head, broad between the eyes; ears thin, projecting forward, and lopped at the point; neck short and thick, jowl large; body lengthy and deep, broad on the back; hams full and deep; legs short and well set under for bearing the weight; coating thinnish, white, straight; small tail and no bristles.

On Magic, or Poland China, the Committee was divided; Mr. Baldridge of Indiana on one side, and Mr. Millikin of Butler Co., Ohio, on the other, very widely apart in their history of the origin of this breed. Mr. Millikin, who had always lived in the neighborhood where these hogs originated, contended the name Poland-China is a misnomer, as there is no Poland blood in them.

Mr. Cryer made a lengthy report on Lancashire swine, contending earnestly for the superiority of this breed in the class of small hogs.

Mr. Cobb presented a report on Yorkshires, in which he argued strongly in favor of this breed as of the size and style most desirable for family and packer's use—hardy, vigorous, prolific, quiet, and readily fattened at any age.

A report on Essex swine thus describes the breed:—They are small to medium in size; color black; face short and dishing; ears small, soft and erect while young, but coming down somewhat as they get age; carcass long, broad, straight and deep; ham heavy; bone fine; hair ordinarily rather thin; fattening qualities very superior; as breeders, very prolific and fair nurses.

A. B. Allen of New York sent a report on Berkshire swine, with these cardinal points:—A fine snout, slightly dished face; jowls moderately full; eyes bright and rather large; ears slender, rounding to a point, erect and playful; hams and shoulders full; back broad and slightly crowning; the body round, full, deep, well ribbed up and rangy; legs standing rather wide apart and well under the body, moderate as to length, with small, tough feet; tail slender, handsomely curled, and with full brush; bristles are objectionable; hair should be soft; the skin thin; flesh firm and elastic under the touch of the fingers.

A report on Victoria swine was sent in from Charles E. Leland of New York, in which he sums up these points:—These swine are white; hair soft; head thin; ears erect; legs short and fine; back broad, straight and level; body long; hams round, swelling and high; tail fine and free from wrinkle and roll; skin thin, soft and elastic; flesh fine-grained and firm; pigs keep easily and can be fitted for slaughter at any age.

From the report on Cheshire, or Jefferson county swine of New York, we quote: These hogs originated in Jefferson county, New York. They are pure white, with very thin skin of pink color, with little hair. The snout is often long, but very slender and fine; the jowls are plump, and the ears erect, fine and thin; the shoulders are wide and the hams full; the flesh is fine-grained. They are recommended on account of the extra amount of mess pork in proportion to the amount of offal.

In the report on Neapolitan swine it is claimed that the breed is hardy, vivacious, and apt to fatten on a small amount of feed; bones fine and small; they are banded and spotted with ashy-white or slate-blue in color; the flesh highly palatable, resembling that of the chicken.

Reports were read concerning other leading and well known breeds of hogs, made up for the most part of extracts from Youatt and Sidney.

Mr. Fletcher said that it is the duty of this Convention to agree upon and recommend a general standard of excellence for a hog which shall best meet the requirements of the market.

A general discussion followed, in which it was shown to be important to the farmers, shippers and packers to know what kind of a hog was most desirable to be grown, what size is most salable and in largest demand, a general standard, and a correct scale of points is demanded and expected from this Convention.

Mr. Thrasher thought if we established a scale of points it would supersede the necessity for this resolution.

Dr. Stevenson explained the difference between making a scale of points of hogs in each breed and the kind of hogs most desirable for breeding.

Mr. Moore of Illinois, said that different buyers had different ideas about the kind of hogs required for their use. He thought it would be unwise to make a fixed standard of characteristics.

Mr. Armstrong said that at different times and seasons the packers called for hogs of different sizes. At one time the demand will be for the largest kinds, and again it will be just as strong for small and medium sizes, owing to the use or purpose required, whether for lard or for packing.

A committee, consisting of Messrs. Thrasher, Cobb and Baldridge, was appointed to report on "What is the most profitable hog for the raiser, packer and consumer?" which reported as follows:

The hog must have a small, short head, heavy jowl and thick, short neck; ear small and thin, and tolerably erect; not objectionable if it droops slightly forward; must be straight from neck back to flank; must let well down to the knees in brisket; of good length from head to tail; broad on the back; ribs rather barrel-shaped; must be slightly rounded and curved in the back from shoulder to the setting on of the tail; tail small; long in the ham from hock to letting off at loin; shoulder not too large; only large enough to give symmetry to animal; ham broad and full; hair smooth and evenly set on; skin soft and elastic to the touch; legs short and small and well set under, broad between the legs, good depth between bottom and top of the hog, pleasant, quiet disposition; should not weigh as a general rule, more than three or four hundred pounds gross, at twelve to eighteen months old, according to keep; color may be black or white, or a mixture of the two. The hog should measure as many feet from top of head to setting on of tail as he does around the body, and as many inches round the leg below the knee as he does feet in length or around the body, and the depth of body will be four-fifths of his hight.

A committee consisting of Messrs. Roberts, Sprague and Curtis, was appointed to consider the question—"What constitutes thoroughbred Swine?" and this is what they reported:—In the absence of any system of records by which pedigrees of swine are kept, your committee can only give an expression which must, from the nature of the case, be somewhat general. Only such breeds should rank as thoroughbred which are recognized in authentic history as of sufficient remote origin when bred in a line, to result in the establishment of a fixed type, capable of duplicating themselves with uniformity. Your committee would recommend that the leading breeders of pure bred swine form breeders' clubs for the purpose of establishing a herd registry after the plan adopted by breeders of thoroughbred cattle, in order to secure greater uniformity and to perfect as soon as possible the various breeds.

A committee which had been appointed to present a classification of the different breeds and varieties of swine, as a suggestion to managers of stock exhibitions in making up their prize lists, submitted the following, making six classes:—1, Berkshire; 2, Poland-China; 3, Large White Breeds; 4, Small White Breeds; 5, Small Black Breeds; 6, Crossers, and all breeds not eligible to compete in any of the above classes.

A committee consisting of Messrs. Curtis, Sprague and Stone was appointed to make out a general scale of points applicable to all breeds of swine, by which judges at our exhibitions might be guided in making their awards. The Committee reported the following:

Scale, 100 points—Perfection. Back, 10; Long Ribs, 8; Short Ribs, 7; Shoulder, 8; Ham, 12; Length of Body, 6; Flank, 6; Twist, 6; Snout, 4; Jowl, 3; Face, 3; Ear, 2; Neck, 4; Belly, 4; Skin, 5; Hair, 3; Bone, 3; Legs, 3; Feet, 2; Tail, 1.

Mr. Curtis stated that it was the intention and design of the New York Convention to make the decisions of this Convention authoritative and final in reference to the points and characteristics of the breeds of swine reported upon. In this view of the matter the Convention assumes great importance, and renders it necessary that great care should be taken in the reports and resolutions.

The following gentlemen were appointed a Standing Committee to call a National Convention of Swine Breeders in five years from this time, or sooner if they deem it expedient, viz:—Col. F. D. Curtis of New York, John M. Millikin of Ohio, Charles Lowder of Indiana, A. C. Moore of Illinois, and I. P. Roberts of Iowa.

A cash collection was taken up to defray the expense of publishing a pamphlet edition of the transactions of the Convention, copies of which are to be distributed among the contributors according to amounts paid. Geo. W. Rust and Henry D. Emery were appointed to execute the above work.

S. D. H.

Domestic Economy.

ECONOMY OF HIRED GIRLS.

Is it not enough that farmers' wives are over-worked and over-burdened with cares that they are very often unable to bear, without being blamed for it as well? I could almost wish that some of those well meaning, but mistaken people, who are continually exhorting over-worked wives and mothers, to hire a girl, a "stout armed servant" had some such a trial as many of the servants are that farmers' wives are obliged to put up with in most cases. Perhaps it is not generally known, that those few girls who are willing to do housework for a living, are so opposed to living in the country, that they will not go into it unless it be they cannot get a place in town; consequently the few that do go, are the very worst of their class. How then can the weary, spiritless woman, obtain any real help from one of an overbearing, insolent, ignorant clan?

To show that I know whereof I speak, I will give an instance where an over-worked mother of a large family, knowing that she was working beyond her strength, sought to obtain help, fearful that overtaxed nature would give away, and leave her darlings motherless. A girl was hired, who it was soon found made more work than she accomplished; and what she did do was done very poorly. After a few weeks of domineering over the children, setting every thing awry, she was discharged. Was that the end of the matter? Alas, no! She had infested the children with a loathsome skin disease, that was more terrible to their mother than any hard work could be. It would be impossible to describe the suffering and trials caused by it, to say nothing of the expense, which was no small amount; but after months of vain endeavor to cure it, she happily thought to apply to her dear old friend, the Rural New-Yorker. She wrote, and directly received a receipt that cured it up in very short time. Is it any wonder that she almost vowed she never would have another hired girl? But she did, with as poor success in regard to work, as before. What after? Well, to be plain, bed vermin!

Let any tidy housekeeper imagine the trials of a woman already over-burdened with care, in poor health, and, withal, a horror of such filth, and she can judge what a benefit her help was to her! After a great deal of hard work, she banished the pests, (both the girl and the bed bugs). Two years passed during which time she did her own work, until the early part of the present fall when she was induced to hire a girl for a few weeks, one who had the name of being one of the best of her class. "Now," thought this sorely tried lady, "I will have some good help, and will get everything nicely fixed for winter." The men folks had been in the habit of doing all the heavy lifting; but now they said, "you have a good strong girl to help you; you can get along without any help from us." There was milk to be carried out of the cellar, churning to do, water to be got ready for washing, with much other hard work.

"Kate will you help me with some of this hard work?"

"No ma'am; I never do such hard work. It is enough for me to see how you are broken down. I shall never do anything to break myself down so."

Nobody else would do it; the work must be done, the mother did it herself; the consequence, a strained back, causing a permanent weakness of the spine, from which she can never recover.

I fear I have already made this too long. My excuse is that I felt so strongly on this subject, I could not forbear having "my say" about it. Perhaps this case, every word of which is true, (the half not being told) is an exception; but I am inclined to think it the rule, having seen many others quite as bad. It is my opinion that farmers' wives would do better to use the money paid to a girl, in making their houses convenient and comfortable and hiring their sewing done out of the house, always having their clothing plainly made. A. B.

ODDS AND ENDS.

Fastening Shells.—Please tell "Gastorpod" that the way I fasten shells (or anything else) on frames or boxes, is this: I take whiting, linseed oil and dry chrome green, and make a putty of a color to suit; pound it with a hammer until there are no streaks of green or white in it; have it just thick enough so it will not run; then spread it smoothly over one side of the frames a little less than one-eighth of an inch thick; put on the things, and then spread putty on another side; when the frame is dry, varnish it; and when thoroughly dry it will be as solid as any one could ask for.—Nell.

To Remove Stains of Iron Mold.—A writer in the Chemical News advises, as the best method of removing stains of iron mold from fabrics, that the mark be first wet with yellow sulphide of ammonia, by which it will be immediately blackened. After allowing it a minute or two to penetrate, the excess of sulphide is to be washed out, and the black spot treated with cold diluted chlorohydric acid, by which it is at once removed. Finally, wash well with water. This method is said to avoid the serious objection of weakening the fiber.

For Vinegar.—If you have no cider to make vinegar, you can keep yourself very well supplied by saving your apple parings; you can put them in a crock, with a little water on them, so they will not dry up, and when full stew them and press like jelly; rinse the pulp from the jelly, and put in a keg with a few white beans, and vinegar will result in a short time. A pint of white beans in a barrel of cider will bring it to vinegar in a short time if in a moderately warm place.—John North, *Washington Co., N. Y.*

To Make Apple Butter.—Take one gallon of cider; boil down to half the quantity; pare the apples and cut them fine: put the apples in the cider in small quantities, and boil until soft, adding apples enough to fill the kettle; boil and stir constantly until thoroughly done—from an hour to an hour and a-half; be careful and not let it burn; spice with ground cinnamon and cloves, or any spices to suit the taste.

Floricultural.

IS IT DOUBLE CONVOLVULUS?

LAST Spring a friend had a quantity of flower seeds given her. She sowed them, and among the rest were Convolvulus Major. About four feet from them there came up one that grew more thrifty than the rest, the leaves a shade lighter green; but otherwise it looked like the Convolvulus. When it blossomed, however, the flowers were as double as a Petunia and grew in clusters of from four to six. It bore no seeds. Is this something new? Is there such a flower as the Convolvulus Major, double?—MRS. MARTHA E. ROGERS, *Cabell Co., West Virginia.*

IT is very seldom that the Convolvulus produce double flowers, and we should have been pleased if you had sent us a flower and cutting. The double sorts produce no seeds and must be propagated by cuttings. It is possible that your double Convolvulus is only the old *Calystegia pubescens*, from China, which is now quite common in gardens all over the country. It has also run wild in some localities. The flowers are very double, irregular in form, a pale pink or rose color. The roots are very small and quite hardy; therefore you can readily tell by examining the soil where the plant named was growing. Whenever our readers find novelties or other plants in their gardens of which they would like to know more, we will be pleased to receive specimens of both flowers and leaves.

FLORICULTURAL NOTES.

Forcing Lily of the Valley.—The Cottage Gardener gives the following mode: The best way is to take up the roots carefully, those with plump, round crowns, and place them in pans or boxes, filling in the interstices with rich, turfy loam made fine. Place them on a bed of leaves or dung with a bottom heat of 65°, let them remain there a fortnight or three weeks, then put on the lights of the frame, keep covered with mats, until the flower-stems are an inch above the soil with their lower flower-buds, then expose them fully to light, and the leaves will soon become green, and the flowers expand. The temperature of the frame should range from 55° to 65°. After the turn of the year bottom heat is not essential. We place our roots on the wooden stage that rests with the laths on the pipes, so that the plants in the pans and boxes receive some warmth. The temperature is 55° to 60°, 70° or more by day with sun heat and plenty of air. When the first flowers open they are placed in a house with a temperature of 45° to 50°. We force about a dozen pans or boxes of this lovely flower fortnightly, from November to April.

Floral and Vegetable essences for Perfume.—Nearly all the essences employed in perfumery are of European production; and yet there are men in obscure places in the United States who have made modest fortunes producing these essences. It will come to pass that we shall pay more attention to such productions when we learn that there is profit in something else beside vegetables fruits, and grains. This is the way the manufacture of these essences are distributed in Europe:—England produces lavender and peppermint largely. At Nismes attention is given to rosemary, thyme and lavender. Nice makes violet its specialty. Cannes extracts the essences of the rose, the yellow acacia, the jasmine, and neroli. Sicily furnishes citron and orange; Italy, iris and bergamot.

Stone Coal and Roses.—A writer in the *Revue Horticole* states that he purchased a very fine rosebush, full of buds, and, after anxiously awaiting their maturing, was greatly disappointed when this took place to find the flowers small, insignificant in appearance and of a dull, faded color. Incited by the suggestion of a friend, he then tried the experiment of filling in the top of the pot around the bush to the depth of half an inch with finely pulverized stone coal. In the course of a few days he was astonished at seeing the roses assume a beautiful red hue, as brilliant and lively as he could desire.

Floral Hypocrisy.—A lady amuses herself with developing the polite hypocrisy of society in this charming way:—She has an Orange plant in her parlor which bears neither bud nor blossom, but she has had two full-blown flowers and a half-opened bud of wax placed upon the barren stalk. Her callers all admire the sweet perfume of the lovely flowers, and the gentlemen have noticed that the bud has expanded considerably since they called before.

Crocus Cilicicus is a native of Asia Minor, and is called one of the prettiest of Autumnal crocuses. In color it resembles *Speciosus*, with smaller flowers and narrower petals.

Industrial Societies.

INDUSTRIAL SOCIETIES.

The Sampson Co., N. C., Ag. Soc. holds a Fair at Clinton the first week in December. Prof. KERR delivers the annual address.

Shelby Co., Mo., Ag. Soc.—Officers elect for 1873: *Pres.*—J. M. ENNIS. *Vice-Pres.*—F. M. Harris. *Sec.* B. F. Dobbins. *Treas.*—J. C. Hale. *Directors*—Wm. Caldwell, Wm. D. Gardner, B. Grogg, Louis Hale, John T. Cooper, D. A. Ronner, C. L. Spicer, Paschal Davis, T. W. Sheetz.

The Claremont, N. H., Ag. and Mech. Soc. recently elected the following officers for the ensuing year: *Pres.*—CHAS. H. LONG. *Vice-Pres'ts*—John Blanchard, Enoch Johnson, H. P. Shedd, L. B. Judkins, Lucian Jones, Henry Colby, Bela Chapin, Abram Rogers, Augustus Barrett, C. L. Thomas, Sylvester Bartlett, Robt. Bunnell, J. W. Chaffin, S. H. Andrews, Algernon Willis, Jno. F. Jones, Sylvester Glidden, R. H. Ellis, Geo. C. Grannis. *Sec.*—Arthur Cinse. *Treas.*—Geo. H. Stowell. *Board of Managers*—Dudley T. Chase, Geo. P. Rossiter, F. P. Smith, H. W. Parker, S. G. Jarvis.

Vermont State Ag. Soc. and Wool Growers' Ass'n.—At a recent meeting the following officers were elected: *Pres.* HENRY G. ROOT, Bennington. *Vice-Pres'ts*—Henry S. Morse, Shelburn; Wm. R. Sanford, Orwell; Crosby Miller, Pomfret; Henry Chase, Lyndon. *Treas.*—Noah B. Safford, White River Junction. *Sec.*—Henry Clark, Rutland. *Directors*—John Gregory, Northfield; Elijah Cleveland, Coventry; Geo. Campbell, Westminster West; Henry Hayward, Rutland; Henry B. Kent, Dorset; Lawrence Brainard, St. Albans; David Goodell, Brattleboro; Edwin S. Stowell, Cornwall; Jas. A. Shedd, Burlington; Geo. A. Merrill, Rutland; C. Horace Hubbard, Springfield; Silas G. Holyoke, St. Albans; Lemuel S. Drew, Burlington; Geo. Hammond, Middlebury; Harley M. Hall, East Burke; Geo. W. Hendee, Morrisville.

North American Bee Keepers' Association.—The next session of this Society will be held in Indianapolis, Dec. 4th, 5th and 6th, next. Prominent apiarians (including several ladies) from all parts of the country will be present to give energy and interest to the proceedings. The following roads will return all persons free who have paid full fare one way:—I. B. & W. R. R., from Peoria to Indianapolis.; Ft. W. M. & C. R. R., from Ft. Wayne to Connersville—purchase round trip tickets at all stations; C. & I. R. R., from Cincinnati to Indianapolis—round trip tickets sold at all stations; I. C. & L. from Cin. to Lafayette—round trip tickets at Lawrenceburg, Greensburg, Shelbyville, Thorntown, Colfax, Lafayette, Lebanon and Zionsville; C. C. C. & I. R. R., from Cleveland to Indianapolis, and I. & St. L. R. R., from St. Louis to Indianapolis (same line)—one-fifth fare returning; St. L. V. T. H. I. R. R., another line from St. Louis to Indianapolis—one-fifth fare returning. The Porter House, Revere House and Palmer House, in Indianapolis, will board members at reduced rates.

National Association of Manufacturers of Agricultural Implements.—A meeting of this organization was held at Cleveland, O., Oct. 15 and 16, 1872. The avowed object of this Association is to promote a friendly interchange of views among manufacturers and thus inspire greater confidence in each other, with a view to the adoption of such measures as may be for their mutual benefit and protection, as well as for the joint interest of dealers and farmers. Action is foreshadowed looking to selling machinery for cash or on shorter credits; the employment of reliable attorneys for the collection of claims in the several States; the compilation of the Usury, Homestead and Collection laws of each State for distribution to members; the compilation of statistics showing the number and value of implements produced, sold and consumed from year to year and of farm products grown, consumed and shipped in each State and county of the Union. Another meeting is to be held at Cleveland, Jan. 14, 1873. The Corresponding Secretary of this organization is E. S. HOLLOWAY, Columbiana, O.

The Northwestern Dairymen's Association meets at Whitewater, Wis., January 21-23, 1873. The following topics are announced for discussion:

Dairying in the Northwest.—Have we Requisite Climate and Soil for Successful dairying?

The Dairy Farm.—Arrangement, Buildings, Crops. Should it be Exclusively Devoted to Dairy Products?

The Dairy Cow.—Breeds, Feeding and General Management.

Milk.—Milking and Care of Milk before Leaving the Farm,

Butter.—Methods of Manufacture, including Care of Milk, Churning, Salting, Packing.

Cheese.—Methods of Manufacture; especially as to Management of Tainted Milk; Best Size for and Modes of Curing Cheese.

Marketing Dairy Products.—Time, Place, Manner, with Reports from Dairy Boards of Trade, and Papers from Dealers, Eastern and Western.

The Association asks the dairymen of Illinois, Iowa, Wisconsin and Minnesota to send to the Secretary—G. E. MORROW, Madison, Wis.—answers to the following questions:—1. Name and location of factory or Dairy. 2. How much butter, cheese or milk was produced in 1871? Other facts are highly important and will gladly be received. 3. Number of cows. 4. Length of season. 5. Number of pounds (or gallons) of milk. 6. Where was product sold? 7. Average price, net. Where the dairy product is a part of that produced by a factory this should be stated. Reports are desired from those furnishing milk to cities or towns, butter makers, etc., as well as from the cheese makers. Reports should be made by January 1, 1873. Blank forms for the report will be furnished, or they may be sent in writing. To any one sending such a report will be sent, free of charge, so long as the supply lasts, a pamphlet of 100 pages containing the Report of the Association for last year, the addresses and discussions at the annual meeting, etc.

"GOOD PAY FOR DOING GOOD!"

LIBERAL PREMIUMS TO CLUB AGENTS!

MOORE'S RURAL STILL AHEAD

In Liberality to both Agents and Subscribers!

READ, LEARN AND ACT!

THE RURAL NEW-YORKER'S Agent-Friends, and everybody disposed to become such, all over the Continent, will please note the following announcement of UNPRECEDENTED PREMIUMS for both Club Agents and Subscribers:

Observe, firstly, that we give every Yearly Subscriber who pays $2.50 a Splendid STEEL-PLATE ENGRAVING. This *Grand Premium* is sent to every person paying $2.50 for the RURAL one year—so that each subscriber at that price really gets $7.50 for only $2.50! Note, particularly, that the offer will enable you to raise a Club with much greater ease and facility than ever before.

Note, secondly, the annexed list of VERY LIBERAL PREMIUMS offered those who form Clubs for 1873, or for one year from any date. See the Names and Prices of Articles, and the small number of Subscribers required to secure a Valuable Premium. Almost any one located in a locality where live, reading people reside, can, by a little timely effort, secure a Premium worth from $5 to $200. *Now is the Best Time to Start Clubs*, for now that the Presidential Campaign is over everybody will want such a good, useful and popular paper as MOORE'S RURAL.

Remember, thirdly, that every article we offer as a Premium is *First-Class and Genuine*—that we put each at lowest retail price, and that the names of manufacturers or dealers (given in most cases) is a guarantee of good quality, etc. Note, also, that all Club Subscribers—whether at $2 for the paper only, or $2.50 for Paper and Engraving—can be counted by Agents for Premiums.

The Table below specifies the Cash Price of each article offered as a Premium, and the number of subscribers required to secure it at $2, (our lowest club rate)—or at $2.50 with our Premium Engraving. Note that the Premiums are offered *without any condition as to whether the clubs are composed of new or old subscribers.* Canada subscribers must add 20 cents per yearly copy for postage.

SPECIFIC PREMIUMS,

TERMS, &c. FOR MOORE'S RURAL NEW-YORKER FOR 1873.

OPEN TO EVERYBODY.

	Cash Price of Premium.	No. of Subscribers at $2, or $2.50 with Engraving.

SATURDAY, DEC. 7, 1872.

DEATH OF HORACE GREELEY.

A GREAT AND GOOD MAN GONE!

HORACE GREELEY IS DEAD, and a Nation mourns the loss of its greatest Journalist, Philanthropist and Humanitarian! The Tribune of the People—the friend and protector of the poor and oppressed of every race and color—has gone to his reward. Though so lately defeated as a candidate for the highest office in the gift of the American People, no death has occurred during the past twenty-five years that created so much sadness and mourning among the masses as has this seemingly sudden and untimely event. Not within that period have the people of the whole country been so shocked and affected as by the announcement of the demise of HORACE GREELEY, (except by the assassination of President LINCOLN.) Never have we known, during thirty years' experience as a Journalist, such tributes paid to the character, career and memory of any private citizen as are now emanating from People, Press and Pulpit over the whole Continent, to the goodness, virtues and talents of the justly distinguished deceased. Such poems of praise—such tributes of respect and expressions of regret and sorrow and sadness—are indeed rare, and show a wide knowledge and appreciation of the high character, purity and ability of the greatest of American Journalists.

HORACE GREELEY departed this life at ten minutes before seven o'clock on Friday evening, November 29—just four weeks from the day his wife was buried—at the residence of Dr. CHOATE, (a few miles from deceased's late homestead in Chappaqua, Westchester county,) aged 61 years and 9 months. His disease was nervous prostration, resulting in an affection of the brain. Of the causes of his illness and death the Tribune says:

"For some time past his health had been seriously impaired, but not to so great a degree as to awaken the apprehension of his friends. His labors during the Presidential canvass had been of a character to tax his intellectual and physical energies to the utmost. The blended wisdom and ability which he exhibited on this occasion elicited admiration even from his opponents. Abstaining, to an extent that is rarely witnessed during a warmly contested election, from personal criticisms, he devoted himself to lucid expositions of the questions at issue, and the earnest advocacy of measures which he deemed of pregnant import to the peace and welfare of the country. But such a protracted tension of the faculties was too severe a strain for almost any human constitution. Long before the close of the contest, the issue of which caused him no disappointment, his watchful friends observed certain unusual symptoms of fatigue and languor. They were sufficient, perhaps, to suggest anxiety, but certainly not to produce alarm. The effects of political defeat were soon absorbed in the intensity of private sorrow. The long-continued illness of Mrs. Greeley terminated in her death a short time before the election. For many days and nights her husband did not leave her sick chamber, except at short intervals. The sight of her sufferings exercised a painful influence on his nervous system. Night after night, he was necessarily deprived of sleep, but when the opportunity for rest was restored, he was unable to make use of it. His incessant watch around the dying pillow of his wife had well-nigh destroyed the power of sleep. Symptoms of extreme nervous prostration gradually became apparent, his appetite was gone, the stomach rejected food, the free use of his faculties was disturbed and he sank, with a rapidity that even to those who watched him closest, seemed startling."

Mr. GREELEY'S last words were:—"I know that my Redeemer liveth. It is done." His remains were brought to New York City on the 30th ult., and on the 2d inst. they were placed where the public could view them. His funeral took place from Dr. CHAPIN'S church on the 4th, and he was buried by the side of his wife, in Greenwood Cemetery.

Horace Greeley.

The readers of the RURAL NEW-YORKER are familiar with the life of the great and good man who has just died. Only a few months ago we published his portrait, with a sketch of his life, after he had been nominated for the Presidency. The portrait then given was an enlarged transfer from the steel engraving which adorned the invitations issued last February, in honor of his sixty-first birth-day. What a world of labor, care, and sorrow he has passed through since that joyous occasion! In the brief space at our command, we can only outline the grand and heroic life of this remarkable man, for whom the world is in mourning to-day.

HORACE GREELEY was born on the 3d of February, 1811, in Amherst, N. H. His parents were poor, and he had a hard struggle with poverty, but he was always fond of books, remarkably temperate, and industrious. He commenced as a printer's boy, and after hard work in various country towns, he came to New York, where he found employment as a type-setter. He married, in 1836, Miss MARY Y. CHENEY, who has so recently died. We need not repeat the story of his busy life—a life known and read of all Americans. Enough that he issued the first number of the *N. Y. Tribune* on the 10th of April, 1841, and that since then his name has been interwoven with the history of the country, has been longer and more prominently before the nation and the world than that of any other American. He has exerted a vast and lasting influence upon the moral and political condition of the country; he has educated more people to a just appreciation of truly republican institutions than any other one man; he has been an advocate of all good reforms; has generally stood high above party politics, laboring everywhere for the good of his fellow men.

—Our acquaintance with HORACE GREELEY began in 1836, while we were a printer's boy, and has been somewhat intimate of late years. Since the removal of the principal office of the RURAL to New York, he has proved a good friend and safe adviser of the writer—and we have abundant reason to deplore his loss and revere his memory. But we must not utter what the emotions of the heart prompt in regard to the amiability and generous kindness of our departed friend. He has been misunderstood, misconstrued and hence abused by many, but will be appreciated in the future—for his record is such that his fame must be lasting. The portrait herewith given is from a photograph Mr. GREELEY gave us last summer, (remarking that it was the one he liked best,) under which he then wrote the autograph that we have caused to be transferred.

THE FRICTION NEEDED.

FARMERS need mental friction. What a man reads, or what he thinks, requires discussion as much as food does chewing. The man who looks at life from a single standpoint sees but one phase of it, and that very imperfectly. We press this matter of farmers' conventions, clubs, exchanges, sociables, again upon the attention of farm readers, because we have an abiding faith in its utility. It is an educational agency no neighborhood of would-be progressive farmers can afford to forego. "Why, sir," said a farmer to us to-day, "our Club has done more to improve the agriculture of our town and increase the market value of our farms, than all other agencies combined. Men who were supposed to know little, and almost without influence, have come right to the front, while others, inflated with egotism and full of assumption, who believed themselves neighborhood oracles, have fallen back to their places; they were mere gas bubbles; and a little joint discussion of their theories and notions let the gas out, and the bubbles collapsed. They are now content to learn of men at whom, three years ago, they sneered. I tell you it is a great thing to show who's who!"

Meet once a week, gentlemen, if it is only in some one's barn, and have a good talk over the uppermost matters in your minds. If you do not choose to hold a formal meeting, hold an informal one. If the roads are bad, talk about good ones, and devise ways and means to make them good. Think, and talk together and you'll find you know more (or less, which is an equally profitable thing to find out) than you thought you did. The more you know the more you'll want to, and you will have each other to draw upon for it.

If this advice seems in any degree arrogant or presuming to anybody, let them be assured that it is not intended to be; it is simply urging the doing of what we know, from much experience and observation, it is profitable to do.

THE NATIONAL SWINE BREEDERS' CONVENTION.

ELSEWHERE we publish an abstract of the proceedings of this Convention at Indianapolis, Nov. 20, received from our Corresponding Editor, who was present. Our readers interested in the breeding of swine will find it profitable reading. Since it was in type, we have "interviewed" Col. F. D. CURTIS, Delegate at Large from New York, and the man who first suggested such a convention, and has done much to insure its success and secure practical results that will advance the interests of all honest swine breeders in the country. Col. CURTIS speaks in enthusiastic terms of the Convention, both as to its composition and the spirit with which it undertook and accomplished the work before it. These results, so far as we have seen the record, seem to confirm his opinion of the wisdom and disinterested motives of the members of the Convention. Personal preferences and interests seem to have been subordinated to the broader purpose of fixing types and standards of excellence of the different breeds that could be regarded as broad and general, and yet critical enough to meet the demand for a common standard. The answer made by the committee to the question, "What constitutes thoroughbred swine?" could not have been different; and the supplementary recommendation that a herd registry by breeders of the respective breeds be made, seems to us very important and desirable. Not the least important action of the Convention, as affecting the general breeder and feeder of swine, was the definition of a good market hog—the establishment of a standard of excellence to which those who have only mixed breeds should aim to attain. This standard of excellence of a hog for market was, we believe, made by men experienced in the producing for and purchasing of hogs in market for packing and consumption. Every owner of a pig—especially every breeder and feeder of pigs is interested in studying it. The scale of points adopted for the guidance of judges at fairs will be found most useful, and insure, if adopted by the different societies, juster and more intelligent awards. When the proceedings, complete, are published, we shall give our readers more specific information concerning the action of the Convention relative to the different breeds.

Horace Greeley's Love of Rural Life, like that of many eminent men of both ancient and modern times, was intense. His happiest days were spent on the farm—his homestead at Chappaqua—where handling the ax and hoe, planting and pruning, became his recreation. And his writings on Agriculture—including "What I Know of Farming," and his contributions to his own, this and other journals—prove that he was no tyro in the science and practice of what WASHINGTON pronounced "the most Noble and Honorable, because the most Natural and Useful, Pursuit of Man." Speaking of Mr. GREELEY'S fondness for farming, CHAS. A. DANA of the Sun (long associated with Mr. G. on the Tribune) says:

Mr. GREELEY'S farming proclivities have been the butt of a great deal of ridicule. But his devotion to agricultural pursuits was not mere affectation. Though his hard experiences in childhood and boyhood in New Hampshire and Vermont might seem fitted to wean him from farms and farmers to the end of a life as long as METHUSELAH'S, he was fond of the woods and the fields, of cattle and of sheep, and of planting crops and reaping harvests, though perhaps his specialty in this department was setting out fruit trees and trimming forest trees. Next to mingling in politics this latter operation was the delight of his sheltering years. It seemed to awaken reminiscences of those early days when he and his father used to fell the elms and the pines of the granite hills and green mountains of his New England home.

BUSINESS INFORMATION.

A Good Piano.—Regarding music as one of the chief attractions of home, we would suggest to our readers who have no piano, or those who have inferior ones, an examination of those made by GEO. STECK & CO., 25 East Fourteenth St., New York City. We still hold to the opinion expressed in a previous article relative to these pianos, and are glad to hear that the public appreciation of their excellence is ever on the increase. Although the sales of these pianos are immense, there are "a few more of the same sort left," and we beg our readers to make a note of the fact.

Silver and Plated Ware.—Our readers have doubtless noted the advertisement of Messrs. SIMPSON, HALL, MILLER & Co., No. 9 John street, New York, and we only call attention to it now to say that the advertisement is decidedly modest in its statement of goods to be found in their store. The stock is enormous, and the variety apparently inexhaustible. For beauty of design, elegance of execution and intrinsic worth, we know of no manufactures which surpass them. In the approaching Holiday times we shall be surprised if the store of Messrs. SIMPSON, HALL, MILLER & Co. does not prove magnetic, though their goods be silver.

PUBLISHER'S NOTICES.

TO EVERY READER!

Read Our Premium List, on preceding page, and then try for a slice of the "*Good Pay for Doing Good.*"

Send for the Documents!—Our new Show-Bill, Supplement, Prospectus, &c., are *now ready* and will be sent *free and post-paid* to all applicants disposed to form clubs. Send for and use the documents!

The Premium Picture Is sent to All who pay $2.50 for a copy of the RURAL one year, and *not to those who only pay the club rate.* Club subscribers can secure the Engraving, however, by adding 50 cts. to the usual club price ($2.) Don't forget this.

Begin Clubs Now!—And to all who want the paper from date, or either one year (at $2.50) or 15 months (at $3) from Oct. 1, we will send the paper accordingly, with Premium Engraving post-paid. The whole club can start at one time, or part Jan. 1st and part earlier. Note this fact.

BUSINESS NOTICES.

HORSE EPIDEMIC.

A PHYSICIAN in a communication to a Buffalo paper about the Horse Epidemic, says:—"Externally I used and would recommend Dr. Trask's Magnetic Ointment to the throat, around the ears and on the forehead. This ointment contains tobacco and lobelia, and operates upon the mucous glands of the head and throat by causing an increased flow of secretion from them, at the same time by its relaxing effect removing the stricture and giving almost instant relief to the cough and breathing." It is kept by all Druggists.

Modes and Manners.

LADIES' HEAD WEAR.

Bonnets and Hats

this season are larger than last, and there is a more marked difference between them. The former are worn by elderly ladies, and always in full dress, except for young girls, whose only head covering is the round hat. The most popular shape for the bonnet is high crown, the suspicion of a cape and a turned-up brim. This last is simply faced with velvet and edged with a cord. If the face of the wearer should demand it, a little ruching of black lace is added, and occasionally a small, bright bow. The most stylish fronts, however, are perfectly plain.

The material and color of the bonnet should always correspond with the walking costume, for now it is understood that every lady shall have one costume for the street and for paying visits. Black velvet, though always in fashion, is not so universal. As the most popular color for costumes is sage green, so we find it used very largely for millinery purposes. Whatever be the color used, the bonnet is made of different shades. The material will be velvet, which now comes in every hue, the ribbon of lighter shade; and the feathers and flowers of contrasting color. If black velvet is used, a scarf of blue silk of another hue is generally introduced. A very pretty combination for black velvet is the rich bronze lately introduced.

Trimming.

Bonnets are still very elaborate; in many of the establishments they are but a conglomeration of lace, ribbons, jets, feathers and wings. It requires a very skillful artiste to combine so many materials handsomely. Most of the trimming is massed at the left side or behind. In front, a band of cut jet is very handsome, as they come in most exquisite designs. They cost $1.25 and up to $3 and $4. These, or a jet aigrette, are found in almost all bonnets. Ostrich tips are in general use for younger ladies. They must always be of the color of the bonnet, though not the same shade. They are sometimes mingled in strange contrasts, as sage green and light blue. When chosen with a nice eye to color harmonies, they are very pretty. We would not advise any one to undertake it unless sure of success. Long willow plumes are used on the bonnets of elderly ladies. They are very graceful and suitable. They come in any shade, and cost $3, $4 and $5. Black lace is largely used. Every bonnet has its tulle scarf, edged with thread. It mingles very nicely with other trimmings. Deep thread lace forms a pretty trimming, as will be seen in one of the illustrations we give. The beauty of lace, however, depends on its quality. None but pure thread should ever be used on a bonnet. In addition to other trimmings, wings are indispensable. They come in all varieties. Bright colors are not used, and the bluish-greens have become common. The handsomest are black and lustrous bronze. They are arranged standing from the midst of bows of ribbon and lace, or folded over in their natural fashion.

Flowers, as may be imagined, are more used for their foliage than for themselves. The flower is simply a heading for long, trailing vines of ivy, rose leaves, laurel, in browns and Autumnal hues. No bright colors are introduced. Roses are large, yellow and streaked with dark red; or of that shade known last season as Paris-in-ashes, which is a dark red, streaked with gray. The stems are a conspicuous part and imitate nature as closely as possible; the leaves are so arranged as to display these. Instead of flowers we find often bunches of metallic berries, the mountain ash or prickly thorns. Combinations of colors are never used; there are no more bright bouquets in vogue.

On opera hats clematis, wisteria and morning glories are used, but never in street wear. Flowers are always used for outside trimming. The head nestles in a bunch of lace, or stands up prominently on the crown; the vine trails down the tulle scarf in the back. Strings may be of lace or ribbon. If ribbon, they are two yards long, and are tied with long loops under the chin. If lace, they are loosely knotted. Young ladies tie theirs under the chignon.

There are many fancy bonnets made of silk with soft, high crowns, and the front shirred, leaving a little ruffle at the end, which is lined with soft blue or pink. These are exceedingly pretty; they are very simply trimmed, often with a bow the color of the bonnet, tied with the color of the front underneath. Such bonnets, of course, should have nothing bristling or stiff about them.

The sailor bonnet is exceedingly stylish; it has a plain, turned-up brim, square, low crown, around which is loosely wound a ribbon, knotted at the back with streamers, and caught by a tea rose with foliage. Very pretty opera hats are made of light blue or pink crape, and trimmed with a white tulle scarf with flowing ends and delicate flowers.

For mourning, the small cottage bonnet, coming close to the head, with a widow's cap and ample veil is most suitable. In second mourning the veil is pinned at the side with jets.

Hats.

The trimming for hats does not differ materially from bonnets. The same materials and combinations are used. The absurd fashion of wearing the hat on the back of the head is passing out. They are generally formed of velvet, with high, soft crowns. There is a style, however, called the Rabbigns, which is scarcely introduced, though very popular abroad. It is very high and stiff, and takes its name from the cap of the Jewish Rabbi. Its whole aspect is stiff, and will be becoming only to those who can wear severe styles.

Felt hats are very popular for school girls. They are trimmed with a band of gros grain ribbon and a wing; they are in shape like the old Alpine hat, but are called the Cavalier.

Children in Winter wear little shirred bonnets of velvet lined with white or contrasting tint, or masses of lace lined with quilted silk. Fashion now wisely demands clothing thick and warm, in every particular, for the children.

The Fashion Plates.

Fig. 1.—Dress bonnet of black velvet. Two pieces of lace; trim the front one standing around the crown, the other descending over the brim, separated by a velvet band. A velvet bow on the side and lace scarf in the back. Moss roses and foliage in the back, mingling with pale, blue feathers.

Fig. 2.—Front of dark green. Bow of velvet, and lighter shade of ribbon fills the space between the front and crown, which is very high. On each side a tulle scarf passes to the back, where it is caught by a tea rose. Lace strings.

Fig. 3.—Bonnet of tulle trimmed with Chantilly lace and resada green velvet. Bronze foliage, and a green and white aigrette.

Fig. 4.—Felt hat, lined with black velvet. A tulle scarf mixed with black velvet, holding a closed wing and black tips. A long feather and tulle ends at the back.

Furs.

This season furs are worn more than ever, by both sexes. We notice many men who have large cuffs and facings of seal-skin for their overcoats. Some have their coats lined with fur. Black Astrakan and Persian lamb is also much worn by gentlemen. Caps of fur for men are very fashionable. They are usually made round, with no visor.

Fur trimmings for velvet and broadcloth cloaks and over-sacques are much worn by ladies. Black, silver, and blue foxes are fashionable, and Russian and American sable is in high favor. For evening wear nothing is so fashionable as ermine. We have seen a few opera cloaks made of swan's down. Fur caps for ladies are worn considerably. They are usually ornamented with a tail of the fur-bearing animal. The old-time hon is again fashionable. Muffs, as a rule, are small.

Black Silks.

Black silk costumes have again proved to be the most popular of the season. Two-thirds of the latest importations consist of black suits, and it is said that WORTH'S costumes for Parisiennes are almost wholly confined to black and green bronze silks. This elegant dress still remains the fashionable uniform for church, visiting, the theater, the promenade, and is the semi-dress suit for afternoon weddings and receptions. The choicest trimming for such dresses is fine embroidery on the flounces; elaborate jet passementerie, with crimped tape fringes, and a quantity of velvet in the way of facings, vest, waistcoat, and sashes, are next in favor. Lace is less used at this season than in the Spring.

LADIES' HEAD WEAR.

NEW PUBLICATIONS.

Swinton's Progressive English Grammar.—New York: Harper & Brothers.

Prof. WILLIAM SWINTON, the author of this work, is well-known as a writer on the English language. All of his books are valuable. He well says the study of grammar should be the most interesting of school studies. That he has nearly succeeded in making it so, this book proves. He illustrates all his positions with numerous examples, thus leading the pupil on by easy steps. The book contains 207 pages, is neatly printed, and will make a valuable text book.

What Katy Did.—By SUSAN COOLIDGE. Boston, Roberts Brothers.

Another superb story for the holiday time, for young folks, beautifully illustrated, by one who has already proved a favorite. The book has thirteen chapters, and relates in a delightful way the adventures of a whole family of children, from rambles in the meadows to Christmas time! The price is $1.50, and every child who gets a copy should be happy.

Clarks' Beginners' Grammar.—New York and Chicago. A. S. Barnes.

A small work, very simple in its design, full of illustrations and diagrams, one of the "National Series." If the children of the rising generation do not love grammar, it will not be the fault of the book-makers. The author, STEPHEN W. CLARK, is a well known grammarian, and having studied the wants of young folks, has been able to give them an admirable text-book.

The Lakeside Monthly.

THIS very excellent Chicago magazine has recently been giving many articles and illustrations of the city of Chicago, which are of interest to all who care to read of American pluck and energy. The October number was a beautiful anniversary record of the great fire. The November issue had many readable articles, which compare favorably with those found in the magazines of Eastern cities. The Lakeside is $4 a year, published by S. J. SPALDING & Co., of 21 South Canal street.

Shawl Straps.—By LOUISA M. ALCOTT. Boston: Roberts Brothers.

THIS is volume two of "Aunt Jo's Scrap-Bag" series, from the pen of a famous and well-known story teller. Miss ALCOTT has recently made a tour in Europe, and in this new volume she takes her little readers through Brittany, France, Switzerland, Italy, and back to London. The story is a charming one, well told. Price, $1.

A Sketch Map of the Nile Sources.—Philadelphia: T. Ellwood Zell.

A beautiful map, in covers, of the Lake region of Central Africa, showing Dr. LIVINGSTONE'S recent discoveries, and Mr. STANLEY'S route. It sells for 25 cents.

How I Found Livingstone.

MR. STANLEY'S work, "How I Found Livingstone," is now so far advanced that Messrs. SCRIBNER, ARMSTRONG & Co. of New York, will issue it at once. "How I Found Livingstone" is a complete and consecutive narrative of Mr. STANLEY'S able exploit, and has been entirely rewritten by him for this book. It includes a large number of thrilling incidents never before published, and is the only record of his adventures which is published under his sanction and authority.

NEW MUSIC RECEIVED.

FROM WM. A. POND & Co., 547 Broadway, N. Y.:—"A Maiden Set Complaining," song, by W. WADSWORTH. "Some Day, Some Sweet Day," song, by S. H. DYER; brilliant and effective. "I Saw Thee Weep;" ballad, by JOHN WIEGAND; suited for baritone voices. "Only a Dream;" ballad, by the late W. W. WALLACE; simple, but artistic and effective. "Thy Name;" ballad, by BERTHOLD TOURS; somewhat too dramatic to be called a ballad." Messina, Canzone Siciliana," written and composed by FABIO CAMPANA. "Beautiful Belles;" polka, by T. M. BROWN. "Mein Dein," (Ever thine own,) morceau for piano by L. HAGEMAN; requires considerable flexibility of finger for its execution. "Grand Union Waltzes," by C. MORTIMER WISKEY. "Le Roi Carotte;" galop, arranged by THOMAS BAKER. "Beautiful Blue Danube;" celebrated Strauss Waltz, transcribed by S. B. MILLS.

From J. A. BUTTERFIELD, 257 Madison st., Chicago:—"Kiss Me, Mamma, I'm Going to Sleep." Song, founded on an incident in the wreck of the steamer Metis.

From F. W. HELMICK, 278 West Sixth st., Cincinnati:—"Mag's Waltz." Composed by A. C. SEDGWICK.

Our Story-Teller.

DENIS ALLEYN'S TEMPTATION.

BY DE FORREST P. SUMMERSON.

"I WONDER what keeps DENIS so late to-night? He said this morning when he went away that he should be home earlier than usual. It's already gone seven o'clock, and as yet he has not shown himself. I do so wish that he could find some other employment. I have always had a wholesome dread of these iron furnaces. I never see one in full blast but it sets me thinking of what hell must be."

And just here good Mrs. ALLEYN stopped short her thinking aloud, and went to the open doorway to meet DENIS, who was coming up the walk.

"Why, what in the world ails you, man? You look as if you were ready to faint."

As if to vindicate her words, DENIS ALLEYN did actually totter at that moment and fall to the ground.

BARBARA ALLEYN was quickly at his side. She was a woman who could think and act quickly; and when emergencies like this called for calmness and cool, decided action, she was strong enough and cool enough and could control her nerves sufficiently to act.

She hastily unfastened his shirt at the throat, and then, taking both his hands in hers began to rub them as if her very life depended on the strength she bestowed on this task. Soon DENIS began to show signs of returning consciousness, and opened his eyes full upon her. In a few moments he spoke:

"I don't know what to make of this, BARBARA," he said. "This is the second time to-day that I have fainted away. I have not felt very well for several days, but had attributed it to the extraordinary warm weather. Why! the thermometer actually stood at one hundred and four degrees to-day in the foundry where we were working!"

By this time DENIS had so far recovered as to be able to walk, and together they entered the house.

BARBARA soon had his supper upon the table, and, faint and weak as he was, he could not resist the tempting array of good things she had prepared for him.

There were nice light biscuit and a golden roll of butter beside them. In the center of the table stood a dish heaped with strawberries—that delightful fruit of which poor old IZAAK WALTON said:—"Doubtless GOD might have made a better berry; but doubtless GOD never did;" then there was a full pitcher of cream, they lived just far enough out of the city to keep a cow, a luxury which only those who keep one can fully appreciate.

One would have thought that these two people might at least have possessed contented minds.

If their lives had always run in the same groove as now, perhaps they might. But both DENIS and BARBARA ALLEYN had lived in a much higher position than now. DENIS ALLEYN was the son of an English Lord. Until he was twenty-two he had lived beneath his father's roof. Then one day he made the acquaintance of pretty BARBARA WILTON, and lost his heart at the very moment he met her.

His father had promised him in marriage to Lady ISABEL CLARE, the only child and heiress of an old school-day chum, now Lord CLARE.

There were many reasons why it seemed best to the old man that his son should marry as he had planned.

First, the broad acres of Lord CLARE adjoined those of Lord ALLEYN; and it was the dream of his life that at the marriage of his son the two estates should become one.

Had not BARBARA WILTON'S pretty face come between these plans this dream might have come true; for young ALLEYN was certainly not averse to the charms of the Lady ISABEL. As to that lady, she privately told her maid one day "that there was not so comely a man, or one whom she so much admired among the whole English Peerage as DENIS ALLEYN."

It was early in May when DENIS ALLEYN met BARBARA WILTON, and when the first roses had blossomed in June he plucked the fairest among them and placed it in her hair to wear at her bridal.

Of course when Lord ALLEYN found out what had taken place on this June day, like most Lords whose sons marry different from their wishes, swore a little, then raved, then swore a little more, and finally vowed that he would no longer receive him beneath his roof, or own him as a son.

So DENIS ALLEYN snapped his fingers and said: "He didn't care a fig about the Peerage; he didn't want to be a Lord, and he was sure he was glad to escape so easily. He had his BARBARA, and she was better than all the high-sounding names in the world.

"They would go to America, and there a man could earn for himself a name and not have to wait for another to die before he could become anything but Lord So-and-So's son."

And go to America they did. From his earliest boyhood DENIS ALLEYN had a natural aptitude for making models. Not that he had an inventive genius; but an innate love of copying that which pleased him, and constructing for his own amusement its exact counterpart in miniature.

His father had often chided him for the idle waste of time, as he called that which was spent in making these models. "Get a thorough education. Cultivate your mind, and leave these things to those who are forced to earn the bread they would eat. Things that are higher belong to you; there flows no plebeian blood within your veins.

With Lord ALLEYN the idea of a man having to work for his living was considered as something too far beneath the plane on which he was born, to allow of a recognition, as other than of a plebeian nature. He had not learned that only here is true nobility found.

For nearly a month after they arrived in New York, DENIS ALLEYN sought in vain for employment. But when he had almost given up the idea of being successful in a large city, and resolved to try elsewhere, there came to him one day a message from one of the men on whom he had called in the early part of his seeking employment.

"If he would call the next morning," the message read, "arrangements could probably be made for a permanent engagement."

He went. The week previous the man who had attended to the making of models had died. If he felt thoroughly competent to fill the place it was at his disposal.

DENIS ALLEYN did feel thoroughly competent and acted accordingly. He accepted the situation. To a man with nothing else to depend on, and whose purse did not contain the "Sands of Pactolus," what other was there to do but accept, and that at once.

The first year all went swimmingly. DENIS ALLEYN felt that he had found a groove in which he could run on to success, if nothing out of the ordinary should come in between him and that event. He bought him a home just out of the city limits, and furnished it neatly; and BARBARA'S care, and the smiles with which she met him at the close of his day's work, made him feel that his was a happy one.

At the end of the year he was prostrated with a dangerous fever, and for months his life hung seemingly by a single thread, the severing of which might occur at any moment.

BARBARA watched by his bedside with unceasing perseverance. To her the idea of his dying was something so terrible that she dared hardly give it a thought. She was not strong, and at times it did seem as if she, too, might be prostrated; and yet the strength that is born of love that is tender and true was given her, so that she endured until her husband was able to sit up.

Then the overtaxed nerves gave out, and for days her life hung in the balance. The neighbors came in and administered to their wants so that they were amply cared for.

At the close of a day, just when evening had begun to throw her veil over the earth, shutting it out from sight with its beauty, BARBARA opened her eyes once more to the knowledge of what was going on about her. She had been too ill to even speak, and had not recognized any one for days. "Oh!" she said, "I have had such a beautiful dream. I thought I was walking along the banks of a beautiful river with my husband. The side on which we were was overgrown with brambles and weeds, but through the green foliage that lined the other side we were continually beholding scenes of greater beauty than we had ever before seen."

Myriads of flowers of gorgeous hues; birds of rarest plumage, and whose songs were sweeter than that of our own nightingale, met our gaze and greeted our ear on every hand. In vain we sought to find some place to cross over, and just as we were about to turn away, an angel appeared to us and said:—'The time of thy coming is not yet. When thy mission is ended on earth; this is the reward thy Father hath in store for thee,' and then he was gone."

Whether this was the "baseless fabric of a dream," who knows? I sometimes think that our Father does give to his poor, suffering children on earth visions like these, which are not all dreams, to strengthen them to new effort in well-doing, that in the end they may have this beautiful world which they have seen as their reward.

When DENIS ALLEYN had fully recovered he went back to the old work again.

BARBARA regained her health much more rapidly than he, and while he remained too ill to earn anything, she had toiled with her needle to supply the needs of their home.

I said DENIS ALLEYN went back to the old work again; but he did not go willingly. During his sickness there had come to him, at times, thoughts of the home he had left for the love of BARBARA WILTON, and during some of these times there had come, too, a faint longing to return to that home, its ease and its luxury. But then there was BARBARA! His father would not receive him should he return with her. What if he should go alone? BARBARA had shown that she could take care of herself. Perhaps if he were to plead with the old man, his father, and beg his forgiveness he would listen to him, and at last yield.

But if not? He could then remain a few years, and during that time renounce his wife. Perhaps in a few years his father would die. The last he had heard from him he was considered in a decline; and then, when his father was dead, and he was righted in the will, he could return to BARBARA, or she to him, and these days of unceasing toil would come to an end.

This temptation came to him often during the days and nights that he lay upon his bed of pain. But when he was able to be about once more, and the patient, pale face of BARBARA was before him he dared no longer let this thought take possession of his soul.

The day after the fainting it came full upon him again. Indeed, that night while at the tea-table he yielded so far as to say: "If within one month I am not stronger I will go." And BARBARA, unconscious of what was passing in her husband's brain, chatted on as though the only care of her life was to please him.

After all, I do believe men are weaker than women. They are the oftenest to fall. When great temptations come, believe me, nine times out of ten a man will yield—a woman, one.

When a month had gone by and DENIS ALLEYN found that he was really no better, he thought once more of the resolve he had made. Somehow the struggle was more severe now than when he had first thought of going away. The days of unceasing care on BARBARA'S part had endeared her to him more than ever.

And yet when the tempter whispered in his ear that only by sacrificing her love for a time could he in the future, when his health should fail entirely, provide for her wants, he heeded that whisper and commenced making preparation for his journey.

Of course, all that he did must be done in secret. No shadow of suspicion must BARBARA have of his plans. When he had gone and she had found the written explanation as to the *why* of his going, would be time enough for her to know.

I wonder if all men carry an index of what is going on in their heart on their faces? DENIS ALLEYN certainly did on his. He fancied that his BARBARA remained in utter ignorance of the plan he had formed. Not so! From the first hour of his planning she had known that all was not right with her husband; that some wrong thought or act had entered the well-spring of peace in his heart and troubled the waters.

BARBARA ALLEYN was not a woman to question on a mere suspicion. She would watch and wait. If, as she feared, something preyed upon her husband's mind, robbing him of peace and happiness, she might, by remaining silent, in the end be able to avert the impending danger. Danger she knew there was to such as he who would yield all too easily to surrounding circumstances.

In his sleep he would often mutter half audible words, and once betrayed his secret by an appeal to BARBARA for a full forgiveness of the step he was about to take.

From that hour BARBARA watched him unceasingly. "Poor fellow," she would say, "this terrible illness through which he has passed has affected his brain. I must watch him more carefully now. If he should commit a great wrong I would be as much to blame as he for neglecting my duty in not seeing to him." And so she spent most of the time at his side. He noticed it one day, and said: "BARBARA, why do you always hang upon my footsteps? Do you think I am a child and in need of continued watching?"

Then this woman told him calmly and collectedly all that she had heard him say in his sleep, and of her discovery of the two trunks, full-packed, as if for a journey, and how from the first hour of the discovery she had determined to save him years of sorrow by frustrating his plan of deserting her.

"Have I ever complained," she said, "of my lot? Have I not at all times willingly shared with you the rough places in our lives? To me the love of my husband has been sufficient to make me strong and willing to suffer much. It is true that you have sacrificed much for me. I know how bright the life that might have been yours must seem to you in some of these hours of toil, and sometimes I wish that you had never met me, that it might still belong to you. But, now that you are mine, I cannot give you up even for so short a time as you have planned."

In that one moment DENIS ALLEYN had decided all. He would not give up this woman's love for all the wealth that Lord ALLEYN possessed! With her, as before, he would struggle on. To share life with her, even in a cot, were better far than life without her in the regal home of his childhood.

So DENIS ALLEYN went back to the old ways once more, stronger than ever before, now that the greatest temptation of his life was overcome.

* * * * * * *

Ten years have passed since the night that BARBARA ALLEN discovered her husband's intended desertion. The home which they then occupied has grown more beautiful than then. There are three children that make glad their hearts with their merry laugh and childish prattle. One, the eldest, has been named after the grandfather who lives over the sea and who has relented now towards the son whom once he disowned.

Death, which smooths down many of the hard places in life, has crept into his household and taken from him his daughter on whom he doted. Out of his loneliness grew a longing for the sight of his boy once more. So one day he sent a white-winged messenger of peace over the sea, bidding his son to bring his wife and little ones back to his father's house and abide therein. "This life is not of long enough duration for us to afford these feuds to exist. Let us forgive as we hope to be forgiven," it said. And this white-winged messenger failed not in its mission, for DENIS ALLEYN gathered his flock about him and sailed over the sea to his father's home.

He did not sell the home in which he had passed so many happy hours, and in which he had overcome the one great temptation of his life. To his wife he said, "We will keep it; who knows but in the future we may wish to return to it. It will be easy to find a tenant for it, and I prefer renting to selling. We may yet end our days here."

When they once more reached England they saw at the first glance that Lord ALLEYN had not long to remain in this world. The loss of his much-loved child had told fearfully upon him, and a settled cough had already reduced him to a mere skeleton. His joy at meeting his son once more was very great; and even BARBARA and the children were welcomed with unfeigned gladness. Barbara took especial delight in administering to his wants, and, as it was no welcome task to Lady ALLEYN, she soon became his established nurse.

One day, when BARBARA was alone with the old man, he spoke to her of dying. "Before that time comes I want to right a great wrong," he said. "In the days of his boyhood DENIS ALLEYN was a good son to me. Had it not been for my folly in regard to his marriage with you, there would never have been an estrangement between us. I intend to leave all I possess to him, with the exception of enough to enable his mother to live independently if she chooses so to do. But it is my wish that her home shall always be with you, and this is the only request I have to make."

After Lord ALLEYN'S death, which occurred in less than one year after DENIS ALLEYN'S return, he and BARBARA decided to return to their American home. "I do not like this exalted style of living, DENIS," BARBARA said one day to him, "I am sure the happiest days we have ever known were spent in our cottage home far over the sea."

And DENIS, when he had listened to what she was saying, answered her thus: "It shall be as you say, darling. I, too, am tired of all this stately magnificence; it makes me feel as though we were living in a region of perpetual icebergs; we will return to America, where Lord ALLEYN will drop his title and be known only for the good he may do to those who are suffering around him. I will not dispose of the estate which has been left me by my father. Some time in the future it may seem best for us to return to it."

At the close of an October day, upon the deck of an out-going steamer, DENIS ALLEYN, his wife, and mother who held two of her grandchildren by the hand, stood and watched the fast receding shores of their native land.

In their faces could be found no traces of regret, but a soft, refined expression of hope that the land which lay before them would give them greater joys, reigned there instead.

We will skip over a few chapters in the lives of DENIS and BARBARA ALLEYN; pass even beyond the first year after their return to the home where first we met them. The house is somewhat larger than then. There has been a wing added to it of such considerable beauty as to greatly improve its appearance. In this wing Lady ALLEYN makes her home, and styles it her castle. The grounds, too, have been enlarged and cared for with a nicety that calls forth the admiration of every passer by. The choicest of flowers bloom here each in their turn; and BARBARA gathers them from time to time, and arranges them in bouquets for the sick room of some neighbor or friend.

With their wealth they bestow many charities. In all the villages around DENIS and BARBARA ALLEYN are known as "The Good Samaritans." He does not cling to the title of Lord ALLEYN. Not one of all his neighbors has he ever allowed to address him by it.

"This is a land where the only title that a man deserves can easily be earned by living and doing right—that of a *man*, and it is all that I desire."

By all who know him he is truly respected and beloved. Many are the kind deeds done by him each year of his life. To his mother has he proved the kindest of sons, and he often says to her when she complains of being a burden to him and his wife, now that she has become old and feeble, "Mother, I should be unworthy to be your child if for one moment I forgot my duty to you. It ought always to be the one great pleasure of a child that he is able to minister to the wants and comforts of her who gave him life. No, mother, the burden is not too heavy for either BARBARA or me to bear."

And so Lady ALLEYN, secure as she felt herself to be in the love of her children, lived on contented and happy, until one day an angel stepped over the threshold and sealed her eyelids with the peaceful balm of that sleep named death from which there is no earthly waking.

The day after Lady ALLEYN was buried, DENIS sat with BARBARA on the piazza. For the first time since BARBARA discovered her husband's plan of leaving her, he spoke of it.

"How weak of me," he said, "to think that I would have deserted you then!"

And BARBARA answered him thus:—"It was not because you loved me less, my husband; but that you loved me too well. Let us never allude to that again. If you were weak then, the years that have passed since have made you stronger, until now you are the perfect man. It is only they who are delivered from temptation that ever know how to pity those who like themselves have been tried as by fire. If it were not for this, my husband, you would never have learned how to extend sympathy to those whose need is as great as was yours in the past."

Stooping, DENIS ALLEYN kissed his wife, saying as he did so:—"A virtuous woman is a crown to her husband all the days of his life."

And the soft rays of the silvery moon in the heavens above them fell on them both in silent benediction as he uttered these words.

Ladies' Post-Folio.

THE SPIRITUAL LIFE.

THERE'S a wideness in God's mercy,
Like the wideness of the sea;
There's a kindness in His justice
Which is more than liberty.

There is no place where earth's sorrows
Are more felt than up in heaven;
There is no place where earth's failings
Have such kindly judgment given.

For the love of God is broader
Than the measure of man's mind;
And the heart of the Eternal
Is more wonderfully kind.

If our love were but more simple,
We should take Him at His word;
And our lives would be all sunshine
In the sweetness of our Lord.

[*Faber.*

WOMAN VS. WOMAN.

BY GLEN CAROL.

IT is a well-known saying, and almost without exception a true one, that "woman is woman's enemy." Man, lordly, independent man, may do as seemeth best unto him—or, rather, as seemeth worst. He may "slink and prowl," like the "wolves" of which LOWBRIDGE tells us, in by-ways and high-ways; he may visit and re-visit haunts of vice and scenes of midnight revelry, which it would disgrace a woman to look on; in short, he may be just as depraved in his heart and life as it is possible for a human being to be, but if he wear the outer semblance of a gentleman, and moves in polite society, his inner life is made of no account.

Women, strange to say, will invent a thousand excuses for such a man, while for those of their own sex who transgress, even in the slightest, the law and commandment, they have only denunciation, bitter and unsparing. Nay, they will even stoop to seek the opportunity to cast yet another stone at the unhappy victim who shrinks at sight of these righteously indignant ones standing spotless in the eye of the world, well knowing herself to be the wretched target of their scoffs and sneers. These Pharisees are afraid of contamination, evidently, judging from the way in which they gather their pious skirts more closely about them, giving the transgressor as wide margin as possible.

One would interrupt me here, saying, "But women know so well what their fate must be if they break through the barriers of moral restraint, and set at defiance the laws and conventionalities which hold society together. They know what the just penalty for transgressing GOD'S law must be."

True, O! untried and untempted friend, standing upon the serene heights of your own conscious self-security; but if it be GOD'S law, and transgressed by man as well as woman, are they not equally to blame? If we hurl missiles at one in the shape of stinging reproaches and contemptuous sneers, shall we pet and caress the other, passing over the offense with a gracious forbearance worthy of being exercised in a better cause? If we banish one from society, shunning her as though she were a loathsome reptile trailing along GOD'S earth, shall we not treat the other in like manner? Why should one be pardoned and the other condemned? Why may we not, following CHRIST'S example, lift up the weak, bidding them "sin no more?" It is this bitter injustice, this unrelenting, unforgiving spirit manifested toward her by those of her own sex, which drives many a woman to perdition. Woman can lay brook contempt and scorn from woman. The first wrong step taken, the victim looks around to find every door and every heart barred against her. It is useless, she thinks, to attempt to blot out this one stain upon her present by a pure and unfaltering after-life. There are none to aid her, and to struggle on alone seems too disheartening. There is nothing to tempt her to a virtuous life, and everything conspiring to lead her onward in the path of evil. O! if, sometimes, we could but know the circumstances attendant upon the downfall of those unhappy souls, would it not move us to pity where we now condemn? When will women learn to be just toward one another, and to display toward their erring sisters that spirit of forbearance and forgiveness so abundantly exercised for the benefit of man?

LAUGHING AT EACH OTHER.

BY M. H. S.

Is there anything much more ludicrous than the thought that all the world are laughing at each other? While my neighbor is laughing at me because I'm so short and fat and awkward, I'm laughing at him because he always reminds me of a flag-pole dressed up. Even my good friend friend across the way would not for the world have me know that he is laughing at me, nor would I for two worlds have him know that I am laughing at him—but nevertheless such is the fact. "Laugh and grow fat" is the old adage. The old adage is not always true, because my neighbor is very thin, and he is always laughing over somebody's follies and failings. He sits in his softly-cushioned chair, imagining—as the smoke curls up from his cigar—what a different world this would be if all these foolish people would only do things more in accordance with his ways of thinking.

Now, I would not for the world say a word to discourage any one from laughing—far from it. Keep on laughing at me all you choose, provided you do not laugh in my face, as wise Mr. Winkle does when he lifts his hat to me on the side-walk, and never dreams that I see the twinkle in his eye; ah, my friend, a little wisdom on your part would hide that twinkle until I have passed, and then we should both be enjoying ourselves at the same time.

A merry laugh doeth good like a medicine. Let your laughter be of the good-natured sort, or, friend, let me say to you in the most confidential possible way, that you will soon cease to laugh altogether, for it is only the good people who can enjoy the kind of laughter which cures indigestion and keeps away the doctor. Yes, laugh heartily at each other, but with the very best intentions, and don't forget that they are laughing at you at the same time. It is all fun, you know; how can any one raise the least objection?

Rochester, N. Y.

VICTORIA AMUSING HERSELF.

THE Court Circular says:—The Queen's walks and drives are not confined within her own policies; she crosses the Dee almost daily, and is quite as often seen on the opposite side of the river. She always uses an open carriage, but not always the same. Sometimes it is a wagonette, sometimes a low pony phaeton. No guard of honor accompanies the royal equipage, however. Her trusty attendant, JOHN BROWN, sits on the box beside the coachman, and when there is not room for him there he rides on horse-back by the side of the carriage. No fuss attends the Queen. An outrider a little in advance of the royal carriage clears the road, and the Queen goes quietly on her way, with a smile and a nod for any who chance to meet her. But as a rule, Her Majesty is not intruded upon when she ventures beyond the royal domains, unless on Sunday, and then it is strangers only who run after her. The cottagers do not annoy her, and she comes and goes without molestation. Indeed, they make a point of keeping out of the way when the white horse of the outrider appears in sight. Should the Queen, however, happen to come unexpectedly on her subjects by Deeside, she is deferentially acknowledged. The Queen and her ladies frequent "picnic" in the woods or on the hillside. Materials to make a fire, and cooking utensils, are taken in the carriage, and tea is made on the greensward, and handed round in rustic fashion without any ceremony. At these afternoon "teas" the Queen has no special chair of honor. Her seat is pretty often on the clump of a tree, with her cup in her hand, or any other casual resting place that turns up conveniently. Excursions are made also to various places of interest, and every corrie and glen within reach has been visited by the royal family.

WHY AMERICAN WOMEN ARE DELICATE.

ANOTHER reason of the delicacy of our women is the far greater style affected by all classes in dress, and the wearing of corsets during early youth. Naturally, if one has attained a full and fine physical development, tight corsets, heavy skirts, close-fitting boots and weighty chignons cannot injure to the same extent as when these appliances of fashion are put upon the soft and yielding muscles of a young and growing girl. The noble ladies of England exercise many hours daily in the open air. They do not disdain to don heavy calf-skin shoes and colored petticoats, in which to perform this duty. This, of course, would not alone make them as healthy as they are, were not their constitutions strengthened by a proper physical education before they are eighteen years of age, but it suffices to retain them in a good degree of health. Our fair Americans early in the day attire themselves in charming morning costumes, with white skirts; and then they are averse to soiling these by exercise, and the least dampness deters them from a promenade. American ladies think far more of dress and fashion, and spend more money and time on their toilets, than any women in Europe, not even excepting the French, from whom all our fashions come.—*Galaxy.*

FOLDING LINEN.

THE women of the old province of Anjou are celebrated for their art in folding linen. The renown is an odd one, but it has, nevertheless, bestowed no mean celebrity on the ladies of Angers. The art does not flourish now as it used, and is, indeed, nearly confined to the grand old housekeepers of the grand old chateaux of the place. The linen presses of a magnificent Gothic hospital still show, too, some chefs d'oeuvre of the kind. The good sisters throw open the doors of their immense cupboards with a natural feeling of pride, and reveal to the astonishment and admiration of the visitors the wonders of their dexterity. In a vast sheet, folded into a trough, twenty-four sheep, formed of chemises, are drinking, guarded by a night dress in the shape of a shepherd, and so on. Linen castles, windmills, towers, and abbeses are frequent *tours de force* of these dexterous linen folders.

—Only 578 widows of revolutionary soldiers are now living.

Reading for the Young.

MAUD AND THE CRICKET.

"GOOD night, little Maudie," I softly said,
As I tucked her up in her little bed.
"Good night, dear mamma," she said to me;
"I'm just as sleepy as I can be."

But I scarcely had shut the chamber door,
When her eager voice called me back once more;
"O, mamma!" she said "what is it I hear?
That strange little noise so sharp and queer?"

I listened, and told her all was still
Save a merry cricket, piping shrill;
"He is hid away in the closet here,
To sing you to sleep, my Maudie dear."

Then Maud sat up in her nightgown white,
And her eyes grew big, and round, and bright;
"Now, mamma, please move my little bed
Right up to the closet door," she said.

"Poor little fellow! he wants to speak;
But all he can say is 'Creak, creak, creak!'
And I want to tell him I hear his song,
And ask him to sing to me all night long!"

"I'll leave the door open," I said, "part way,
And let the cricket hear what you say;
Now, while I go to your baby brother,
Two little crickets may sing to each other."

I heard no more from the little pair;
And, when again I crept up the stair,
Over the household was silence deep
Maud and the cricket were both asleep.

But, when sleepy time came to Maud next night,
She pattered about like a fairy white;
Peeped into the closet, and over the floor,
"To find her dear little cricket," once more.

He was not to be seen in any place,
And Maud lay down with a mournful face;
When beneath her crib a voice piped clear,
"Creak, creakity, creak! I'm here! I'm here!"

Then Maudie screamed with surprised delight;
And she always has thought from that self-same night,
That crickets can hear when little girls speak,
And mean a great deal by their "creakity, creak."

[*December Nursery.*

LETTERS TO YOUNG RURALISTS.—XIII.

FROM COUSIN JOHNNIE.

FREDDIE'S letter in the RURAL of Nov. 16th made me think of my own good Grandma, with whom I lived until I was nearly his age. After that, though we moved thirty miles away, she often came to visit us, and I always looked upon her as my own particular company. How happy I used to be, taking her to see the little chickens and the calf and the little pigs, all of which she seemed to admire and enjoy quite as much as I did. And then she seemed just as fond as I was of Georgie, my bald-headed, crying baby, whom she had given me, and whom, out of compliment to her, I had named after the son she had lost. She had beautiful brown hair, very long and thick, which it was my delight to arrange in all sorts of original fashions, giving her many a hard pull, I am afraid, in my awkwardness. When it did not look *too* outlandish she would wear it as I fixed it for the rest of the day; but when it did, which oftenest happened, she would very patiently take it down again, and rearrange it in her own simple fashion, a loose coil at the back and a puff on either temple. But what I liked best of all was her staying with me at night till I got asleep, for I was a foolish little girl, afraid of the dark. My mother knew it was foolish, and would not humor me by staying with me, for the family were always in the next room, and the door open between. But Gumnddy, as I used to call her, would come and lie down on the bed beside me, and with her loving arms around me, I would soon be fast asleep in spite of the dark. She always treasured up every little thing I gave her, and after she died, which was only a few years ago, we found among her things several of my childish letters to her, locks of my tow-colored hair, etc., and in one little box, carefully wrapped up, was what looked like a tiny pearl, but was labeled "JOHNNIE'S first tooth!" I hope all the RURAL boys and girls love "Grandma" as much as FREDDIE does, and are always ready to run and wait on her; and if she is old and childish, are very gentle and patient with her.....I think ETHEL A. D's poetry very good for a little girl of ten years. If she wants to improve she must read the works of the best poets very carefully. A. J. MCKINNEY says, "when a cow gets choked, don't punch her throat with a straight stick," but he doesn't tell us if we may punch it with a crooked one, nor whether we may punch it at all! He says "we mustn't burn horses out to run if *one* is shod," but he omits to tell us whether we can do so if *both* are shod. I am glad he is getting subscribers for the dear old RURAL. Cousin JOHNNIE is trying for a premium, and if she is successful she will tell her little cousins. How many are trying to find out about the apple, as Uncle CHARLES requested them?

A YOUNG NATURALIST.

DEAR COUSINS ALL:—I would like to ask how many of you ever formed or tried to form a cabinet? I commenced forming one about three years ago, and have one now of which I am quite proud. It consists chiefly of geological specimens, although I have some specimens from the zoological world. Every time I go anywhere I make it a point not to return till I have procured something for my collection. A friend of mine went to Colorado this Summer; but he didn't go till he had duly promised to remember me, which promise he fulfilled most grandly, as I will show any one who will take the trouble to call at my home. Another friend has been visiting in California, who has already sent some specimens, and is coming with more.

I want to tell you something how I keep my specimens; perhaps others have better ways, but I don't think as inexpensive. In the first place I procure some cigar boxes; these, after first tacking on the cover, I cut off the top and bottom about three-quarters of an inch from the edge; that is, so as to make two boxes, or trays as I call them, about three-fourths of an inch in depth, minus covers. Then I take a strip of wood about a quarter of an inch wide and insert lengthwise in the tray, forming a partition through the middle. Then cut shorter strips and fasten in the other way, forming smaller side partitions of about two inches and a-half in length, and one inch and a-half in width. Glue all these pieces into the tray firmly, and set away till hardened. Then it is ready to receive the specimens; place these in carefully, labeling each object, telling name, where found, collector and number of specimen. If you desire to have a well-ordered cabinet it is necessary to do this. These trays I place in large paper boxes, such as can be procured at any dry goods store. YOUNG NATURALIST.

The Puzzler.

ILLUSTRATED REBUS.—No. 18.

☞ Answer in two weeks.

BOTANICAL RIDDLES.—No. 3.

1. THE tree in a bottle? 2. And the tree in a fog?
3. And the tree that gives the joints pain?
4. The terrible tree, when schoolmaster's flog?
5. And of what mother and child learn the name?
6. The treacherous tree? 7. The contemptible tree?
8. And that to which wives are inclined?
9. The tree that causes each townsman to flee?
10. And what round, fair uncles they bind?
11. The tree that is entire? 12. And the tree that is split?
13. The tree *half* given to doctors when ill?
14. The tree we offer to friends when we meet?
15. And the tree we may use as a quill?
16. The tree that's immortal? 17. The trees that are not?
18. And the trees that must pass thro' the fire?
19. The tree that in Lath can ne'er be forgot, and in England we all must admire?
20. The Egyptian plague tree? 21. And the tree that is dear?
22. And the one that round itself doth entwine?
23. The tree that in billiards must ever be near?
24. And the tree that by cockneys is turned into wine?

☞ Answer in two weeks.

MISCELLANEOUS ENIGMA.—No. 7.

I AM composed of 17 letters:
My 14, 3, 11, 11, 6 is a color.
My 17, 12, 16, 4, 11 is a reptile.
My 5, 8, 1, 16 is the name of a State.
My 7, 12, 16, 10 is an insect.
My 2, 9, 3 is a pronoun.
My 1, 13, 7 is a covering for the head.
My 15, 16, 3, 17 is the God of War.
My whole is a pleasant pastime.

☞ Answer in two weeks. M. J. K.

CROSS-WORD ENIGMA.—No. 8.

My first is in ride but not in walk,
My second is in club but not in stalk;
My third is in ran but not in stood,
My fourth is in bad but not in good;
My fifth is in call but not in need,
My whole is what we all should read.

☞ Answer in two weeks. M. S.

WESTERN BRANCH OFFICE:

No. 75 North Side of Park, Cleveland' Ohio.

THE RURAL NEW-YORKER'S new Colored Show-Bill, Prospectus for Names, Specimen Numbers, &c., are now ready for delivery to actual and Intending Club Agents, at each of the above Offices.

HINTS, REQUESTS, SUGGESTIONS, ETC.

Premium Picture Now Ready!—Agents and Subscribers will please note that our Premium Engraving is *Now Ready*, and that copies are promptly mailed, post-paid, to all entitled. We are now filling all orders on day of reception, and think we shall be enabled to do this through the season, so that no one will have to wait weary days or weeks for the Beautiful Premium Picture.

Clubs Coming!—Our first Club for 1873 came just a month earlier in the season than the first for 1872, and eight of its ten members paid $2.50 each in order to secure the Premium Engraving. Others are coming, and the Campaign is fairly opened. "Push on the column," good recruiting friends of the RURAL BRIGADE! Now is the Time to Work and Win!

"Progress and Improvement."—MOORE'S RURAL for 1873 will be better than ever before, in both CONTENTS AND STYLE. It will appear in a NEW DRESS of Clear and Beautiful Copper-Faced Type, and present other **Decided Improvements.** Agents and subscribers will please note this, and if they tell their friends, so much the better.

News of the Week.

CURRENT TOPICS.

Disappearance of Cedar Creek, Beneath the Natural Bridge, Va.

THE Richmond Journal says:—We have the following facts from a gentleman who recently visited the Natural Bridge:—On passing into the gorge below the bridge by the usual route, he was surprised to find the bed of the stream (Cedar Creek) dry and unsightly. The keeper of the hotel stated that about two weeks before the creek suddenly disappeared from under the bridge, and our informant, on following up the gorge, found the stream pouring down into the earth, and seeking some unknown channel beneath. On a careful examination three leaks were found, the largest being through a fissure or "fault" in the limestone bed of the stream. These the visitor partially stopped up in a few minutes, and sent a scanty stream on its way to the bridge. Similar facts were revealed by a further examination and the conclusion is inevitable that the rocky substratum of these limestone hills is thoroughly honeycombed by the action of the water. The conclusion is further sustained by the fresh discovery of caves, some of them of considerable extent, in the immediate vicinity of the bridge. Some fine stalactites from one of these caves are exhibited at the hotel.

The Highest Bridge in the World.

THIS bridge is known as the Verrugas Viaduct, on the Lima and Oroya R. R., in the Andes of Peru. It crosses a mountain torrent called Agua de Verrugas, in a wild locality, 12,000 feet above the level of the sea. The structure consists of four deck spans of the Fink type of truss, three of which are 110 feet long, and one, the central span, 125 feet long. The spans rest on piers built of wrought-iron columns. The piers are fifty feet long by fifteen feet wide on top. There being three piers, the total length of the viaduct is 575 feet. The piers are the principal feature of interest, and are respectively 145 feet, 252 feet, and 187 feet high. Each pier consists of twelve legs, which in plan form a rectangle. The legs are composed of a series of wrought-iron six-segment columns, in length of twenty-five feet, connections being made by cast-iron joint-boxes having tenons on each end running into the column. The tenons and the face of casting against which the column bears are machine-dressed, so as to obtain an accurate fit and perfect bearing surface. The columns have an exterior diameter of twelve inches, and a diameter, including flanges, of sixteen inches.

Can a Woman Stand It?

GEORGE WM. CURTIS has been lecturing on "Woman's Opportunities" before the Society of Mechanics and Tradesmen of New York city. Talking of the co-education of the sexes, and alluding to the fact that public educational institutions of the higher grade are opening their doors to women, he says:—"If anybody asks the question, 'Can a woman endure a college course of study?' it is a woman herself who replies, 'I would like you to take 1,500 young men, lace them up and hang 10 or 20 pounds of clothes on their waists, perch them upon high, narrow heels, cover their heads with rats and mice, and stick 10,000 hair pins into their heads, and, if they can stand all this, as the women do, they will stand a college education.' [Laughter.] All the highest authorities on this subject in this country agree that co-education is better for both sexes. Already the bolts of prejudice are softly sliding back to admit a nobler, because a juster, future in the persons of women."

The French of Alsace and Lorraine.

THE thousands of French who have refused to become German citizens in the provinces named above, are distributed throughout France, or have migrated to other countries—many to Algeria and many are arriving in America. In Paris a Relief Society has been organized, with a relief committee of thirty members who receive and relieve about 150 per day, and to whom are paid sums ranging from 5 to 200 francs. All are registered and aided to employment as rapidly as possible. The poor families are sought out by patriotic and benevolent women, and relief given where necessary. This exodus of so large a proportion of the population of two provinces, rather than live under a government by the enemies of their country, is an exhibition of patriotic hatred which is characteristic of the French, and rivaled by the people of few other countries.

What Alexis Thinks of Us.

IT may be gratifying to know what Alexis, the Prince, thinks of us, for at last we have it; but why did he wait until he got to Singapore before he said it, keeping us in suspense meanwhile? He says we are a country of splendid men and handsome women, and that he wants to visit us again. He declares that we not only have the most beautiful ladies in the world, but more in proportion to population than any other country. The only thing he complains of here is newspaper interviewers, who evidently tried him sorely or he would have forgotten it before reaching Singapore.

France and the United States.

THE French Republic having decided to impose discriminating duties upon foreign goods imported into France in vessels of the United States from countries other than the United States, thus annulling the reciprocal treaty between the Empire and the United States, permitting such importation, President Grant has issued a proclamation imposing duties on goods imported into the United States in French vessels from countries other than France, in accordance with laws of Congress.

SEMI-BUSINESS PARAGRAPHS.

The New Wilson Under-Feed Sewing Machine is a perfect lock-stitch machine, making a seam alike on both sides, and is adapted to every grade and variety of family sewing. It does to perfection embroidery, hemming, cording, braiding, fine and coarse sewing of all kinds, with less machinery and complications than any other machine in use, and is sold at two-thirds the price of all other first-class machines. Be sure to call and see it. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

A Whole Library.—In presenting a young friend with Webster's Unabridged Dictionary, we have given him *a whole library*—the most remarkable and complete compendium of human knowledge ever published in a single volume. A man may purchase a Bible first, and then a hymn book, if he is inclined to psalm singing, but the third book should be Webster's Unabridged, as it will prove a great fountain of intellectual light, and will be worth a hundred times its cost to any family that pretends to keep up with the civilization of the age.—*Industrial Age.*

Facts for the Ladies.—Mrs. A. K. BROWN, Galesburg, Ill., has used her Wheeler & Wilson Lock-Stitch Machine since 1857, and it is now in good running order; the first ten years making bags for a flour mill, averaging fifty-five bags a day, besides the sewing for a family of sixteen. See the new Improvements and Woods' Lock-Stitch Ripper.

Watch No. 2260, Stem Winder—bearing Trade Mark "Fayette Stratton, Marion, N. J." —manufactured by United States Watch Co., (Giles, Wales & Co.,) has been carried by me eight months; its total variation from mean time being eighteen seconds.—A. M. OSGOOD, Ilion, N. Y.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Dec. 2, 1872.

THE trade of the past week was moderate, owing to the Holiday interruption on Thursday (Thanksgiving), and the sales of Merchandise were generally limited. The Exports of Produce from this port and of Cotton from the South continue on a pretty liberal scale, affording a good supply of Exchange, which is now ruling below the Gold shipping point. The Bank of England has reduced the rate of Discount from 7 to 6 per cent., and an easier state of things is reported from the London market. Both the American and English Funds are better.

There is some tendency to easier Money here. The Banks are accommodating their mercantile dealers more liberally, although the Street rates for Money keep up to 9@12 per cent. per annum. The Stock Brokers are paying 7 per cent. for Money on call loan, and extra rates have ceased on the Exchange for the present.

The excitement in the Stock Market, growing out of the Northwest corner, noticed in our last report, culminated on Monday last by a general settlement of differences between the great Bulls and Bears in the Stock. Those differences are said to count by half millions and millions, on the basis of 125@150@200 per cent. for the Stock, which has now returned to 85@86 per cent. The success of this extraordinary movement has induced great caution on the part of the bearish interest in the market in selling the Railroads and other Stocks short, and during the week the opposite or bullish interest advanced prices, on the average, 2 per cent., as compared with our table of this day week.

The following are the comparative movements of the City Banks for the past fortnight:

	Nov. 23.	Nov. 30.
Capital	$88,019,200	$88,019,200
Loans	273,451,000	276,360,000
Gold and Greenbacks	58,010,500	60,116,700
Deposits	230,651,000	230,915,300
Circulation	27,376,800	27,570,000

Peanuts "	1,659	Dried fruits, pkgs	715
Pork, bbls	381	Cut Meats "	3,779

Beans and Peas.—The supplies of beans have been larger and there is considerable stock on the way. Prices are 20@25c. per bushel lower.

We quote Mediums, prime $2.75@2.80 per bushel; good do., $2.50@2.60; fair do., $2.00@2.25; prime marrowfats, $2.80@3.05; good do., $2.50@2.60; common and fair do., $2@2.25. Green peas at $1.80@1.90. Southern black-eyed peas, $2.70@2.75. Canada peas in bond, $1.12.

Beeswax.—Sales are principally of small lots to close out a few shipping orders, with prices unchanged. Sales at 31¾@31½c. for Western and Southern.

Butter.—Distributive buyers have been so busy with miscellaneous goods for Thanksgiving use that butter has not moved to any large extent. Still, the market for fine stock is very firm, and extra selected parcels of fresh will bring 36@38c., in the absence of full quality parcels. Good market goods are a little stronger in price, and as the weather will naturally favor their exhibition from this time forward, prices may not recede unless there is an unusual falling off in the demand that belongs to Winter months. There is a fair Eastern trade, but very little shipping. Rolls are in very good demand.

Orange Co. pails, fine, 36@38c; Penn. and N. J. pails, good to fine, 2½@35c.; common, 15@18c.; selections, half tubs, 33@35c.; half tubs in lots, 22@26c.; good to prime firkins, 27@29c.; do. Welsh, Pail, 27@29c.; Welsh tubs, fair, 20@23c.; other grades of State, 18@22c.; Western Reserve, choice, 21@23c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7½@8½c.; State dairies, tubs on, 29@32c.; do. all firkins, 28@30c. Rolls, choice, 21@23c.; do., fair to good, 18@20c.; do., common, 16c.

Cheese.—The position of the market is unchanged. Some few lots of September make are being worked off to the home trade at 14½c., but this is an unexceptional figure even for small lots. Shippers will not buy to any extent unless concessions are made, and our outside prices are paid only when an urgent order is to be filled.

We quote State factory, choice, 14@14½c.; good to prime, 13½@13¾c.; fair, 12@13c.; State dairy, 12¾@13¼ for good to prime; 10@12c. for fair lots; for Ohio factory, 10@11½c. for fair to prime; English dairy, prime, 13½@14c.; fair do., 11½@13c.

Cotton—Is lower under liberal arrivals at the ports. The trade is moderate.

We quote.

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16¼	16¾	16½	16¼
Good Ordinary	18¼	18⅜	18⅝	18⅝
Strict Good do.	18 7-16	18⅝	18⅞	19⅛
Low Middling	18⅝	18⅞	19⅛	19⅜
Middling	19⅛	19⅜	19⅝	19⅞
Good Middling	20¼	20½	20⅝	21

For forward delivery latest sales on the basis of low middling are as follows:—Nov., 18⅝c.; Dec., 18½c.; Jan., 18 11-16c.; Feb., 15 15-16c., March, 19¼c., April, 19½c., May, 19⅝c.

Dried Fruits.—In apples a deal of stock was pushed forward to this market, to meet the improvement caused by the little spurt caused by the shipping business, and we have now on sale a larger supply than needed, and prices have reacted. Unpeeled peaches have a light trade. Peeled sell in a jobbing way only.

Southern apples, 4@5¼c.; do. sliced, 7@8c.; Western, 5¾@6c. Peeled peaches at 14@15c. for Ga., 14@16c. for Va., and 16@19c. for North Carolina. Unpeeled peaches at 5@5½c. for quarters, and 5¾@6c. for halves. Cherries, 22@22½c. Plums, 14@19c. Blackberries, 9@9½c. Raspberries, 33@34c.

Eggs.—The supplies of fresh are insufficient and prices have been advanced; this helps limed stock

somewhat. We quote at 34@35c. for Western fresh, 35@36c. for Slate and Pennsylvania, 37c. for Jersey. Limed at 25@26c. for Western, and 26@27½c. for State.

Flour.—Prices have been advanced 15c. per bbl. There is a good inquiry for shipping grades and desirable lines are not plenty. Trade extras are in full supply and offered freely at former figures.

Fresh Fruits.—Receipts of apples are large, and many dealers are pressing stock on the market; there are others, however, who look for higher prices to rule, and are storing their best consignments. California pears arrive quite regularly. They include large Easter Beurre, Glout Morceau and Winter Nelis, selling in mixed lots at $5 per case. Louisiana oranges sell from the wharf at $6@8 ₱ bbl.

We quote—Apples, common, $1.25@1.75; do. fair to good, $2@2.50; do. fine, $2.75@3.25; do. lady, $4@8. Pears—Cooking, ₱ bbl., $5@6. Grapes.—Catawba, 8@10c.; Isabella, 5@7c. Cranberries, prime, per crate, $3.25@3.50; com. to fair, $2.50@3; bbls., $9@10.50; choice bbls., $11.50@12.50.

Grain.—In wheat, with canal navigation about closed, the trade find that they are carrying over very moderate stocks, and with a good shipping inquiry prices are higher. We quote at $1.50@1.55 for No. 2 Spring afloat, $1.60@1.61 for No. 1 Spring do., $1.63@1.68 for Winter Red Western, $1.70@1.77½ for Amber, and $1.76@2.05 for White. Rye is selling at 86c. for Western. Corn is lower, but closed with an active shipping trade, and prices were in the seller's favor. We quote steamer lots for Western mixed, 63@63½c. Sailing, do., 64@64½c. Oats are in light supply, with some speculative inquiry at 52@54c. for old mixed Western; 49@51½c. for new do.; 52@55c. for new White, 49@53c. for Black; 48@52c. for State.

Hay and Straw.—With indications of an early closing of river navigation the market here is unsettled, with a strong disposition to advance prices. We quote new shipping hay at $1.10; retail do., $1.40@1.75; salt, do., 70@90c.; clover, 80@90c. Straw at $1.30@1.45 for long rye, $1@$1.20c. for short rye; 80@90c. for oat.

Hops.—Prices are 3@5c. higher and the tendency is still to a better market. The reports from abroad speak of a large business both in England and Germany at a lvancing figures, with light exports for this market. Growers have held back their supplies. Brewers at this point find scarcely enough stock on sale to meet their wants from day to day.

New York, growth 1872, at 35@45c.; Eastern do., 35@42c.; Western do., 35@42c.; Yearlings '71 20@25c.; Olds '70 10@18c.; Old Olds, '68–69 8@10c.; Bavarians, 40@45c.; English, 33@40c; Belgian, nominal, 30@35c.

Poultry and Game.—The past Thanksgiving week has been lost to the poulty trade. The weather was unfavorable for stocking up, and the panic occasioned by the disease reports had not subsided to a degree that permitted grocery men and other retailers to supply themselves with the usual holiday liberality. Chickens were almost unsalable, and turkeys had to be placed at a low range for the season to sell in any important quantity. The supply was not large for Thanksgiving, but there is enough remaining unsold to last several days. Game, as before, sells quickly. Wild turkeys have a larger inquiry than ever before. Quail are abundant. Prairie hens quick. Venison is scarce, and prices have advanced. We quote prime N. J. and Bucks county turkeys, 17@18c., a few large and dry-picked at 20c.; State and Western, poor to best, 12@16c. Chickens, Western, 7@12c.; State and near points, 11@14c. Geese, 12@14c. Ducks, 11@13c. A great many lots of Western-dressed are frost-touched.

Game quotations:—Venison, whole, 12@14c.; do., saddle, 18@20c. Canvas-back ducks, $1.75@2.50; red heads, $1@1.25; mallard, 75@87c.; teal, 40@60c.; rabbits, 5@10c.; hares, 60@70c.; quail, $2. Prairie chickens, $1@1.50; partridges, State, $1@1.12; eastern, 70@80c.; wild turkeys, 22c.

Provisions.—The trade in mess pork, 1871 and '72 crop, has been almost exclusively confined to jobbing lots, with $15 the ruling price at the close. Now is quoted at $11.75 for Dec. Beef is quiet, after a few early sales of tcs. for export. Beef hams firm at $33@33.50. Cutmeats are low, in sympathy with cheap hogs. Pickled hams, 10@12c.; do. shoulders, 5½@5¾c.; bellies, 7½@8c., bulk.; 8c., boxed. Smoked hams, 12@13½c.; do. shoulders, 6½c. Bacon has sold largely for future delivery, the favorable selling prices having produced a heavy demand. Long mess, spot, 7½@7¾c.; short do., 7¾c.; Western, long and short (Winter), 7¾c. Tallow is steady at 8½@8¾c. for good to prime onlside, and 9c. for city. Lard is steady at 8 3-16c. for wooden hooped choice Western, cash, and 8½@8¾c. for Dec. and Jan. City dull at 7¾c. for No. 1, and 8@8¼c. for steam and kettle.

Seeds.—New clover is more plenty and down to 9@9½c. Timothy is quiet, at $3@3.25. Rough flax, $1.90@2.

Sundries.—Honey is in good demand at 28@30c. for dark and 32@35c. for white, in glass boxes; mixed lots, 21c. Cider at 6@10c. per gallon. Feathers, live geese, new, fine, per lb., 60@70c.; do. mixed, 40@60c.; hen, 7@9c.; vinegar, cider, ₱ gal., 20@25c.; do. manufactured, 15@20c.; newspapers, ₱ lb. 4@4½c.; white rags, 5@5½c.

Tobacco.—Stocks receive no important additions and the market is still in the seller's favor, with a good distributing business.

Carrots, ₱ bbl.	1 75	@	2 00

For potatoes in shipping order, add 25c. ₱ bbl.

Wool.—The business is fair from the trade and on speculation, but manufacturers do not buy beyond urgent requirements at the recent advanced prices. Ohio fleeces will bring 60@65c; extra pulled, 61@65c; super, 55@62c.

Whisky—is lower, with larger supplies. Western, 93c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Nov. 30, 1872.

THE market at Little Falls for the week ending Nov. 30th was brisk, with large sales of factory. In farm dairies the delivery was upward of 1,200 boxes, which sold at prices ranging from 13c. to 13½c. The factories were largely represented, the offerings amounting to upward of 9,000 boxes, from 5,000 to 6,000 of which have been sold. We give quotations of leading transactions as follows:

Avery & Ives	14	J. D. Ives	14
Bates	13⅝	Keys	14
Brockett's Bridge	14	Klock & Nellis	13¾
Brookman's Corners	13¾	Ladue	14

Cold Brook	14	Old Stone Church	13½
Crumb's Corners	13⅝	Shell's Bush	13⅝
Danube Cold Spring	13⅝	Snell's Bush	14
Eatonville	14	Stratf'd and Salisbury reported	14½
Freeman	13½	Top Notch	13¾
Henderson Associat'n	13¾		

There was a large delivery of butter, which was sold at prices ranging from 30c. to 33c.—the latter figure being for extra fancy brands.

We have advices from abroad up to the middle of November. Our London correspondent says there is an active demand for fine and medium American and English cheese. The best American is quoted at 70@72s. The other descriptions sell as follows:—English Cheddar, 75@84s.; Wiltshire, double, 66@76s.; Cheshire, medium, 56@68s.; fine, 74@80s.; Scotch, 70@72s. Dutch Cheese:—Edams, 60@68s.; Gondas, 50@58s.; Derbyshire, 58@61.

In butter there is a tendency downward, more especially for secondary sorts. Clonmells, 122@126s.; Corks, 124@128s.; Normandy, extra, 130@134s.; Canadian, 96@100s. The corresponding prices last year were for Clonmells butter, 133s.; Corks, 138s.; and for American cheese, 66s.

It will be seen from this that the foreign market at this time last year was from 4s. to 6s. lower than the present prices.

The weather in Herkimer Co., N. Y., during the early part of the week, was warm and pleasant, and cattle were getting a good picking of grass from meadows and pastures. The mild weather during November has saved a large quantity of hay in this section.

LIVE STOCK MARKETS.

NEW YORK, Nov. 30, 1872.

As is usual, Thanksgiving week, dealers in live stock give way to poulterers. True, it is charged that they thought to retain their trade by starting a diseased chicken story, but if the butchers and dealers were the authors of this hoax, they commenced it too soon, for before the holliday arrived people began to take courage, as no deaths were reported from eating sick chickens, and went for about the usual Thanksgiving dinner, and that would be incomplete without a turkey. The poultry trade was really seriously crippled up to near the holliday, and even then consumers had cheap birds. All kinds of live stock show a falling off in numbers and after a tough week, there is improvement foreshadowed, the sharply cold weather of to-day helping along. We look for a good trade during the coming week.

RECEIPTS OF LIVE STOCK

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,336	82	1,412	28,028	12,879
" last week	9,718	87	1,370	31,424	59,268
Average last year	7,187	88	2,301	25,133	25,177

Beeves.—It was a great mistake in sending so much trash here during a holliday week, when butchers always want to make a good show of fat beef, so as not to drive their customers to the poultry stands. One cause of the inferiority was owing to the fact that a portion of the droves were delayed stock intended for a former market, but kept back by snow blockades on Western roads. Besides this, our own State feeders cut loose, severe weather compelling them to go into Winter quarters or the market, and they chose the latter for such stock as would not pay to feed. There are a great many farmers in this State who buy up grass calves and other scalawag stock, besides what they raise themselves, turn it upon poor pastures, and run their chances of making something. Costing very little, the risk is light. One such lot of yearlings just sold here at $17.50 per head. Then some old dry cows went at 7c. per lb., or about $32 each. There were about 1,500 State cattle last week, which is an unusually large supply. Besides these, 2,850 came from Texas, and only 115 from Kentucky, where we look for the fat Durhams. Prime steers were wanted, and 13¾@14c. were paid readily when such was found. A few fancy went at 15c. for Thanksgiving beef, since which we have had nothing worth much over 13½c. The market has generally ruled dull, but now has a better look. And still there are a good many cattle ready to be rushed in, and caution will be necessary. State bulls are selling at 3¼@3½c.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ₱ lb	13¼ @ 14	14 @ 14¼
Good to prime	12¼ @ 13¼	13 @ 13¾
Medium	11½ @ 12	12 @ 12¾
Poorest grade	7 @ 10	7 @ 10
Average sales	12 @ —	12¼ @

Hogs.—After close one week ago, the market further declined, and has not recovered much since, though the cold weather of to-day is rather helping them. The first car of Western dressed arrived yesterday. They were from Ohio, of 212 lbs., and in good condition, selling for 5¾c. City dressed are quoted at 5½@6½c. as extremes, State and Jersey going at 6@8c. Live are worth 4¼@4¾c., 5 cars Ohio, 231 lbs. average, going at 4¾c.

Milch Cows.—The market is now tolerably well supplied, and trade quiet. Most of the call is from dealers, who take them about among the milkmen, sometimes going a short distance into the country. These dealers pay about $70 each, on an average, buying only good cows. When peddled out to milkmen, $80 are sometimes obtained. Then common milkers run down to $40@50. Milk has declined, with a surplus offering, and that injures the sale of cows.

Sheep and Lambs.—Farmers are sending in the tag-ends of their flocks, and get low prices for them, as 4c. for a car 60 lbs., part lambs at that. Common sheep are lower than they were last week, many selling at 4½@5c. Good flocks go at 5¼c., and fat sheep at 6c. Only extras reach 6¼@6½c. Most lambs are now counted in with the sheep. If by themselves, they are worth 6@7¼c. Trade dull, but slightly improving at the close. Some of the latest sales were a car 81 lb. coarse Ohio sheep, at 5c; a car 83 lb. Mich. fine wool, at 5¾c.; a car 63 lb. State, part lambs, at 4¾c., and a car 74 lb. Ohio sheep at 4¾c.

Veal Calves.—The market has been glutted with grass calves as never before, and we cannot call to mind such low prices. If weighed, they would be 1¾@2¼c. per lb., for large sales have been made at $3.50@5 each, viz., 44 at $3.75; 38 at $4.62½, and a large lot of 350 lbs. at $5. The very best live calves sell at 10c., with an occasional extra pen at 10½c. Good State calves are worth 8@9c. Hog dressed grass calves sold at 4@5c., and choice milk veals at 12@13c.

LATEST—Dec. 2., 4 P. M.—Beeves.—Arrivals to-day: 151 cars at Communipaw, 104 cars at One Hundredth street, and 50 cars at Weehawken, making 5,281 head on sale. They were largely of poor quality, and sold lower than on Friday, or at 6@10c. for scalawags to decent steers, and 11@15c. for fair to a few choice animals. Some Texan cows sold at $30 each.

Sheep.—Arrivals, 22 cars at Communipaw, 13 at Forty-eighth street, and 19 at Fortieth street, making 10,235 head on sale. Trade very slow at last quotations, the dead meat markets being glutted with low-priced mutton.

Hogs.—Arrivals, 65 cars at Communipaw and 79 cars at Fortieth street, making 15,687 on sale. After a stiff close at advanced rates, Saturday P. M., they fell off again to-day, heavy dressed selling at 5¼c.; medium at 5¾@6c., and pigs 6¾c. Sales alive were at 4⅝@4¾c.

SPECIAL NOTICES.

A Positive Radical Cure for Rupture.—The Elastic Truss Company, at No. 683 Broadway, New York, will send their Descriptive Circulars to any person afflicted with Hernia. This Truss can be sent by mail to any part of the country.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.
BY X. A. WILLARD, A. M.,
Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces 536 Large Octavo Pages, is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address
D. D. T. MOORE, Publisher,
5 Beekman St., New York.

New Publications.

Agents Wanted.

Agents Wanted for the
GOD'S SIX DAYS' WORK
Or, SCIENCE AND THE BIBLE.

This book gives the very cream of Science, making its thrilling realities, beauties, wonders and sparkling gems a hundred-fold more interesting than fiction. Every man, woman and child wants to read it. It is endorsed by the Press, and Ministers of all denominations.

GEO. W. EATON, D. D., LL. D., *President of Hamilton Theological Seminary,* says:—"The author has worthily conceived of the stupendous, amazing and overpowering splendor of the Divine Hand in Creation, and set forth his conceptions, in language of uncommon force, clearness and beauty. Its religious spirit is reverent, loyal, devout and fervent. It is worthy of all praise." Sales immense. Agents report 52—45—46—80—87 and 95 copies per week. Great inducements to Agents.

Employment for Young Men, Ladies, Teachers and Clergymen in every county. Send for Circular. Also, Agents wanted for the

Peoples Standard Edition of the Holy Bible,

Which, in addition to the sacred text, and all the important features of other editions, contains a "History of the Books of the Bible," an "Inter-Biblical History," a "History of all Religious Denominations," over sixty "Historical and Chronological Tables," arranged on a new basis, numerous full-page engravings, a handsome chromo Marriage Certificate, a Family Record, and A Gallery of 536 Illustrations and descriptions, embracing "An Illustrated Life of Christ," "An Illustrated Life of Paul," "An Illustrated History of Palestine," Illustrated Sketches of Jerusalem, Patmos and the Seven Churches, Egypt, The Exode, and Assyria; also, Illustrated Sketches of the Houses, Costumes, Arts and Sciences, Religious Rites and Emblems, Trees and Plants, Animals, Writings and Coins in Bible times. All our own Agents for other books, and many Agents for other Publishers, are selling this Bible with wonderful success, because it is the most valuable, beautiful, and popular edition now in the market, and is sold at a very low price. Fine bindings (of both books), for HOLIDAY PRESENTS. Canvassing books free to working Agents. Address ZIEGLER & M'CURDY, Phila. Pa., or Cincinnati, O.

Implements and Machinery.

Watch Buyers Attention

The undersigned respectfully call the attention of persons contemplating the purchase of Watches to the superiority of the celebrated Sickle Movements, manufactured by Messrs. BOREL & COURVOISIER of Neufchatel. Gents' and Ladies' sizes, key and stem winders, quarter-plate. These watches have Equilibrium escapements, chronometer balances, exposed ruby pallets, Breguet hair-springs and full ruby-jewelled, and combine all modern improvements in watch-making.

These Watches were awarded the Grand Prize at the Paris Exposition of 1867, and can be warranted to perform equal to those of the best manufacturers.

For sale by dealers throughout the United States, and QUINCHE & KRUGLER, Sole Agents for the Manufacturers. Salesroom, 15 Maiden Lane, N. Y.

"FAMILY FAVORITE!"

THE

WEED. WEED.

The most perfect, reliable and generally useful machine in existence. For the family of the farmer or mechanic, where the work required of a sewing machine ranges from the heaviest garments of men's wear to the most delicate and ornamental fabrics for ladies and children, it has proved itself thoroughly efficient and entirely satisfactory. Of unequaled simplicity and compactness of construction, capable of being learned and operated with one-fourth the usual expenditure of time and labor, with a capacity for quantity, quality and variety of execution beyond its competitors, and a reputation for durability and reliability known and appreciated by thousands, it is offered to the people for the most critical inspection and comparison, with confidence that its obvious merits cannot fail to convince the careful examiner of its superiority. Manufactured by the

The Herdsman.

THE CHILLINGHAM BULL.

THE Prince of Wales, while staying with the Earl of Tankerville at Chillingham Castle, Northumberland, Oct. 10th, spent a morning in the chase of the famous wild cattle preserved in that extensive park. His Royal Highness brought down the king of the herd by a single rifle-shot, his bullet entering the neck and severing the spinal cord. It was a fine bull, seven years old, and weighing seventy stone. We give an illustration of the head of this noble animal. The color of the head, body and limbs is white; the muzzle, hoofs and tips of horns are black. The breed, now extremely rare, exists, we believe, nowhere in England but at Chillingham; in Scotland it is to be found in the demesne of Cadyow, at Hamilton, on the Clyde. Sir WALTER SCOTT'S historical ballad, "Cadyow Castle," relating the flight of Hamilton of Bothwellhaugh, after the murder of the Regent MURRAY, has the following description:

"Through the huge oaks of Evandale,
Whose limbs a thousand years have worn,
What sullen roar comes down the gale,
And drowns the hunter's pealing horn?

"Mightiest of all the beasts of chase,
That roam in woody Caledon,
Crashing the forest in his race,
The mountain bull comes thundering on.

"Fierce on the hunters' quivered band,
He rolls his eyes of swarthy glow;
Spurns, with black hoof and horn, the sand,
And tosses high his mane of snow

"Aimed well, the chieftain's lance has flown;
Struggling in blood the savage lies;
His roar is sunk in hollow groan;
Sound, merry huntsmen, sound the prize!

The Prince of Wales, as we have seen, had a better weapon than the lance or spear to use at Chillingham; but the wild beast he slew there was one of the same kind as that which is described by Sir WALTER SCOTT. The head has been mounted as a trophy, by Mr. EDWIN WARD, naturalist. It stands boldly out from a shield of blue and gold, with a most successful effect.

Salting Farm Stock.—N. W. S. is informed that we believe it promotes, nay, is essential to the health of stock that salt be provided where animals can have constant and free access to it. It is well established by scientific investigation that such is the case,

NATIONAL CONVENTION OF SHORT-HORN BREEDERS.

THIS Convention was held at Indianapolis, Nov. 27. There was a large attendance, and most of the United States and Canadas were represented by prominent breeders. We have only space to give the results of this Convention. Out of it has grown an organization to be hereafter known as the American Association of Breeders of Short-Horns, organized under the following

Constitution:

The undersigned, breeders of Short-Horn cattle, for the purpose of encouraging and protecting this important interest, and to increase the average excellence and provide for the preservation and dissemination in its purity of this matchless breed for the improvement of American cattle, associate ourselves together in the following Constitution:

ARTICLE 1. This association shall be known as the American Association of Breeders of Short-Horns.

ART. 2. The officers of the Association shall be a President, two Vice-Presidents, Treasurer and Secretary, who, with one Director from each State, and organized society of the United States and of the Provinces of Canada, that may be represented by membership in this Association, shall constitute a Board of Directors, for the management of the affairs of the Association, subject to this Constitution, and such rules and regulations as the Association may from time to time adopt.

ART. 3. Any person engaged in breeding Short-Horn cattle in the States, Territories and Provinces before mentioned, may become a member of the Association by signing the Constitution, and paying the sum of $2, and shall be liable to pay such annual sums thereafter, not exceeding $2, as the Board of Directors shall prescribe; but all Agricultural Colleges, or associations breeding Short-Horn cattle, shall be entitled to one membership.

ART. 4. The officers and Directors first chosen shall be elected for the term of two years, and until their successors are elected, and the membership in each State, Territory and Province not represented at the first meeting may, by sending their names and fees aforesaid to the Treasurer, designate a Director for such State, Territory or Province, whose term of office shall expire at the same time as other members of the Board. The terms of officers subsequently elected shall be for two years.

ART. 5. The Board of Directors, of whom nine shall constitute a quorum, shall have power to call meetings of the Association at such times and places as they may deem necessary, but shall be required to call meetings at the time of the expiration of the terms of the officers, and shall also have authority to provide such rules and regulations as they may deem necessary for the protection of the public against frauds in pedigrees, and for the suppression of parties who may be guilty of the same. They shall likewise have power to provide for the publication of any transaction of the association, and to provide means for the payment of all expenses that may be incurred.

ART. 6. This Constitution may be amended at any regular meeting, called for the election of officers, by a majority of two-thirds of the members present.

This Association elected the following

Officers:

President—Dr, A. C. STEVENSON of Indiana.

Vice-Presidents. — William Warfield of Kentucky and Hon. David Christie of the Province of Ontario.

Secretary.—B. F. Campbell of Illinois.

Treasurer.—John G. Dunn of Ohio.

Board of Managers.—R. R. Seymour of Ohio; W. R. Duncan of Illinois; E. G. Bedford of Kentucky; Dr. Manly Miles of Michigan; George Murray of Wisconsin; Claude Matthews of Indiana; Samuel Campbell of New York; J. H. Bacon of Iowa; C. T. Quisen of Missouri; C. E. Coffin of Maryland; Josiah Fogg of Massachusetts; Stephen White of the Province of Ontario; M. H. Cochran of the Province of Quebec; W. S. King of Minnesota; Mark S. Cockerill of Tennessee; Geo. W. Glick of Kansas; E. L. Emery of Nebraska; C. W. Howard of California; Warren Percival of Maine, and D. L. Pratt of Vermont.

HEAD OF A CHILLINGHAM BULL.

Resolutions Adopted.

Resolved, That for the better management of the American Herd-Book in the future, the Convention makes the following recommendations:

Resolved, That, in the record, the name and address of both breeder and owner shall be given, together with the date of birth and the color of the animal.

Resolved, That the ancestry of the animals should be traced on both sides to imported animals before they be entitled to registry; or to those heretofore recorded in the American Herd-Book, save those with pedigrees not false or spurious, before they can be entitled to registry.

Resolved, That family names ought to belong to the breeder first claiming that name in some agricultural paper of the United States or Canada, or the Herd-Book.

Resolved, That the person under whose direction the animals are coupled should be recognized as the breeder of the produce.

Resolved, No females shall be entered in the Herd-Book until they have produced a living calf, except as the produce of the dame and sire. Lost.

Resolved, That a committee shall be appointed by the President and Directors of this Association, whose duty it shall be to examine all pedigrees charged by any member of the Association as errors and forgeries, or believed by them to be errors and forgeries; and, when decided to be wrong, that the fact be published in a chapter of errors, to be attached to each succeeding volume of the Herd-Book.

Resolved, LEWIS F. ALLEN be requested to continue the publication of the American Short-Horn Herd-Book in accordance with the above recommendations.

Resolved, That Mr. ALLEN be requested, in recording pedigrees sent by one breeder, that, when quite a number are recorded, of the same pedigree, in one volume, the first shall be recorded in full, and that those following be abbreviated by reference to the first.

Resolved, That we recommend to all Agricultural Societies to employ only experts as judges, and to pay their expenses to and from Fairs, and while in attendance thereon.

Resolved, That the President and Directors of each Agricultural Society are, in the opinion of this Convention, the proper persons to appoint judges, and should be held responsible for their fitness.

Resolved, That the practice of many societies of prohibiting consultation among judges is unfavorable to the making of correct awards, but we think the most satisfactory results may be attained by balloting first and consulting afterward.

The Committee on Veterinary reported the following, which were adopted:

Whereas, The General Government of the United States has made large and liberal appropriations to the respective States for the establishment of Agricultural Colleges: and

Whereas, The live stock interest of the country is of vast and growing importance, and entitled to its just share of such appropriations with other agricultural interests; and

Whereas, Comparatively little is known of the diseases of domestic animals, and their treatment and cure; therefore,

Resolved, That we, the breeders of Short-Horns, recommend the establishment of an efficient Professorship of Veterinary Practice in each Agricultural College; and that said Professorship receive a liberal endowment from the college fund.

Resolved, That we invite the breeders of horses, and the breeders of other domestic animals, to unite and co-operate with us in promoting this object.

Fattening Breeding Animals for Exhibition.

On this subject, judging by the record before us, there was a good deal of lively discussion and some hedging. As indicating the temper of the Convention we give the resolutions introduced on this subject. We have no report as to which was adopted. If we find out before we go to press we will append it. We give them in the order of their introduction by different parties:

1. *Resolved*, That in order to maintain the present excellence of Short-Horn cattle, and bring them up to still greater perfection, it is necessary to feed the animals freely, especially while young:—that, while we think it is unquestionably injurious to allow the animals to become poor, or even thin, we think it also injurious and dangerous to the fertility of animals, especially bulls, to feed them with corn or other heating grain, during the whole year so as to keep them in very high condition. We think judges at fairs should discourage excessive fat in Short-Horn animals as much as possible.

2. *Resolved*, That it is the sense of this Convention that the practice of high feeding of animals, for show purposes, is an evil that is detrimental to the breeding qualities of both male or female, and would recommend a modification of the same as far as possible.

3. *Resolved*, That, in the estimation of this Convention, the practice of over-feeding animals for show purposes is one not to be encouraged, and that the officers of agricultural societies be recommended to so frame their premium lists as to offer premiums only for animals in breeding condition.

4. *Resolved*, That, in the opinion of this Convention, it is not only necessary, in the successful breeding of Short-Horn cattle, that we should secure animals of fine form, pedigree, etc., but that they should be well fed and cared for:—at the same time, we look upon the practice of keeping up cattle without exercise, and feeding them to the utmost capacity, for the purpose of sale, as injurious to their health and usefulness as breeders.

The Status of Cattle.

The following definition of the different classes of cattle was adopted:—Pure breed, full blood; thorough-bred animals of a distinct and well defined breed without any admixture of other blood. Cross-bred animals:—Produced by breeding together distinct breeds. Grades:—The produce of a cross between a pure-bred and a native. High grade:—An animal of mixed blood in which the blood of a pure-bred largely predominates.

Dairy Husbandry.

LIMBERGER CHEESE.—I.

A FEW years ago Limberger cheese was imported into this country to supply the wants of our German population; now all, or nearly all, of this character of cheese needed here is produced in the United States, and the greatest bulk of it is made in the State of New York. Extensive dealers in the article, with whom we have conversed, as well as those who are furnishing it directly to the consumer, say that American Limberger is far superior to that made in Germany, and that an imported

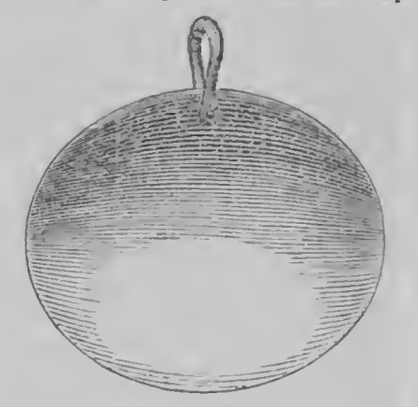

FIGURE 1.

cheese could not be sold here in competition even though the price was made the same as that for American. One reason for this, we suppose, is that Limberger requires to be eaten when ripe, and that it rapidly deteriorates, or is liable to deteriorate, when over-ripe, and thus fresh supplies from the factories give better satisfaction than that which is imported.

It must be evident, too, that there is really more system, not to say science, in the manufacture of Limberger at the factories of America, than in the small farm dairies of Germany. Hence we see a very good reason why American Limberger should meet with favor among the lovers of this kind of cheese.

Characteristics.

But some of our readers may ask—What *is* Limberger? and what are its peculiarities? It is a small, flat, brick-like cheese, about five inches square by two and a half to three inches thick, and weighing, when ripe, about two pounds. The shape varies, however, from a square to oblong. Its most distinguished peculiarity, when considered in prime condition, is its odor, which is intensely strong, rank, approaching, if not quite, that of putrid animal matter. Even the Germans who have, from long use, been educated to like Limberger better than any other kind of cheese, admit that it smells badly. The cheese under the tongue is soft, salvy, extremely rich and buttery. To most American palates the flavor would be regarded as too rank, with something of a taint little less disagreeable than its odor. Still, when eaten earlier in its maturity than that required by the German taste, or before it has begun to smell badly, the flavor is mild, and the cheese is excellent. We have eaten Limberger in this stage of development and found it perfectly delicious, being sweet, mild and full of meat.

Extent of Limberger Manufacture in New York.

We have remarked that the great bulk of Limberger is produced in the State of New York, though how much is made in other States we have not the statistics at hand to show. An idea of the extent of the business in some of the counties of New York will be seen from the following figures, given us by Mr. ANDREW P. BALTZ, who handles large quantities of this cheese annually. He states that Jefferson county alone has 7,418 cows furnishing milk for Limberger manufacture. In Lewis and Oneida counties there are over 1,700 cows, the milk of which goes to make Limberger cheese, while in Wayne and Onondaga there are factories employed in making this character of cheese. In Jefferson county Mr. BALTZ himself has twenty-eight factories making the cheese. Besides these and other factories there are quite a number of farm dairies engaged in the manufacture.

Baltz's Operations, and Where the Cheese Goes.

Mr. BALTZ manufactures and purchases for shipment about one million of pounds of Limberger annually. He ships to New York city, to Louisville and St. Louis, and to other cities, South and West, wherever there is a large German element. The price now, of Limberger at the factory, is from 10½c. to 11½c. per pound; but during the war, and after, the prices were much higher, sometimes as much as 28c. per pound. Then large sums were realized in making Limberger cheese.

Method of Manufacture.

About the middle of September we visited, among others, one of the factories of Mr. BALTZ situated in the town of Pamelia, Jefferson Co., N. Y., a few miles from the City of Watertown. This is perhaps one of the most complete establishments of the kind in this country. The cellar alone cost over $6,000, and is excavated out of the lime rock, the top being arched with stone. The arch is 18 feet from the solid limestone bottom. The dimensions are 100 feet by 25 feet. Here the cheese are packed and stored until ready for shipment. The manufacturing department is constructed in a similar manner, but is smaller in size. The milk of about two hundred cows comes to the factory, and cheese is made twice a day—morning and evening. As soon as the milk is delivered it is strained in the vat and raised to a temperature of 96° Fahrenheit, when rennet is added sufficient to coagulate the mass in about 30 minutes. The coagulated milk is then cut crosswise of the vat with a gang of steel curd knives, and in about five minutes after it is cut lengthwise of the vat. It then stands a few minutes, when it is worked with two tin shovels, made slightly concave. They are about 13 inches wide by 9 inches broad, with rounded corners like the accompanying figure (Fig. 1). The shovels are worked, one in each hand, and the curds gently turned and cut for the space of three minutes, when it is left at rest for about five minutes, and the shovels again used for three minutes, and so alternately for an hour. After the mass has been left at rest from ten to fifteen minutes for the whey to settle, and if the curd is of the proper texture and consistency, which is determined by its appearance and feeling, the whey is begun to be removed. For this purpose a deep, pan-like vessel, pierced with holes, is used. It is pushed down into the mass, and the whey flowing through the holes fills the vessel and is then dipped off. About two-thirds of the whey is thus removed, when that which remains is left to be mingled with the curds which are now ready for the molds. The molds are 2 feet 4 inches long, 6½ inches wide by 7½ inches deep (measured on the outside and including the thickness of the boards of which they are made), and are divided up with partitions so as to make five cheeses, each five inches square. The molds are pierced with holes 1½ inches apart for the whey to escape, (see Fig. 2.) and when the whey has passed off and the curds settled together the cheese will be about 3 inches thick.

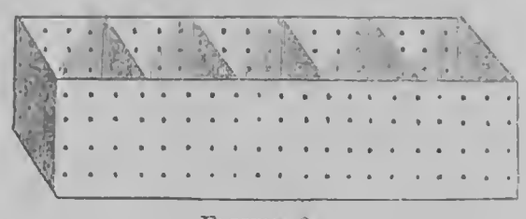

FIGURE 2.

The curds, mingled with whey, are dipped into the molds, each compartment being filled, when they go upon the table to drain; after standing about eight or ten minutes, they are turned bottom-side-up, the square forms of cheese resting on rye straw, which is spread thinly on the table to facilitate drainage. In this condition, or with the molds still covering the cheese, they remain three-quarters of an hour, when the mold is taken off and the cheese laid upon the table with strips of board separating the cheese, the one from the other, in order to preserve the form. The cheese are now about two and a-half inches to three inches thick, and the tables are slightly inclined, so as to facilitate a drainage of whey. After standing upon the tables two hours, they are turned over and remain from three to four hours, when they are turned again, and in three or four hours turned for the third and last time in this part of the process.

They then go to the salt table, where they are salted morning and evening for four days. In applying the salt it is rubbed with the hand on the edges and top side only of the cheese, and placed in tiers two or three cheeses deep. That is, on the second day as they are salted, they are put two cheeses deep and on the third day three cheeses deep, and so on until the salting is completed. They then go to the curing-room, and are to be set on edge and are placed close together.

JOHN G. KUDER is the foreman at this establishment, and he has had fourteen years' experience in manufacturing Limberger cheese. We shall have something to say on the curing and packing in a subsequent article.

The Horseman.

THE HORSE EPIZOOTY—DISTEMPER.

WHEN the horse disease first made its appearance I felt somewhat alarmed, as I have a stable of valuable horses. The disease finally reached my neighborhood and finally my stable. One stallion and two other horses commenced coughing. I adopted the same treatment I have practiced in horse distemper for forty years, and have always broken it up with but little sickness. It never breaks in the head nor outside. My three horses have not been what you may call sick; they have coughed about eight days a little. My other stallion and brood mares have so far escaped. I gave them of salt three parts and sulphur one part. I think it a sure preventive. My treatment when the horses commence coughing is, give one tablespoonful of saltpeter and as much antimony as can be put on a two cent piece, twice a day for two or three days, in a bran mash, wet with hot water; afterward once a day is sufficient for a few days; blister under the throat with a liquid blister—one-half ounce cantharides; one ounce oil origanum; one and one-half gills oil. Apply twice a day the first day; then once a day for two days. This blister is very important in either case—the horse distemper or this epizooty. I contend both diseases are closely allied.

I give water with the chill taken off to avoid chilling the horse; no exercise to speak of until the horse has about stopped coughing. I then use them as usual. This medicine drives the disease out of the system into the water. My horses have not been relaxed a week.

In regard to smoking horses with tar, leather, etc., I disapprove of it for this reason:—I cannot stand the smoke myself, and a horse will not if he can avoid it; nor do I see any good reason for, or result from, the practice. If any one thinks his horse is badly choked or filled up, let him smoke with saltpeter and a little sulphur. The man is benefited by this; why not the horse? This I have never seen recommended by veterinary surgeons. E. BOND.

Canastota, N. Y.

HORSE DYING FROM EATING CORN.

The information I seek is concerning a young horse which died only a few days since belonging to one of my neighbors. The colt was about four years old, had always been healthy, never having refused a meal. On Saturday night, after 9 P. M., the colt got into the corn crib, shelled the corn off from about eighty ears of corn and probably ate about one peck of corn. The owner discovered early in the morning what had happened, and found the colt suffering very much. He at once drenched the colt with about one pint of lard, in the absence of anything better. It did not seem to do any good, he then sent and got one quart of linseed oil and gave that with a little turpentine—say one-half gill—but all to no good. There would occasionally a ball, mixed with a slimy substance, pass from the colt; but it had no regular passage all day. It died early Sunday evening, seemingly choked to death. We opened the colt Monday morning and of course found a large amount of corn in the stomach and intestines; but it had, to our utter surprise, been perfectly masticated. Now we wish to know what more could have been done than was done for, and what killed the horse. Would it have been advisable to give croton oil? If so, how much?

Farm Economy.

FARMER GARRULOUS TALKS.

Mixed Husbandry.

I READ a speech made to the young farmers of Maine, the other day, by Col. WM. SWETT, in which he said he did not believe a farmer could make money on mixed crops, but thought that to succeed to the fullest extent he should pursue some specialty—depending, somewhat, on his location and circumstances. Now, Mr. Editor, I am not opposed to specialties in farming. I believe every farmer should strive to excel in the production of some one crop or class of animals, at least. But I do not believe that it will pay the ordinary farmer to select any one of the staple crops as a specialty and grow it alone, year after year—say wheat, or corn, or potatoes, or any other one crop.

The most independent and successful farmers I know of are those who grow a diversity of crops, and always have something they can put on the market at prices that will pay. They are thus sure of an income of some sort. One who makes a specialty of hop-growing altogether, may make double as much per acre with this crop, this year, as his neighbor averages; but it may not be so next. He may lose his whole crop by some disaster, and then, sir, where is his dependance? You say the surplus of the present year's crop! Aye, *if he has saved it!* But there's the rub! Don't every farmer, nearly, double his expenses when his income doubles? Or does he not say, "If forty acres produce me so much income, eighty will produce me double, and I'll double it." So more land is bought, or prepared, if owned. The expense of preparation and cultivation next year is doubled. Then comes disaster, and his one success with a specialty has ruined him. Haven't you seen hundreds of such cases? Haven't I? Yes, sir!

I tell you, sir, it is pleasant to make a heap of money in a lump; but then it goes quick and it is far pleasanter to feel secure. If the dairy business does not pay, then the small flock of sheep will help fill out the deficit; if the potato crop is short, a few bushels of beans are a substitute; if hay is scarce and high, a cellar full of roots and a barn-loft full of cornstalks keep the stock; if wheat fails, barley, rye, buckwheat and corn will furnish the bread; and so I might go on. But do not suppose I am in favor of these do-nothing, mixed farmers, who know nothing and care less about the economical management of a farm and the rotation and succession of crops in such a manner as to make each a success and minister to the success of the other. The more grain and grass and roots and fruit grown on a farm the more stock can be kept; and the nearer the stock eats up the grass and grain and roots, the more of these crops can be grown—not that I would not sell grass, or straw, or anything else off a farm if I thought I could make more money by doing so than by feeding it. But I should be *sure* that I could, and take into account not only present cash receipts but the possible future demands upon them to supply what I had sold.

No, sir! Again I say that is a vicious doctrine to teach the young farmers of Maine, or any other State. Illinoisans and Iowans will only believe it when corn is $1.50 and wheat $2.50 per bushel. Other years they'll not believe it—this year especially, in the matter of corn. Why, sir, the corn growers of the West are divided into two equal factions. Each faction is waiting, watching and hoping to see the other burn up its corn for fuel so that the half the corn left will quadruple in value! That is one of the advantages of having a specialty in farming—or disadvantages, rather. If a farmer determines to have one, let him choose one that no one else has chosen, if he can.

FARMER GARRULOUS.

AMMONIA IN SOILS.

Is it any advantage, permanently, to soils, that the roots of plants penetrate deeply into them? If not, why plow deep? Why not let the roots remain near the surface, where they can feel the influence of the sunlight, and absorb and use the manure incorporated with the soils?—P. V. S.

AMMONIA is one of the most valuable fertilizing substances, because it furnishes plants a large proportion of their nitrogen; and our correspondent may or may not be aware that nitrogen is a very essential element in the production of plants and the perfection of the seed. It forms from ½ to 4 per cent. of the composition of plants in a dry state; 1,000 lbs. of dry red clover hay contains about 21 lbs. nitrogen; of potatoes, 15 lbs.; of wheat, 23 lbs.; of wheat straw, 3½ lbs.; of oats, 22 lbs.; of oat straw, 4 lbs., etc., etc.

Now, ammonia consists of fourteen parts nitrogen and three parts hydrogen, by weight; it is largely produced by the decay of vegetable substances in the soil, for when they penetrate and fill the subsoil with vegetable matter, and it decays in a confined atmosphere, the hydrogen they contain combines with the nitrogen of the air which may reach them, and thus form, ammonia, which is absorbed by the humic and ulmic acids in the soil, thus rendered soluble, and enters into the roots of living plants.

This manner of securing nitrogen to plants is a very important one; for at every point in the growing shoot and root, all agricultural chemists agree nitrogen must be present—that is, at every stage of the plant's growth and development, from the point of germination to the perfection of the seed, it must be supplied in some form or other. And the more fully the supply corresponds to the requirements of the crop, the more nearly perfect and compensatory is the crop.

In stiff clay soils, in which there is little humus, the roots of plants help to supply ammonia to the soil; where there is an abundance of nitrogen near the surface, roots do not penetrate the soil; and it is because clover roots thus go deep in stiff soils that it is an excellent fertilizing crop. Plowing deep, even in stiff soils, does not always insure the deep penetration of it by the roots; for roots seem to require resistance in their downward course, and one often finds a clover or oak root going deepest in the stiffest soil and one that has never been stirred. The object of deep plowing is not so much to induce the roots to go deep, as to aerate the soil, allow the water to percolate through and give up its gases to it, and to prevent evaporation at the surface which so cools the soil as to retard the germination and growth of plants.

Field Crops.

SOUTH CAROLINA FARMING.

As illustrative of what can be done in the pine barren hills of this section, I send you a statement of the products of a farm six miles from our town, in a district usually classed as poor lands, as given to me by the farmer last week:

20 acres rented to negroes produced 10 bales cotton, 450 lbs. each, which sold at 18c. per lb	$810
45 acres produced 30 bags (450 lbs. each) sold at 18 cts. per lb	2,430
75 acres in corn and peas, 750 bu. corn	750
3 tons peas and pea haw	120
2 tons fodder (corn leaves)	40
30 acres in wheat, 200 bushels, sold at $2	400
45 acres in small grain pastured to cattle.	
Cattle sheep and truck sold	300
Value of cotton seed for manure	150
Total, 210 acres	$5,000
CONTRA.	
Laborers' portion on the 20 acres rented	$605
Laborers' portion on balance ⅗ of cotton, corn and peas	1,100
Cash paid for 3 tons guano	210
Cost of feeding horses, $162.50, and other cash expenses $112.50	585
	$2,500
Farmer's profit	$2,500
Cash received for ginning 125 bales of cotton for neighbors, $4 per bale	500
Total	$3,000

In 1867 this young man, owning a tract of land having only forty-five acres of open land, purchased an adjoining tract having the same amount of open land for $3 per acre. After paying for the land, he had but $500 cash to build houses, procure stock and implements, and support his family until a crop could be made. His capital at the commencement of this year may be summed up as follows:

700 acres land at $3 (210 cleared)	$2,100
Cost of houses, gin, etc.	2,000
Value of stock, viz., 2 mules, 1 horse, 13 sheep, 12 hogs, and 25 head of cattle	1,000
Value of farming implements	400
Value of corn, fodder, etc., and cash as commercial capital	1,000
Total	$6,500

His receipts for his portion of the articles sold, etc., were as follows:

Cotton	$1,822 50	
Wheat	400 00	
Stock	300 00	
Ginning cotton	500 00	
		$3,022 50
Less paid for guano	210	
Less paid for sundry expenses	112 50	
		$322 50
Total		$2,700 00

Besides having in his barn a supply of corn, peas, fodder, potatoes, &c., for the ensuing year, and a large quantity of cotton seed for manure.

Of the 210 acres cultivated, twenty acres were rented to some negroes for one quarter of the product, and the balance worked by himself and five negroes, the compensation of the negroes to be one-third of the portion produced on the land worked by them, the farmer to find the stock and the negroes to feed themselves. The soil is about an average of our pine barren lands and the climate as healthy as any part of the United States.

It will be noted that on the rented land the product was a half bale to the acre; whilst on the lands worked by himself and hands it was two-thirds of a bale. Other farmers of this vicinity have made as much as a bale to the acre, and in one instance 27 bales were made on twenty-two acres. At present prices a bale of cotton (450 lbs.) is worth $80. What product of the West brings $80 to the acre?

Near the farm referred to are thousands of acres of heavily timbered land of a like quality which can be purchased at from $2 to $3.50 per acre; $2,700 in cash (beside the reserve of corn fodder, cotton seed, etc.,) was realized from 210 acres, or over $12 per acre. What would be the value of lands in your State returning this sum to the farmer? While cotton pays so well is it surprising that this culture engrosses the attention of our entire people? At 16 cts. a pound a crop of 3,500,000 bales would put over $250,000,000 in circulation in the South.

I have often heard Northerners express their surprise that lands apparently so barren should produce such results; and some who attempted to farm after a short trial have returned home utterly discouraged. They do not understand how to adapt themselves to existing circumstances. Many expect to find the alluvial soils and hot climate of the lowlands in our middle and highland regions; and as a general rule Northerners complain bitterly of the cold weather of this vicinity in Winter.

The usual crowd of invalids and visitors to Aiken are now beginning to arrive, making the place look much more lively than it did a few weeks since. Among the number are many familiar faces of those who come annually. Each year the reputation of Aiken as a health resort is increasing, and it is confidently anticipated that the number of visitors this season will be larger than ever. Should any of your readers think of coming South during the Winter, tell them not to neglect bringing their furs and wrappers, for occasionally they will need them.

E. J. C. W.

Aiken, S. C.

DIGGING POTATOES.

I would say a word to the readers of the RURAL (although it is out of season) in regard to digging potatoes. It is not necessary to have a regular potato "digger," although there are some that look as though they might do the work well. Just take a common plow and run it right through the center of the row as near as possible, and you will find three-quarters, or more, of the potatoes will be left in sight, you need two boys to pick up and two men to go behind them with potato hooks and just haul the loose dirt over to get at what are left, which will not be many, if the plow is properly held. This is done where they are planted in drills; it leaves the potatoes in a great deal better condition than where they are digged out of the hard ground with the hooks; for in this way scarcely any of them get picked with the hook.

In regard to digging roots, such as turnips, beets, etc., I do not believe anything better than the hands will be found, for this reason, that almost always such roots have to be knocked together to get the dirt off of them. I should think a machine might be made to dig flat turnips with; but it would have to work well to do the work as fast as two men would. Two of us pulled fifty bushels this season in less than half an hour, which, I think, is getting them out about fast enough.

A. S. NASH.

FIELD NOTES AND QUERIES.

Pennsylvania Premiums on Corn Crops.—The Germantown Telegraph says: "The Chester County Agricultural Society having offered premiums for the best one acre and five acres of Indian corn, have awarded them as follows: J. W. Cox, 89.16 bus. on one acre; William A. Cloud, 118.63 bus. on one acre; Baldwin Gray, 93.51 bus. on one acre; same, five acres, 91.3 bus. per acre; Charles M. Griffith, five acres, 111 bushels per acre; E. B. Darling, five acres, 92.4 bushels per acre. For seventy pounds on the cob fifty-six lbs. of shelled corn or one bushel were allowed. *All the crops were estimated after husking a few shocks.* We put little faith in these estimates, however honestly they may be made. *We want actual yields.*

The Swine-Herd.

POLAND-CHINA HOGS.

THE following is the report of the Committee on Poland-China hogs adopted at the recent National Swine Breeders' Convention, the name Poland-China being retained:

The history of the breed of swine known as the Poland-China is as follows:

In the early history of swine breeding in the Miami Valley, Ohio, it is clear, from the best written authorities available, and from oral testimony, that there were two breeds, which to a great extent had been profitably crossed with the common bristled breed of the country. These were the Russia and Byfield breeds. The Bedford breed is also named in connection with the other two. To what extent it was used cannot now be readily determined.

In 1816, we have positive proof from an unquestioned source, that the Shakers of Union Village, situated in Warren Co., Ohio, and being four miles from Monroe, in Butler Co., purchased at Philadelphia *one boar* and *three sows* of what was at the time believed to be pure China. They were represented to be either imported or the immediate descendants of imported stock. They were called "Big China hogs." These animals were the first China hogs ever brought into Southwestern Ohio. Subsequently other China hogs were introduced and extensively used.

The Shakers and other judicious breeders in Warren and Butler counties, continued to use the breeds at command, and produced by repeated crosses a hog of exceeding fine qualities, for that period, which was generally known as the "Warren County Hog." These hogs continually increasing in good qualities, were bred in both counties, and the very best specimens were carefully and interchangeably used, so as to make the best crosses.

Such was the progress that had been made in forming the ground work of a good specimen of a hog. This condition of the breed continued until about the year 1835 or 1836, when Mr MUNSON or BEACH of Warren county, first introduced the Berkshire, which were obtained from C. N. BEMENT of the State of New York; other lots of Berkshires continued to flow into the Miami Valley until about 1841,

The Berkshire blood was liberally infused into the stock existing in, not only Southwestern Ohio, but in Kentucky also. Crossing with the Berkshires was almost exclusively done until about 1838 or 1389, when Mr. WM. NEFF of Cincinati, imported some choice specimens of the Irish Grazier. This breed soon grew into high favor, and as a consequence, was liberally used in making crosses with the best specimens of the crosses previously made. This intermingling of blood, this crossing of breeds, continued for some time. In a few years, however, the use of the purer blooded Berkshire was entirely discontinued, and there were no further importations made of the Irish Grazier. The breeders of swine in the Miami Valley settled down to the conviction that the basis of a good breed of hogs had been established, and that in the future judicious and discriminating breeders could use, and if necessary modify, the material furnished, so as to meet the highest demands of the public. For more than thirty years no new blood has been introduced into our breed and no effort made to obtain a new supply of the blood of either breed previously used.

While this is true, our breeders have not been indifferent to the further improvement of our breed. Stimulated by their success, they have perseveringly aimed to improve what they have been so successful in forming. The best points or qualities have been preserved, and where practicable, have been made even more excellent. All defective points or undesirable qualities have been corrected or improved by the care, skill and judgment of our experienced breeders.

Thus, we have a breed thoroughly established, of fixed characteristics, of fine style and unquestioned good qualities, which can be relied upon for the production of a progeny of like qualities and character.

The following are presented as the characteristics of the foregoing breed:

The best specimens have good length, short legs, broad, straight backs, deep sides, flanking well down on the leg, very broad, full square hams and shoulders, drooping ears, short heads, wide between the eyes, of spotted or dark color; are hardy, vigorous and prolific, and when fat are perfect models all over, pre-eminently combining the excellences of both large and small breeds,

J. M. MILLIKEN, Chairman.

The Naturalist.

FUR-BEARING ANIMALS—IX.

THE MUSKRAT.

Fiber Zibenthicus.—LIMR.

THE Muskrat abounds in the regions of North America between the 30th and 60th degrees of latitude, except in some portions of the Southeastern States. The body of a full-grown animal is about fifteen inches long; tail ten inches. The body is thick and round, with a short head and indistinct neck; incisors large; eyes small, lateral; ears short, and hidden by the fur; thighs hidden in the body; legs very short, so that when the animal walks the body touches the ground; legs and feet covered with short, shiny hair; hind feet with toes flattened and partly palmated; soles and toes margined with rigid hairs; claws strong; tail large, flattened laterally, larger in the middle, tapering to a point at extremity; it is covered with small, brown scales, interspersed with short, black hairs. The peculiar secretion which gives this animal its name, is found in glands at the root of the tail. This musky fluid is more abundant in Spring than in the Fall. The whole body is covered with short, downy fur, intermixed with longer and coarser hairs; its skin somewhat resembling that of a beaver.

When viewed from above it appears of a general dark-brown color with a reddish tint on the sides and legs; under-surface ashy; incisors yellow; nails white. In color it so nearly resembles that of the muddy banks it frequents, as often to be mistaken for a lump of earth. Individuals are sometimes of a cream-color. A friend of mine, in trapping one season, caught three or four of this description in a catch of two or three hundred.

The Muskrat is an aquatic animal, its stout tail and muscular hind legs furnishing it means of locomotion in water, from which it is protected by its thick, downy fur. Its movements on land are slow and awkward, and with its tail trailing on the ground and feet wide apart, it makes a singular track; if in snow or mud the mark of its low-set body is seen. Along swift streams and by clear water Muskrats live in burrows; but in marshes and ponds and along sluggish streams they build houses formed of sticks, rushes, leaves of the arrowhead and pond lily and other aquatic plants, which they stick well together with mud. In the center is a comfortable chamber, entered only through a hole from below the surface of the water. This is the winter home, more than one family building and occupying the same house. Near by in the bank is a burrow with numerous and extensive galleries, to which they retire when driven from their houses by hunters, or flooded out by high waters. These burrows always have their entrance under water, and sometimes are rods in length, though at no great depth below the surface of the bank. The house when completed is three or four feet above the water, and looks like a small hay cock. If destroyed by hunters, the repairs are begun the next night and proceed so rapidly that the dwelling is usually restored by morning. The houses are usually washed away by the high water in the Spring and are rebuilt every season.

The Muskrat is chiefly nocturnal, though in the day it is not uncommon to catch a glimpse of it as it moves rapidly through the water, or dives suddenly to the mouth of its hole. It feeds in Summer upon the leaves of various water plants, the arrowhead being an especial favorite, and sometimes, wandering on the land in quest of food, it eats grasses, and if found convenient, it relishes Indian corn, melons and other garden vegetables. It consumes great quantities of muscles in some of our rivers. Collecting them from the bottom, it carries them in its teeth to a log or stone, where, sitting upon its haunches and grasping them in its forepaws, it skillfully opens the shell with its incisors. The greatest injury it commits is by burrowing in embankments formed to confine water, mill-dams being often much damaged in this way. During the Winter, several families live in the same house, but when warm weather comes on, they pair and take to their burrows, where they rear their young, of which they have from three to six in a litter, and not unfrequently three litters in a season.

The Muskrat is courageous when attacked, males often have fierce battles with each other. Its chief enemies in water, are the mink and the otter; upon land, it is captured by various mammals and rapacious birds. When flint guns were used it was almost impossible to shoot one while in the water, so instaneously do they dive upon the slightest alarm; but they cannot do this quickly enough to escape the percussion gun, at medium range and with heavy shot or a ball.

THE MUSKRAT.

The Muskrat is one of the easiest of animals; to entrap, and is caught in the *box-trap* and dead-fall*, but oftenest in the common steel-trap. The proper time to trap them is from the middle of February or first of March, to the middle of April. The fur is then prime and the rats are full grown. The traps are set on logs, lying partly in the water, on which is seen the "sign" or excrement of the rats, which resembles that of the Norway rat, only that it is larger, on bogs, on "feeding beds," which are formed by the rats of sedges and water plants and on which they sit to feed, and also in their burrows. When set on a log, the trap is placed in a notch cut to receive it, and the top of the pan should be from one and a-half to two inches under water. This is the proper depth in all places. The ring of the trap chain is slipped on to a stick having a hook left near the bottom, and a crotch at the top, and technically called the "tally-pole." The sharpened lower end of this is thrust firmly into the bottom in water deep enough to drown the Muskrat; otherwise it will gnaw off its leg and escape.

During the last of September, wishing to obtain a specimen from which to make a drawing, I set two traps on "feeding beds" surrounded by a thick growth of button bush and where there was little chance for the animal to drown, but which were the best places I could then find; the consequence was that, visiting the traps the next morning, I found in one the end of a tail, and in the other a fore-leg; the animals having gained their liberty at the expense of the imprisoned members. I removed one of the traps to a "feeding bed" where there was deeper water and no bushes, and the next morning found, drowned, the original of the accompanying portrait.

Muskrats are also trapped in their houses and in their burrows in the Fall; but a large proportion of those taken are so young and small as to be nearly worthless. A little of the animal's musk placed near the trap will attract them. The Northern Indians spear them in Winter in their houses, using a one-tined spear with strong barbs near the point. This is thrust through the side of the house and seldom fails to transfix one or more of the unsuspecting inmates; a hole is then chopped through and the game secured. In localities where they are plenty, numbers of muskrats may be seen swimming about; toward the close of warm days in early Spring and considerable sport may be had in shooting them at such times. They may be called within easy range, by imitating their cry, which resembles that of a young puppy.

A Muskrat raised a litter of young in a small pond of some half-dozen rods in extent, near my house. I used to place sweet apples on the water's edge for them, which the young rats were not long in finding, and soon became so tame that they would come at my call, and, after a while, would swim up and take the apples from my hand. Cold weather closed the pond and I saw no more of my musky pets till the next Spring when they were full grown and wild as any of their ancestors. The whole family shortly left, probably for wider waters, and I saw no more of them. Muskrats sometimes wander a long way from their homes, and are occasionally seen following the course of very small brooks. A neighbor of ours once caught one in a trap set for the common rat, in a meal-tub in his hog-house. This was more than a mile from any stream inhabited by these animals. It is a common belief that Muskrats have fore-knowledge of the earliness and severity of Winter and build their houses accordingly earlier in the season and with thicker walls; and, also, if the water is to be unusually high, they will build their houses of greater hight. But their instinct is certainly not infallible, for last Winter great numbers were frozen into their houses and died of starvation, in the marshes of our nearest stream, "Little Otter Creek;" and it is not a very unfrequent occurrence that they are flooded out of their houses in great Winter thaws.

Muskrat skins are not in such high repute as several years ago, when they were extensively used in this country and exported in large numbers to England to be made into "beaver" hats. They now bring from ten to thirty cents apiece, according to the season in which they are taken. The flesh is dark and not very inviting-looking meat, but to my taste it is very palatable. The Indians prefer it to most any other kind of game, and will not eat duck if they can get the "Musquash," as they call this animal. The musky secretion is saved by some trappers, and it is said they sometimes realize as much from that as from the skins. It is sold for perfumery, doubtless under the name of Civet Musk, and most likely it is just as good as that. R.

* In the article on the Raccoon, "box-trap" should be "Fox-trap." The box-trap is a wooden affair much used by boys.

NOTES FOR NATURALISTS.

Fleas on Cats.—Our cats are liberally covered with fleas. Does any one know anything that will kill them or drive them away? I thought that perhaps they might be washed in something that would be disagreeable to the fleas; some one said pennyroyal tea would do it; so the children washed them with that, but it had no effect. —FLORENCE B.

TRY diluted carbolic acid.

English Sparrows having been introduced into Australia, great complaint results because of their destruction of fruit.

Snails in Paris.—The annual sale of snails in Paris for food is computed to be 12,000 francs.

Hygienic Information.

THE DIET OF FARMERS.

To one accustomed to dream of a farm and a farm life as an Olympian feast, a Hymettus, flowing with milk and honey, it is often a sad disenchantment to become acquainted with what is too often the reality. One is astonished to find pork and chickens to be the almost invariable alternates. Pork is the staple, and this in face of the fact that intelligent farmers who, of all people we have, *read* most, know it to be, in its best estate, the most innutritious of diets. Its unsuitableness as an article of food has been so often shown to us by chemists and physiologists that it is scarce worth while repeating, that it requires five hours and fifteen minutes for digestion on a *healthy* stomach; that on a *weak* one it scarcely digests at all, but lies and festers; that its nutritive qualities are of the poorest; that the diseased livers of swine (for they are nearly always diseased) are a fruitful cause of "biliousness." The normal condition of a hog is putridity. His element is filth. He lives in, breathes, and *eats* dirt, and yet farmers will persist in using him, absorbing his marrow into their most delicate tissues. They utilize him (he is so very precious) to his very hoofs. The house is filled with the savor of headcheese, and sausage, and ham, and tenderloin, and bacon, and the household economy travails with grease and hard work because of him, and thus they make a staple of what is, hygienically, their greatest enemy.

Now, on unusual occasions, such as the advent of the prodigal son, or the city guest, the swine secret is rarely told, but a show side is presented of chickens! Ah! chickens! As swine among quadrupeds, so chicken among fowls is most impure. If left to range at will a "diet of worms" is their *purest* meal. Untold quantities of the most disgusting ingredients go into their gizzards. The vilest compost enters into their very marrow. So chicken broth is *not* the quintessence of purities. Now, the ruminating animals eat only grass and grain; their meat is almost as pure as bread. Why not let a diet of beef, or lamb, (yes, lamb, thrifty farmer!) be the rule, rather than the exception? It is quite certain that economic reasons alone govern this matter. The swine secret is, *cheapness. Is* it cheap? To estimate the dearness of an article by its first cost is the most superficial of financiering. The fact that nothing is cheap which breaks down, rather than builds up the tissues and destroys the vitality is enough. The "doctor's" bill goes the hardest of all the expenses, and there is a greater relation than we think between pork and calomel! Who abstains from beef soup, loses an important essence of physical life; and yet, how rarely it is seen upon a farmer's table! The farmer and his servants must labor from dawn till sunset, with nothing better to sustain them than pork and cakes and pies! Why does the farmer so often say,

"We are so far from market, we can't get fresh?"

My dear farmer, what are the villagers eating down there but the very calf you sold last week to the butcher? Why not sell the swine and chickens, (if somebody must have them,) and keep the calves and beef and good fat sheep? Are you not as good as the villagers that you cannot eat the fatted calf? How can you make your money in a *dearer* way than by *selling* your *best food?*

"You cannot keep so much, it would spoil?"

In Winter you can keep meat fresh a long time, (all Winter, in fact,) by packing it in barrels with straw, and setting it where it will remain frozen, keeping it tightly covered, so that dogs or other animals cannot forage upon it. In Summer it can be salted; and although cured meats are not wholesome, they are less deleterious than pork. But fresh meats could be easily secured the season through, by neighborhood co-operation. In not too sparsely settled districts an agreement could be made whereby each family should obligate himself to have something ready at stated times for his own and the neighboring families, thus securing a succession of "markets" to all. LEIGH LAKE.

Geneva Lake, Wisconsin.

Women should keep their feet dry and warm—no matter how "clumsey" they may look if properly clad. Try this and be happier and healthier.

Arboricultural.

AN INTERESTING FACT IN THE GROWTH OF WILLOW TREES.

At one time the idea very generally prevailed that the roots of a tree occupied an area exactly equal to that covered by the branches, and the advocates of this theory presented a somewhat plausible reason in its support. The branches and leaves of the tree were supposed to act somewhat in the manner of an umbrella, shedding the rain from one to the other, outwards from the center, so that the greatest amount of rain-fall was always found exactly at the outer edge of the space covered by these leaves and branches. This rain, with the fertilizing salts which it washed out of the atmosphere, were said to draw the roots outward, just as the root of a vine or tree is well known to be attracted from great distances toward a bone or other similar object. This was, as we have said, very pretty and very plausible, and would have been excellent if it could only have stood the test of facts, which unfortunately it could not do.

The amount of space occupied by the roots of any vegetable depends largely upon the character of the soil and also upon the peculiar circumstances under which the tree has been propagated, for these latter influence very largely the extent and character of the root growth. Those who hold to the theory we have just described, would no doubt, be very much surprised to see a tree fifteen inches in diameter and whose branches covered a circle more than thirty feet across, supported by a mass of roots, the great bulk of which were contained within a circle of three or four feet in diameter. Such a tree and such roots we have seen within a few hours. That many fibers extended to a greater distance is not only probable, but certain; but the roots were all small, and by no means numerous beyond the space we have mentioned. The great mass of fibrous roots were to be found within a very short distance of the trunks of the tree. The circumstances under which these trees grow are as follows:

About thirty years ago the owner of the land planted a row of willow trees along the roadside bounding his property. The "planting" was performed in a very simple manner; a hole was made with a crowbar, a large willow stake pointed at the end was driven down, and the operation was considered finished. The trees grew luxuriantly, formed fine heads, and really seemed to be a success. But a few months ago a gale of unusual violence passed over them, and almost without exception they were torn from the ground and prostrated. And to-day they lie there, revealing the whole process of planting and its effects, and forming a fine study for those who take an interest in vegetable physiology. There is the original stake, pointed for the purpose of making its way into the soil, and showing the ax-marks as plainly as on the day it was prepared. At a point about ten inches below the surface of the soil it has enlarged to a very disproportionate size, and at and just below the point of this enlargement, a mass of fibrous roots has formed, but no roots of any great size have made their appearance.

Willow trees are often planted by the side of streams and in similar locations, for the purpose of binding the soil, and thus preventing it from washing or sliding away. To prove efficient under such circumstances, a great point is to secure a free development of roots. If the case that we have described may be taken as a guide, it shows that this end will not be attained by the use of large branches, pointed like stakes and driven into the ground. If we wish to secure abundance of roots we must employ small cuttings. These will undoubtedly make the best trees after the lapse of—say ten years. In the meantime, if we desire immediate effects, we may use the large stakes, setting them out between the smaller cuttings, and removing them when the latter are capable of occupying all the soil. From the uniform character of the results exhibited by the long row of trees just mentioned, we would be very suspicious of the stability of any large trees raised from cuttings of great size.

It is pretty generally believed by horticulturists that the same rule applies to other plants as well as to the willow. Large cuttings of the grape vine never give as profuse and healthy roots as those of smaller size, such as single eyes for example. Some even go so far as to say that the less we use of the old wood the more healthy will be the future plant, and certainly the case we have cited tends to corroborate this view. P.

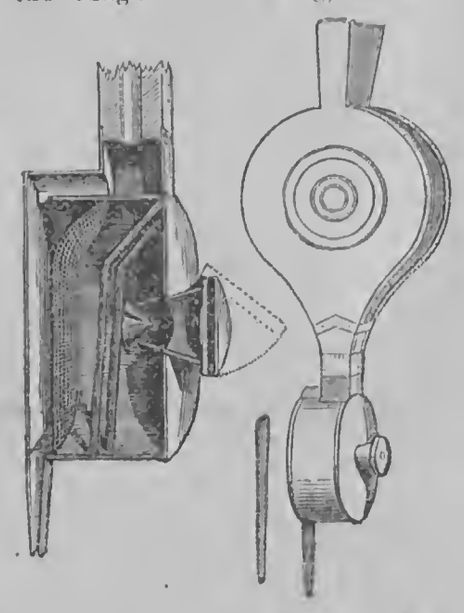
ARBORICULTURAL NOTES.

How to Keep Rabbits and Mice from Gnawing young Trees.—Take five or six corn stalks, cut about two and a half feet long. Stick them close around the young tree and secure them at the top by tieing a small cord around the whole. This is an excellent plan, as the readers of your excellent paper may learn, if they will give it a trial. It is not only a sure protection against rabbits and mice, but is some protection against the cold of winter.—B. Judy, *Yellow Springs, O.*

The Vineyard.

MILDEW ON VINES.

We copy the following remarks upon mildew on vines and the accompanying illustration from an English journal:—Mildew is a terrible disease that sweeps over Vines with destructive force. Its origin is often climatical. Sudden alternations of heat and cold, from wet to dry, and those peculiar atmospheric conditions called, for want of a better name, "blight," breed mildew; the latter may be fought sometimes with a volume of smoke. If a heap of green boughs or furze, or even damp grass or leaves, could be set fire to, near to the vines, when the blight is approaching, the smoke would either prevent the germs of the fungus from falling, drive them



SULPHURATOR, WITH VERTICAL SECTION.

away, or neutralize their effects. The chief causes of mildew may, however, often be found in unskillful treatment —over-cropping, under-feeding, over-crowding. Mildew takes advantage of a weak plant, while a strong one often defies it. Not always, however, for mildew is one of the most powerful as well as subtle of all diseases. The only cure yet discovered for it is sulphur. Dash this dry or sprinkle it wet on the fungus, and persevere in doing so until it dies. Never mind the vine; leaves and fruit being smothered in sulphur; better powdered thus than whitened with mildew. If the latter is killed, the former can soon be washed off.

The best chance of vanquishing mildew consists in attacking it early. In fact, when discernible, it is almost too late. Sublimated sulphur can be blown on the vines through a sulphurator, with bellows attached. About three applications in a season will insure freedom from mildew. Give one as soon as the bunches show themselves; a second after the first swelling has taken place, and a third just before the grapes begin to color. It is safest to apply it in the evening, when the leaves and fruit are wet with dew. If used during sunshine, the sulphur fumes are apt to pierce the thin skin of the fruit. Sulphur vivum, at the rate of 2 oz. to a gallon of boiling water, and applied with a showerer, is a preventive of, and cure for, mildew. Should this disease have appeared one season it is a good practice to paint the vines with sulphur during the Winter, with the view of destroying the spores.

RICKETT'S GRAPES.

It seems that the subject relative to the grape is not often alluded to in the papers this fall—not, at least, in the agricultural journals that I get. The thing has come down to a common affair. Now and then, however, we come across something that arouses again. Mr. Ricketts of Newburgh, N. Y., lately sent me a box containing twelve varieties of his Hybrids, all of which came in good condition but two. His success in hybridizing exceeds Mr. Rogers' greatly in quality, from the fact that *he* used for one parent varieties of fair quality, while Rogers had but one (a vile fox grape) for his crossing.

A distinctive feature in Rickett's grapes is that they have nearly all the fleshy texture of the foreign kinds. They are all good, even first-rate, but two are remarkable:—His No. 1, cross between Israella and Muscat Hamburg; bunch medium; berry as large as any native or hybrid I ever saw; black, and nearly as good as Black Hamburg. Also, the Secretary. If he had raised but this alone, it would immortalize his name among grape growers. It comes up to my notion of a splendid, large and showy grape, of a quality good enough for any one. Then its wine will be equal to the grape in value. We have some of these under trial that will bear next season, and if they surpass the Eastern and Northern as usual when brought here, there will be something worth looking at.

The grape crop here was good, but being mostly Concord, which scarcely pay for gathering, our vintners are by no means elated with the enterprise.

Bluffton, Mo., Nov. 5. Samuel Miller.

Manufactures.

AMERICAN WATCH-MAKING.

Probably the most ingenious contrivance ever invented by man, requiring the highest skill in its construction, is the watch. What can be more delicate or nice in its details than the mechanism of a little instrument which shall keep perfect time? The structure of the machine, and its adaptation of parts, must be such as to produce uniform action. A single imperfection anywhere, and the end aimed at is defeated; the watch does not keep good time—it is, comparatively, valueless. To walk through a great watch factory, studying the hundreds of different operations carried on in the manufacture of a watch, is much like going through the dissecting room of a medical college and examining the delicate nerves, fibers, tissues, etc., which compose the human body. In a watch factory we are constantly impressed with the years of labor and hard study which some one must have expended to bring the business to the perfection which it has now reached. We do not hesitate to say that the best watches in the world are made in America to-day. And it follows in reason that this must be so, since in Europe the different parts of a watch are made by hand, while in this country they are produced with absolute precision by never-varying machines.

We recently spent a day examining the process of watch manufacture at the large and beautiful factory of Giles, Wales & Co., (U. S. Watch Co.,) in Marion, N. J., and although a month might be consumed in the study of the wonderful operations thus going on, enough was seen to convince a reflecting mind that the manufacture of watches by this house has been so systematized and perfected, as to leave nothing to be desired. It will be impossible in an article of any ordinary length, to describe the making of a watch, from the cutting of the dies which stamp out the various wheels, plates, etc., to the putting together the perfect instrument, and baking it in an oven, or freezing it in a refrigerator. We can only glance at the general outlines.

The factory is an immense building of iron and glass, where hundreds of men and women are employed. The building is admirably lighted, heated, and ventilated, and the strictest discipline is enforced. Each employe in the factory has some specific work to do, and in time becomes master of his branch of it, attaining perfection. There is very little hand-work done in the factory, curious, oftentimes automatic, and never varying machines, performing most of the labor. Many of the machines are so regulated with dials, etc., that it is impossible for the operator to vary a hair's width without at once becoming aware of the fact. Some of the machines, such as those which cut the teeth in the wheels to be used in the watch, are operated with such precision that the expansion produced by heat has to be taken into the account, and work is only commenced after the machine has attained a certain degree of temperature. If the machine when cold should commence to cut the teeth in a watch-wheel, and continue so doing until it had become heated, the teeth would vary enough to affect the time-piece.

It may be stated, in general terms, that every part of a watch manufactured by Giles, Wales & Co. is made after a certain established standard, and by machines which have been built for making this standard, so that it is impossible for any variation to take place. The result is a perfect watch, which commences to run as soon as it is put together, and needs but little regulating. Every part of a watch can thus be easily duplicated, since it is as easy to make a hundred parts as it is one. Thus the manufacture is systematised, a fact impossible of accomplishment where watches are made by hand, as at Geneva, in Switzerland. If a man carries a watch made at Marion, N. J., and by any accident any portion becomes broken, he can easily have it duplicated at his watchmaker's, and since a stock is always kept on hand, there is an exact counterpart to the missing or useless piece. With a hand-made watch, there can be no standard, since every watch so made is necessarily different from every other watch. The human hand is not capable of producing two things exactly alike, as a machine can. This is an advantage. American made watches have over those produced in Europe. And if Giles, Wales & Co. send a case of their watches to the great Exposition in Vienna next year, we shall expect to see them astonish the world.

Among the interesting operations we witnessed at Marion was the boring of holes into the watch plates for the wheel-pivots and staples to rest in; the cutting of teeth in the wheels; the making of steel screws so fine we had to look at them through a magnifying glass; The manufacture of the regulator or balance wheel, composed of steel and brass, in the best proportions to counteract the influence of heat and cold; the polishing of the steel wheels; the cutting of the rubies and garnets into small bits for tipping the points of bearings, and jewelling the watch; the manufacture and coiling of the delicate hair springs; the enameling of the dial faces of the watch and the painting of the divisions of time upon them; the putting of the instrument together, when it starts off with a buzz like an intelligent thing of life. As there are nearly three hundred different pieces in a watch, it will at once be seen that a vast number of different operations have to be gone through with. When the reader learns that there is a distinct machine for each operation, he will form some idea of the vast extent of the factory, and of the scores of ingenious machines it contains. Here is an artist painting the dials; here is a man burning on the enamel in a hot furnace; here is a man gilding the wheels; here is one sawing up jewels as a marble cutter saws his marble; here is an engraver; here are polishers; here die-cutters; here a man is tempering the wheels, etc. Many young women are employed in this factory, and they have been found to be as expert and good workmen as the men. Intelligent Americans make the best workmen, although Giles, Wales & Co. have all nationalities in their employ.

This house is now manufacturing a complete line of watches of all sizes, so it is no longer necessary for dealers to purchase certain sizes of European make to complete their line. The stem-winding watch is now universally in favor, and after much labor and many experiments, Giles, Wales & Co. have invented a simple and strong stem-winding apparatus, which is not liable to get out of repair, and is so simple, no better plan for stem-winding is likely to be ever invented. The watches of this house have borne the test of actual use for so many years and by so many men, it is unnecessary for us to add a word in their favor. They are made at all prices, from the boy's cheap watch to the most costly chronometer. They are put up in elegant and beautiful cases, to suit the taste and purse of all classes. Americans have reason to be proud of such a triumph of their mechanical skill and genius. We know of nothing in the whole range of mechanism which equals it, and certainly Europe cannot produce a better watch than those made by Giles, Wales & Co. of Marion, N. J.

The American Institute Fair, which has just closed in this city, has awarded the highest premium, a *gold medal*, to the U. S. Watch Company, Giles, Wales & Co. Out of 1,635 exhibitors at the Fair, only five gold medals were awarded, of which one was for the beautiful and remarkable watches we have described. Our own appreciation of the value and reliability of these Watches is indicated in the fact that, after having given them as Premiums for some years, to the satisfaction of recipients, we offer more styles or sizes in our new Premium List (see page 383) than ever before.

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Cured With Cabbages.—*Nov.* 25.—A young lady from the city, who occasionally spends a few weeks with us, has often remarked that she thought farming and a farmer's life was "splendid," even if there were losses and considerable hard work to be endured. The part that seemed to interest her most was the selling of fruits and vegetables in market, the handling of the money and reckoning up the receipts of each load; and like many city-bred men and women, the cost of production, labor and time expended in preparing and taking to market she never thought of; but the whole thing was in that one nutshell—sale and receipt of cash. This morning when JOHN was preparing a load of cabbages for market, I proposed, in a banterling way, that she should go along and learn what a delightful thing it was to sell vegetables in a country village. Much to my surprise she accepted the offer, remarking, at the same time, that she thought it would be "jolly," if she could have an interest in the receipts, to which I agreed, and the bargain was closed at once. JOHN is a gentleman of color, who has been in my employ ten years, and like a majority of his race, is full of natural wit and good humor—nothing in the way of ordinary accidents or discouragements ever causing him to speak, except in the mildest language, consequently he is a great favorite with the ladies. When leaving home he remarked that cabbages ought to sell well to-day, considering the attractiveness of his load, at the same time casting a side glance at the feather in Miss B's hat. In due time the load was sold, and JOHN and the young lady returned; but the latter was quite reticent for some time in regard to the sale of the cabbages. At last, however, it came out in little bits, as the various ludicrous circumstances attending it recurred to her through the day. "Why," she would say, "I did not not think folks would tell such awful falsehoods to save a few cents. One man came to the wagon and asked the price, and when JOHN told him, he said 'It's too much—too much; but if I had not so much cabbage now I'd take two or three dozen, at four shillings a dozen. But I've so much—so much cabbage. I do' know what to do with them. I'll give you four shillings a dozen for three dozen.'

"'They are yours' said JOHN. And now what do you think," said Miss B; "When JOHN carried the cabbages into that man's cellar, he had not one there, after all his talk about 'so much cabbage.' Others would find fault about the size or price, and tell how cheap they had just procured a quantity, and JOHN never seemed to mind it or pay any attention to the awful stories they told."

I think our city friend will remember this trip to market for some time, and the lesson learned would be a good one for every city or country Miss who thinks that it is "jolly" to be a farmer and have something to sell in market.

Amorphophallus Riveri.—*Nov.* 26.—This new and curious tropical-appearing bedding plant, introduced the past season, is likely to become a general favorite, on account of its luxuriant growth and rapid multiplication of the tubers. The small tuber which I procured last Spring was planted in a large pot and kept there during the entire Summer; but I think it would have succeeded even better in the open ground. The stem died down quite early this Fall, although not exposed to frost, and upon turning out the roots I found not only the one large tuber planted, but quite a number of smaller ones, which had been produced at the ends of small, subterraneous stems, somewhat similar to our common potato. These small tubers are about an inch in diameter and about a-half to three-quarters of an inch thick. They ripen and become quite dry and hard while in the earth, and may be readily preserved through Winter in any dry, warm place. At present these tubers command a high price, but they will soon be cheap and within the reach of all who may desire a plant with such a long name.

Carbolic Soap for Insects.—*Nov.* 27.—A few days since I tried an experiment with carbolic soap in killing insects upon green-house plants, particularly the green fly (Aphis), which, as everybody knows, is a great pest, and one not readily destroyed, except by fumigating with tobacco—not a very agreeable operation to perform upon parlor plants or in a conservatory attached to a dwelling. My first experiment with this soap was a decided success, operating upon two hundred roses just in bloom, and it was conducted as follows:—Into a pail of warm water I put a lump of soap the size of a small hen's egg. The soap was cut up into small pieces and the water agitated until it was all dissolved, forming a warm suds. The water should not be too hot, but if not above 120° or thereabout, it will do no harm. Into this suds each rosebush was plunged (holding the pot inverted in the hand) and kept there about a half minute. After plunging, the plants were set aside for a few minutes, then dipped in the same way into clean water, shaking them about thoroughly, washing the leaves, and then returned to their former place in the house. Whether it was the soap or warm water that killed the green fly I will not say, but there is one thing certain, they are all dead. My next experiment will be hot water, heated to various temperatures, in order to ascertain which will withstand the most heat, insects or plants. The result will be reported, whether a success or otherwise, for my green-house is my Winter experimental ground as well as workshop and entomological laboratory, if that word will convey a correct idea of a place where one keeps jars, pots and logs of wood filled with the larvæ and pupæ of various species of beetles, moths and butterflies.

Pet Animals.—*Nov.* 28.—JOHN is running an opposition to my entomology, and turning the green-house into a miniature zoological garden. An oppossum, several rabbits and Guinea pigs are already in the collection, and in a flourishing condition. Since JOHN has been permitted to keep his pet animals in the green-house, I notice he is far more attentive to the fire, it appearing to be no trouble for him to visit the furnace room late at night and see that everything is in order, for the oppossum sleeps through the day and is lively and playful at night, and is always ready to welcome his master at that time. It is strange on what little things our happiness often depends; and while we may smile at those who bestow care and affection upon a low order of animals, the source of these feelings is a divine one, and it is better to encourage than oppose them. Parents who deny their children pets are suppressing, by that act, one of the noblest traits of the human character; and a boy who loves his dog or a girl her kitten, are but cultivating the growth of one of the divine attributes which, in good time, will be developed into a love for all of GOD'S creatures, and their capacity correspondingly enlarged for enjoyment. We must learn to bear with what many persons choose to term "follies," and even encourage many traits in others that are disagreeable to ourselves, for the sake of the greatest good to the greatest number.

Industrial Topics.

FARMERS AND FARM LABOR.

WE have heard and read in different agricultural papers, the past year, a great deal on the subject of farm labor; and yet there has been no definite conclusion arrived at. Labor and capital will, I think, always have to join hands and work for one another's interest, for they are both dependent one on the other. So far as I go, I think it is the poorest paid occupation and the least independent trade a man in anywise ambitiously inclined, can follow. For instance, a married man working on a farm receives on the average $20 per month and house rent. Out of this $20 there are a wife and possibly one or two children to support. What is it among three let the wife be ever so saving? True, sometimes he is allowed a garden, a pig or a cow. But if the farmer raises corn, let me advise you to never let your pigs be in better condition than his, no matter how poor his may be. But leaving the money question aside entirely, can you show me what inducements are held out to competent men to take situations on a farm? I see none. They are nothing more or less than manual working machines. He that accomplishes the most is expected to accomplish a little more. What advantages has he compared with the hod carriers, coal heavers, street sweepers, or any other unintellectual laborers? The rule has become, on the side of farmers, "*the least amount of compensation* for the *greatest amount* of work;" and on the side of the farm hands, "*the least amount of work*, for the *greatest amount of compensation*—both antagonistic.

The farm hand very rarely has any time he can call his own—not even on a Sabbath, in some cases. His working hours are from the time he rises in the morning till darkness overtakes him at night. Is it so with other classes of manual labor? But to the remedy. I see none until there is more confidence between the employer and his men—until the employer makes his help know that he does not look upon them as mere working machines, to be worked at the utmost power, equaling the amount of wages paid. He must make them feel they are a help to him, that in them lies a part of his business; let them know that it is not for the money or workable value he employs them, but as co-workers interested in the business.

Another serious drawback to agricultural labor is that there are too many farmers: or, rather, there are too many men in the farming profession. I do not believe there are in the United States, this day, ten farmers out of every hundred who make more than a bare living. I myself would not work for a man who did not farm on a profitable basis. I should know that I would not reap any advantages in any shape. What we want is intelligent labor, not merely brute force—labor that will know how, when and where, the cause and effect; mind and swelling muscle acting together. It is foolish to think that such can be had for the small pittance of twenty or thirty dollars when other branches of business hold out greater inducements.

But some will say farming cannot afford such expensive labor. I think it will. Those who cannot make their farms profitable enough to pay intelligent labor, must be satisfied to go on with such as has strength enough to hold the plow handles and follow the horses. With all our improved agricultural machinery intelligent farm labor is not, nor will it be, equal to the demand. Farming must be carried on in the future more as a business and not left open to every adventurer who has failed in everything undertaken and jumps into farming as the last resource. We see it every day—men buying farms who can hardly tell an ox from a cow, thinking if they cannot do anything else they can farm. If such thought at all, they would know that to be a successful farmer needs as much tact, energy and business qualifications as any trade or occupation existing.

ONE WHO HAS BEEN THERE.

Land Department.

SOUTHERN LABOR.

I SAW a paragraph in the RURAL NEW-YORKER of Oct. 12, stating that the negro and poor white man of the South would never rise. [Our correspondent is mistaken. No such language was used by ourselves, in the paper referred to. Nothing whatever was said about the poor whites of the South. We do not, because we publish a correspondent's letter, necessarily indorse its contents; but in all cases when comments are made upon an article previously published, it should be quoted truthfully. *We*, the editors, said nothing whatever concerning the negroes or white man.—EDS. RURAL NEW-YORKER.] The truth is plainly stated in the RURAL of Nov. 13, that is, a negro will not take care of his money; he will spend it foolishly for a $5 shot gun, prize-candy, etc., before his cotton is even made. He will run in debt to his employer sometimes to the amount of $50 to $100 more than his salary, and sometimes more. The wages of the negro are from $150 to $500 per annum and his board. Can not the young men of the North live upon that? Do you call that poor wages for an ignorant person, who can not read nor write?

The poor whites generally get from $300 to $1,500 per annum. You can see from the following that a man of energy can prosper in the South. At the close of the war, 1866, a young man appeared in our midst, having only his horse and brain to work with, he engaged earnestly and worked like a man of sense, he is the owner of the following property: 1,000 acres of land valued at $25 per acre, $25,000; 16 head of horses at $150, $2,400; other valuable property, about $6,000. He is worth more than $35,000. He raises 100 bales cotton per year, upon an average, besides other crops. Is this always remaining poor? But in that of October 12 is enough to discourage any one.

Georgia has about one-eighth of its lands cleared; all the remaining seven-eighths is thickly wooded, fertile land; about one-thirty-second, old field, which has been lying out ever since 1860, is now rich. Let our young farmer friends of the North, who have not $200 to spare upon one acre of northern land, come down South and settle this vast region. Georgia is twice as large in area as New York, and yet it has one-fifth of the population. Come South, young men; you are invited; come, if you are honest. The feelings engendered by the late war are over between us. Come, let us join hands and be friendly. C. F. G.

Madison, Ga.

WE are quite willing Georgia should be developed, that her people should prosper, that the people of the North should settle within her borders and help reap from her soil and climate an abundant reward for honest industry; but we have no doubt that we know something about the young man referred to in the foregoing letter, and have serious doubts whether the whole story has been told by our correspondent. If it has been told, will C. F. G. give us the name and address of the young man who is worth $35,000 made out of the cultivation of the soil of the South in six years? The people who are going to settle in any country—East, West, North or South,—want the truth, the *whole* truth, and nothing but the truth to guide them.

Pisciculture.

DOMESTICATED TROUT.

THIS is the title of a compact, meaty volume of near 350 pages, by LIVINGSTONE STONE, M. D., published by JAMES A. OSGOOD & Co., Boston, Mass. Mr. STONE is well known as a practical pisciculturist, a writer upon fish culture, and can tell, practically, how to breed and grow trout. It is a work which every man who proposes engaging in the business can afford, and cannot afford to fail to read. We have not space to attempt an elaborate review of it; but we are struck with the compendious recapitulation of its contents and of the essentials to be observed in breeding, at the close of the volume. This compendium we propose to insert here:

Water.—Cautions to be observed in selecting water for trout breeding. Beware of—1, insufficient water; 2, freshets; 3, water that heats in summer; 4, water intrinsically unsuitable.

Ponds.—Points to be secured in building ponds:— 1, excavate, rather than dam up; 2, build compactly; 3, build small ponds for business; 4, be able to draw off the water; 5, avoid hiding places; 6, protect ponds thoroughly.

Buildings.—A full set of buildings or rooms consist of—1, hatching apartment; 2, meat assortment; 3, store-room and carpenter's shop; 4, office; 5, ice-house.

The Hatching Apparatus.—The hatching apparatus consists of—1, supply reservoir; 2, aqueduct; 3, system of filters; 4, hatching apparatus proper.

The Nursery.—The points to be secured about a nursery are—1, a fall of water; 2, a current; 3, protection from sucking against the screens; 4, security from overflow; 5, absence of fixed hiding places; 6, compactness; 7, protection against natural enemies; 8, perfectly tight compartments.

Taking the Eggs.—The direction for taking the eggs are—1, use eggs that flow easily, and no others; 2, use ripe milt, and no other; 3, make quick work; 4, stir well while stripping; 5, allow time for eggs to separate; 6, rinse thoroughly.

Hatching the Eggs.—*Dangers.*—Fungus, sediment, living enemies and byssus. *Remedies.*—Carbonized wood, flannel filters, covers, daily examination.

Alevins.—Dangerous instincts—1, to hide; 2, to pursue a current of water.

The Young Fry.—Directions—1, have healthy, well-fed feeders; 2, develop strong and healthy embryos in the egg; 3, provide suitable place for young fry; 4, take good care of them.

Large Trout.—Precautions—Guard against: 1, freshets; 2, overstocking; 3, heated water; 4, careless handling; 5, cannibalism; 6, fouled water; 7, natural enemies; 8, poachers.

How to Grow Very Large Trout.—Give them—1, plenty of water; 2, plenty of food; 3, (relatively), warm water; 4, wide range; 5, ample space.

The details of this admirable summary of this volume are given in full, and the reader has an idea of the use it may be to him to study it.

Domestic Economy.

"FARMERS' WIVES' WORK."

In reference to "farmers' wives' work," as represented in the RURAL of Nov. 9, written by "H. H.," I shall be obliged to say to her that no woman of the present period can, from one years' end to another, do the routine of work that she has represented her "lady friend at her left" as doing. I was born and raised on a farm, and know exactly what a woman can do. And even if she were a daughter of a woman who had emigrated to this country from the Emerald Isle, and had inherited an iron constitution, as daughters of that race are wont to inherit, she could not accomplish the amount of work that her friend has represented her as doing. I have several reasons why I think so.

"H. H." "says the first thing she does after arising in the morning is to put her bed-rooms to airing," which will take five minutes at the least calculation. "She then goes to the kitchen, builds a fire, puts on water to heating to wash milk pans with." This will take ten minutes. She skims and empties very nearly sixty milk pans, this will require thirty minutes allowing only one-half minute to each milk pan, which I should consider dispatching work more rapidly than any one woman is capable of doing in so limited a time.

"By this time the two youngest children are up, and ready to be dressed and combed." Should her youngest child still be in its baby-hood it would as a matter of course require more care, than a child which had grown to be two or three years of age. Not knowing, but presuming that it is still a helpless babe, and it should take to crying on arising, as is very common for young children to do, what shall she do? Shall she take her babe and minister unto its numerous wants which its little tongue has not, as yet, learned words to express, and whose wants only a mother can supply? Or shall she go on with her work, leaving her babe to encounter a world of troubles, and by suffering, then dying for the want of care, end them. No mother but one who has a steel heart that is not capable of impression, or one who for the love of gain dispenses with hired help, would even be guilty of such an act.

Counting the time it requires to dress and comb her two children, ten minutes more, straining the milk that has been brought in, and getting the breakfast requiring one hour of time, summing up the time which has been spent since arising until breakfast, is very nearly two hours.

I should like to ask what the remainder of the hired men are doing while those who do the milking are performing their duties. And also while the housewife is dispatching her rounds of morning's work, which she is obliged to accomplish until breakfast is ready. For it is not very common that four or five hired men can be provided with work for nearly two hours every morning, (except Sunday), near the dwelling or barn yard premises in order to be in hearing when the bell rings for breakfast. Nor should I think it would be very economizing to have them remain in idleness for nearly two hours every morning waiting for breakfast, while, in that length of time, if they had been out at their daily employment, they could have saved enough by putting this lost time to useful labor, to pay a *hired girl* to help perform the household duties, who would lighten the housewife's labor one-half. Have breakfast in due season, which should be in half an hour after arising, enabling the hired men to get to their work over one hour earlier, thereby, in the meantime, having her, (the hired girl's) wages made. Not only would her help in the morning be an introduction of economy, but, through the *whole* day helping to do the various amount of work that every housewife is obliged to do, giving her more time to teach and care for her children; to cultivate her own brain by good and useful reading. Nor would this be all; it would be giving her a general relaxation, only just leaving her enough work to keep her system in a healthy condition, that she can do by her children, as *her* mother did by her, "bequeath them a good, strong constitution," while if she goes on doing the amount of work her friend has represented her as doing, (which I say again no woman ever can do,) her children will be pale and sickly; a misery to themselves and every one around them. ELLWOOD.

WE hope the house wives will continue to exchange experiences and recipes in this department.

The Poultry Yard.

HEALTHY FOOD FOR CHICKENS.

I HAVE noticed lately, in many of the Eastern and Western papers devoted to the interest of farmers, a great complaint in regard to "Chicken Disease," almost equal to the "Epizootic" among the horses. Now I find no such reason to complain of mine, and I have as fine stock as there is in the county, full-bloods of different kinds. Having had considerable experience in the "chicken business," will tell your thousands of readers how I feed mine from Nov. 1st to Feb. 31st.

For one hundred hens I take every morning one dozen medium-sized potatoes boiled and mashed, together with five quarts bran, one quart of good wheat middlings, and one teaspoonful Cayenne pepper; mix the whole with *hot* water. This dish they relish, keep perfectly healthy and produce an abundance of eggs. I, of course, give them fresh water every day, and get at the butcher's every Wednesday morning, three lbs. of what we, in the West, call "cracknels," or the refuse of renderings of lard. The cost of this latter is very cheap, —three cents per lb.—and the chicks devour it with as much zest as you and I do our mince pies. When there is snow on the ground I keep them in the hen house, which is always kept clean and dry, one built expressly for them, 28 by 40, with every convenience for their comfort. Of course to have nice, healthy and fat chickens and plenty of fresh eggs requires care; but I do this in the morning while breakfast is being prepared, and don't seem to miss the time; and when we desire a nice, fat, plump hen for dinner, or eggs for breakfast, we always have them on hand. Our Brahmas, when roasted, are about equal to a turkey. C. S. S. TODD.

Plymouth, Ind.

POULTRY NOTES AND QUERIES.

What Ails my Brahma Hen?—Can you, or any of the readers of the RURAL NEW-YORKER tell me what is the matter with my Brahma? I bought her last June. She was two years old; she had laid all the Spring and had wanted to set, but had been broken up; she has never laid an egg since I purchased her. She seemed to be well and eat well; but she had a very large crop. One day she refused to eat; I examined her crop and it seemed to be full of water and was covered with lice. I used butter and sulphur, and she seemed to get better. I have given her everything the RURAL has advised, except liver pills. Some one wrote in No. 6, Aug. 10, that he cured his by giving one or two liver pills a day for two days. I would like to inquire what kind of liver pills he used; there are many kinds. Those I use for myself are so powerful that I can only take a half one every other night. My Brahma seems to be affected something like the fowls of "Dixie," who wrote July 20. My hen seems to be choked, but does not open her mouth in trying to swallow; she eats well most of the time; there is a hard lump in her crop, as large as an egg. Please inform me, through your paper, what to do.—C. W. COLE.

Hennories Necessary.—The Germantown Telegraph says:—Those not fully familiar with all the requirements of the "hennery," should remember that if they desire a liberal crop of eggs in the Winter, fowls must be fed with raw meat chopped fine, not less than twice a week. They should have a constant supply of gravel, also old mortar, lime or ground bones. They should be kept warm—the house should have a southern exposure, if possible, with window lights to shift when necessary. No one who cares about the appearance of his lawns, or the cleanliness of his yards, doorsteps, etc., should allow his fowls to wander about. A *chicken-yard* as well as a chicken-house, is indispensable. As a dessert, a feed of crushed bones or bone dust should not be overlooked. On it mainly depends the success of the hennery in Winter.

"Chicken Cholera."—A correspondent writes us that in many cases what is called chicken cholera is not that at all—that on the hind parts of chickens are small nits; that the chickens pick these nits off their own bodies and swallow them; swallowed, the nits hatch into little worms in the gizzard and these worms kill the chickens. The remedy is greasing the hind parts of the chickens. We give this for what it is worth.

"GOOD PAY FOR DOING GOOD!"

LIBERAL PREMIUMS TO CLUB AGENTS!

MOORE'S RURAL STILL AHEAD

In Liberality to both Agents and Subscribers!

READ, LEARN AND ACT!

THE RURAL NEW-YORKER'S Agent-Friends, and everybody disposed to become such, all over the Continent, will please note the following announcement of UNPRECEDENTED PREMIUMS for both Club Agents and Subscribers:

Observe, firstly, that we give every Yearly Subscriber who pays $2.50 a Splendid STEEL-PLATE ENGRAVING. This *Grand Premium* is sent to every person paying $2.50 for the RURAL one year—so that each subscriber at that price really gets $7.50 for only $2.50! Note, particularly, that the offer will enable you to raise a Club with much greater ease and facility than ever before.

Note, secondly, the annexed list of VERY LIBERAL PREMIUMS offered those who form Clubs for 1873, or for one year from any date. See the Names and Prices of Articles, and the small number of Subscribers required to secure a Valuable Premium. Almost any one located in a locality where live, reading people reside, can, by a little timely effort, secure a Premium worth from $5 to $300. *Now is the Best Time to Start Clubs*, for now that the Presidential Campaign is over everybody will want such a good, useful and popular paper as MOORE'S RURAL.

Remember, thirdly, that every article we offer as a Premium is *First-Class and Genuine*—that we put each at lowest retail price, and that the names of manufacturers or dealers (given in most cases) is a guarantee of good quality, etc. Note, also, that all Club Subscribers—whether at $2 for the paper only, or $2.50 for Paper and Engraving—can be counted by Agents for Premiums.

The Table below specifies the Cash Price of each article offered as a Premium, and the number of subscribers required to secure it at $2, (our lowest club rate)—or at $2.50 with our Premium Engraving. Note that the Premiums are offered *without any condition as to whether the clubs are composed of new or old subscribers.* Canada subscribers must add 20 cents per yearly copy for postage.

SPECIFIC PREMIUMS,

TERMS, &c. FOR MOORE'S RURAL NEW-YORKER FOR 1873.

OPEN TO EVERYBODY.

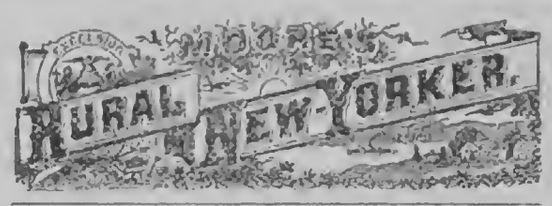
WESTERN BRANCH OFFICE:
No. 75 North Side of Park, Cleveland' Ohio.

THE RURAL NEW-YORKER'S new Colored Show-Bill, Prospectus for Names, Specimen Numbers, &c., are now ready for delivery to actual and intending Club Agents, at each of the above Offices.



SATURDAY, DEC. 14, 1872.

RICH HOLIDAY PRESENTS

FOR OUR AGENTS AND SUBSCRIBERS!

WORK AND WIN!

All Actual and Intending Agents of MOORE'S RURAL who wish to make themselves or their friends Handsome and Useful HOLIDAY PRESENTS should send in Clubs (or parts of large Clubs) soon as possible, and select the Presents from our Premium List on preceding page. Most articles can be sent promptly—by first return Mail or Express. We desire to aid in making a host of people happy during the Holiday Season—so, Agents, please hurry up your Clubs in order to secure Premiums for yourselves, and also copies of "Birth-Day Morning" for all Subscribers who pay $2.50. We are already sending our Christmas and New Year Gifts. An Indiana Lady to-day (Dec. 9,) sends a Club, selects a pair of Gold Sleeve Buttons (with the initial of a friend) and requests her Premium "by the 20th of Dec., without fail." And it will be forwarded at once—ahead of time.

GOODNESS IS GREATNESS.

THE lesson of HORACE GREELEY'S life is one worthy of study by every young man. He was the servant of all. He did not serve himself. He had his personal ambitions; but they were born more of a desire to know that the people whom he had so long and unselfishly served, and to promote whose welfare and prosperity he had so faithfully labored, recognized his unselfish efforts in their behalf, and were willing to indorse him as their servant, than of personal egotism and vanity. No one knew, better than HORACE GREELEY himself, what his allegiance to the interests of the people and his fidelity to his own convictions of right had cost him, estimating that cost as the world calculates such expenditures. Few knew how he yearned for the recognition which such a life of self-abnegation entitled him to; nor can men know how grievous was the wound made in his heart when he found that the arduous labors of a long and busy life as the People's Tribune, seemed to count for naught in the political balance.

But how grievously was he mistaken! How wrongly he interpreted the verdict of the people given in November! How little he dreamed that back of that verdict flowed the strong under-current of love, respect, honor and homage to his personal purity, honesty and philanthropy! How he underestimated the fidelity of the popular heart to a life and work such as few Americans had lived and wrought! Witness the mourning and sadness throughout the land to-day, that HORACE GREELEY'S work is ended! Witness the fearful tributes to his worth, his greatness, his goodness, which flow from the pens and are uttered by the lips of all men, without distinction of sect or party! Is not goodness, greatness? Is not a life of unselfish serving the best, the highest and the noblest life to live? Let him who would be greatest become the servant of all! Build your own monument, young man! Build it as HORACE GREELEY has his—in the hearts of the people, by honestly and unflinchingly striving to improve and elevate your fellow men, regardless of all projects or possibilities of personal aggrandizement. America—nay, the world—better to-day because HORACE GREELEY has lived. No civic honor that could have been conferred on him in his life could equal the glory and respect and reverence which attaches all American hearts to the memory of his busy life and the great work he has wrought for his country and countrymen.

WOMEN WANTING WORK.

"Is there anything a well educated woman can do in the city that will yield her an independent and comfortable living? If so, what is it?" So writes a woman in the country to one of the Editors of this journal. It is best this question should be answered here and now; for it is only one among scores of similar questions which journalists are constantly receiving from women (as well as men) in the country.

In response, we first ask, Is there anything a woman can do in the country, that will yield her an independent and comfortable living? If so, by all means stay there! Only yesterday an intelligent farmer from one of the central counties of New York, and living in a populous district settled by intelligent, well-to-do farmers, told us that the greatest need felt among them, and the most difficult one they found to supply, is that of intelligent, industrious female help. He said it was almost impossible to find an American girl willing to work in a farmer's home at any price; that they have to pay poor help, in the shape of ignorant Irish and German girls, four dollars per week, beside their board and "privileges." And yet there are hundreds of "well educated women" in this city who only earn from $4 to $10 per week, and have to pay their board and provide themselves with clothing out of it—paying from $3 to $8 per week for board, the price being governed by its quality, and the comfort and conveniences required.

These women, thousands of them, have come hither from the country filled with the hope of finding a "career" in literature. They travel from the office of one paper to another, peddling insipid "poems," or pointless "stories," or namby-pamby "essays," and weary with waiting for the editors to examine and pronounce upon their fate. Meantime the money in their purses dwindles away; they must do something; they haunt lawyers' offices for copying to do; job printing and newspaper offices for proof-reading; manufactories for light jobs of embroidery, bow-making, etc., etc. But a small per cent. of them ever find employment that will pay for respectable board and such comforts as they left at home. The anxiety and effort expended for subsistence wears lines in their faces from which all bloom and brightness goes. The life here loses for them not only faith in human nature, but, too often, faith in themselves.

And yet, would these women go into the city kitchens and work for better wages, more real leisure and the security and comfort of home, relying upon their own self-poise, merit and womanly dignity to take the sting out of what are now regarded menial duties? Not one of them! Could they do it if they would? We firmly believe so! We believe that if the young American women in this city who now scarcely know where to lay their heads, and yet seem to think themselves amply qualified to instruct the world with their pens, were to attempt it, they could quickly control the city kitchens and dictate terms to their employers—in other words, they could make themselves so much a necessity in our households that we would be glad to pay them double the amount they now earn in any vocation, beside giving them good homes and our respect. Or, better still, if they would stay at home and expend the same amount of vital force in making themselves useful there, they do here in being almost utterly useless, they would be far happier, healthier, and more respected.

So we do not advise any young woman to come to the city, as a venture, to make her living, unless she has a trade and is willing to work at it; even then the chances are she can do better in the country where she will find less competition. If she has a position assured her before-hand, it is a different matter; we are only advising those who have not; and we have not referred to the temptations which such a life here involves nor the dangers which swiftly follow.

RURAL NOTES AND QUERIES

"Should a Young Farmer Learn Drawing?"—So asks a young farmer of the RURAL NEW-YORKER, which responds, Yes!—just as certainly as we would advise you to learn to write. The young or old farmer who can sketch well can secure new ideas for practical use, or give them to those in his employ to work out, which he otherwise might lose or could only secure at great cost. Every child, male or female, should learn practical drawing from natural objects. It is the short-hand to the practical man that the phonetic system is to a newspaper man, or man of words. It enables him to tell what words will not describe. By all means, spend these Winter evenings learning to sketch, if you have the time to give to it. You can afford to take some time for it, no matter what your vocation.

The Iowa State Agricultural College has graduated its first class. We record the names of its members as follows:—John L. Stevens, Benton County; C. L. Suksdorf, Scott Co.; H. Page, Boone Co.; C. H. Tillotson, Story Co.; P. S. Brown, Fayette Co.; J. C. Arthur, Floyd Co.; C. P. Wellman, Winnebago Co.; H. Fuller, Wapello Co.; G. W. Ramsey, Buchanan Co.; E. M. Hungerford, Wapello Co.; F. L. Harvey, Humboldt Co.; Fannie B. Richards, Hamilton Co.; L. W. Noyes, Linn Co.; S. A. Churchill, Scott Co.; J. M. Wells, Story Co.; I. W. Smith, Floyd Co.; L. Foster, Wapello Co.; T. L. Thompson, Fayette Co.; C. A. Smith, Clinton Co.; C. N. Deitz, Jones Co.; O. Cessna, Story Co.; H. C. Spencer, Poweshiek Co.; Mattie A. Locke, Benton Co.; E. W. Stanton, Story Co.; S. H. Dickey, Henry Co.; J. K. Macomber, Cass Co.

Cat Exhibitions.—Are we sufficiently civilized, or are we not? Is a cat exhibition in this country necessary to establish our enlightenment, our refinement and progress in aesthetics and material development? If so, let there be a cat show, somewhere, very soon. England is getting so far the lead of us in this that it is becoming exceedingly humiliating to the American Eagle! We don't like the roar and grin of self-complacency with which the British Lion looks down upon us because we are deprived of cat shows. It is cruel to American cats, Mr. BERGH, that in this free country they should have no show at all, at all! Let the Managers of the Philadelphia Centennial call out American patriotism in regard to cats. We shall then be able to make more noise in the world!

The English Employers of Farm Laborers, with whom they have had trouble the past season, on account of hours and prices of labor, said trouble having been stimulated by Unions whose object is to control the laboring man more autocratically and exactingly than the employer can, are now paying back these laborers in kind by dismissing all of them that they can spare and turning them out on the mercies of the world, for the Winter, without work—especially all such as joined the Laborers' Union. Now these Unions will have opportunity to provide a livelihood for the men they control. So the strife is not yet ended.

Patrons of Husbandry and Politics.—While political topics are said to be prohibited from discussion in Granges, it is becoming about as difficult to avoid mixing in political matters as to make mince pie without meat, and appeals are being made to Patrons to vote against partisans who represent and serve monopolies and middlemen. Good! say we. But just as soon as it is known there is to be united action in this direction, the effort will be made by each party to win Patrons' votes by proving that their respective candidates are the men to vote for! How easy it will be for somebody to "sell out" somebody then!

Awards on Live Stock at Fairs.—Our Southern friends are wonderfully progressive. They are encouraging the production of a kind of stock much needed everywhere. We hope they may be imitated. For instance:—At the late fair of the Mechanical and Agricultural Society, held at Montgomery, Ala., Miss SOPHIE BARNEY received the award as the young woman who would make the best wife for a poor man; Miss EMMA MCCOY received the award as the best cook. There was also a lively competition in babies, but at last reports the distracted committee were consulting.

Helping a Brother.—In Mississippi, we see it asserted, the organization of Granges of Patrons of Husbandry is meeting with strenuous opposition from commission men and merchants, who have applied the screws by foreclosing mortgages on the property of those known to have become Patrons. This has resulted in the Brethren helping each other out. What folly such merchants perpetrate! The surest way to build up an organization is to persecute its members.

The Illinois Stock Law, "to protect domestic animals from running at large," was submitted to the people, each county having the privilege of voting for or against it. But twenty-nine counties voted on the question at all; of these twenty-one voted against it, and are thus relieved from its requirements. It is, therefore, in force in eighty counties—those not voting being compelled to submit to its provisions.

The Praise of our Premium Picture is very warm and general. See the poem about it on page 387. The ladies are especially delighted with it, and we hope thousands will receive copies as presents from their relatives and friends during the Holidays. Many have already subscribed for 1873, in order to secure copies of "Birth-Day Morning" as Christmas or New Year's presents.

Catalogues Received.—From WM. RALPH, Utica, N. Y., catalogue of Cheese Factory and Dairy Apparatus and Furnishing Goods.... From HOOPES, BROTHER & THOMAS, West Chester, Pa., Semi-Annual Trade List.... From F. C. JOHNSON, New Albany, Ind., Price List of fruit trees, stocks, etc....From A. BRYANT, Jr., preliminary list of tree seeds for fall of 1872.

Over Issue of Currency.—The correspondent who sends us a circular received from a firm in Connecticut, professing to sell United States currency of an over issue at a large discount, is informed that it is a swindle which has been again and again exposed.

BUSINESS INFORMATION.

Accident Insurance has come to be almost a science in this country, and chief among its professors is THE TRAVELERS, of Hartford, Conn. Old, well-established, thoroughly reliable, no wonder their business grows—though we do wonder, sometimes, that so many neglect so cheap and effective a precaution as a policy in a reliable Accident Insurance Company.

Ladies' Furs are now in demand—fashionable and comfortable—and our fair friends, in both city and country, will of course make a note of the announcement of C. G. GUNTHER'S SONS, New York, on our last page. Their large establishment, 502 and 504 Broadway, is an attractive and thronged place "about these days."

The Weed Sewing Machine ("Family Favorite") is highly commended by many of our Agents who have obtained it as a Premium. The "F. F." is again in our list, as will more particularly appear by reference to our enumeration of "Good Pay for Doing Goed" on preceding page.

RURAL BREVITIES.

ALSIKE clover can be obtained of any seedsman advertising in our columns.

THE correspondent who asks us to send him the blacking recipe is informed that it is not accessible to us.

YOEMAN is informed that the documents he sends us have been put in the hands of the Chief of Police.

IN answer to several inquiries we state that we do not know who manufactures the best apparatus for condensing milk.

A CORRESPONDENT at Murfreesboro, Tenn., asks where he can buy a stone-crushing machine, price, etc. We do not know.

A SUBSCRIBER, Rock Co., Wis., is informed that the book named is sold by subscription only, by the Hartford Publishing Co., Hartford, Ct.

THE Kansas Legislature is urged to establish an Arbor Day in that State, as Nebraska has done. Other States might profitably follow the example.

E. M. JONES is informed that we do not know what portable hay-press is most used hereabouts; but we refer him to an advertisement of an excellent one in RURAL of Nov. 23, page 343.

OUR correspondent who asks what we think of lands in Caroline Co., Mo., is informed that we know nothing about that locality; and he is advised to write to Land Commissioner, Illinois Central Railroad, Chicago, Ill., for answers to his other inquiries.

PUBLISHER'S NOTICES.

TO EVERY READER!

Read Our Premium List, on preceding page, and then try for a slice of the "*Good Pay for Doing Good.*"

Send for the Documents!—Our new Show-Bill, Supplement, Prospectus, &c., are *now ready* and will be sent *free and post-paid* to all applicants disposed to form clubs. Send for and use the documents!

The Premium Picture is sent to All who pay $2.50 for a copy of the RURAL one year, and *not to those who only pay the club rate.* Club subscribers can secure the Engraving, however, by adding 50 cts. to the usual club price ($2.) Don't forget this.

Begin Clubs Now!—And to all who want the paper from date, or either one year (at $2.50) or 15 months (at $3) from Oct. 1, we will send the paper accordingly, with Premium Engraving post-paid. The whole club can start at one time, or part Jan. 1st and part earlier. Note this fact.

Premium Picture Now Ready!—Agents and Subscribers will please note that our Premium Engraving is *Now Ready*, and that copies are promptly mailed, post-paid, to all entitled. We are now filling all orders on day of reception, and think we shall be enabled to do this through the season, so that no one will have to wait weary days or weeks for the Beautiful Premium Picture.

"Progress and Improvement."—MOORE'S RURAL for 1873 will be better than ever before, in both CONTENTS AND STYLE. It will appear in a NEW DRESS of Clear and Beautiful Copper-Faced Type, and present other **Decided Improvements.** Agents and subscribers will please note this, and if they tell their friends, so much the better.

AGENTS

May learn something greatly to their advantage and obtain specimens and full particulars free, by addressing WOOD'S LITERARY AND ART AGENCY, Newburgh, N. Y.

HORSE EPIDEMIC.

A PHYSICIAN in a communication to a Buffalo paper about the Horse Epidemic, says:—"Externally I used and would recommend Dr. Trask's Magnetic Ointment to the throat, around the ears and on the forehead. This ointment contains tobacco and lobelia, and operates upon the mucous glands of the head and throat by causing an increased flow of secretion from them, at the same time by its relaxing effect removing the stricture and giving almost instant relief to the cough and breathing." It is kept by all Druggists.

Modes and Manners.

FASHIONS IN LINGERIE.

In *lingerie* there are numbers of dainty novelties which add much to the completeness of a lady's toilette. In the most part these can be fashioned only by experienced fingers, as their charm depends on the perfection of their making. The workmanship should be as delicate as the lace.

Collars.

Linen collars retain their place. The newest style is the standing collar with points turned down. The different sizes and shape of the points furnish the variety. Many are simply stitched; others are embroidered with a little sprig. A single collar costs 12½ cents; with half muslin handkerchief attached, they are sold for 16 cents. The only form of turn-down collars is composed of single linen with a hem of half an inch plaited all about the neck, with points in front and narrow in the back. Sometimes these are plain, but are prettiest edged with patent Valenciennes, which washes as well as the real. Undersleeves come to match these, the set costing 75 cents to $1.25. Embroidered sets are very handsome this year. They are used for demi-toilette. The prices range from $3 to $6. They are larger than linen collars, with deep, turned-over points. The collars are fastened on chemisettes, with three plaits in front, with little sprigs of embroidery down the center. The newest designs are accompanied by pearl slides at the neck and on the cuffs.

Lace sets are still worn; they turn over the tie in the back and are finished with jabots and medallion in the front. They cost from $2 to $10. Fichus and capes are found everywhere. They are made of Valenciennes inserting lace and embroidery. The newest styles are of inserting placed perpendicularly, united by embroidery, and finished with a crimped ruffle of lace. The prices are from $14 to $25. They make a handsome dinner dress of a black silk. These fichus are to be found also in point applique and Chantilly lace, but the Valenciennes come more nearly in reach of our purses. It is almost needless to say that the beauty of these depends on the quality of the lace. Unless genuine lace is used, white tulle is to be preferred. Fichus of tulle can be made in plaits or puffs. Tastefully trimmed, they make a fine effect in relieving a costume.

Neckties.

These are universal. Different houses are constantly bringing out new designs. We have plaids, embroideries, Roman ends, fringe knotted and loose lace, and everything that can be used for trimming purposes. After all, the best are those of twilled silk, which are soft, rich, come in every possible shade, and cost from 75 cents to $1. Very beautiful ties are made of muslin with lace ends: or medallions of embroidery surrounded by lace. They cost from $2 to $6, and can be done up. Ingenious ladies can readily fashion these for themselves. Very neat is a muslin tie with a simple Valenciennes edge. The beauty of these ties is their freshness. One of the most popular novelties is the three-cornered handkerchief of twilled silk, plain or plaided, which is loosely knotted about the shoulders. They are either fringed all around or on two sides. They cost $3, and come in all colors. Spanish scarfs are used for the same purpose. They are two yards long, a half a yard wide, and made of Spanish lace. They are very pretty over colored dresses. Very pretty substitutes can be made of black silk net edged with thread lace half a finger's length deep. These in the stores cost $6 and $8.

The plaited net, which comes in all sizes, is very much used instead of collars and undersleeves. The double plaitings are very pretty for long, slender necks; it is 65 cents a yard. The wide is worn to turn down, and is very soft and pretty in effect. It is also used in half open and Marie Antoinette sleeves.

Jewelry.

The approach of Christmas brings out the newest designs in jewelry. We shall not attempt to speak but of those whose prices are moderate. Gold sets are heavy, massive and in antique designs, composed of gold in different colors. For example, there will be a bar of dead gold clasped by bands of polished gold with pendants adorned with wreaths and trimmings of yellow and Roman gold. Such sets are valued from $50 to $100. Onyx and gold come in the same designs and at about the same prices. Cameos are largely used, and are very expensive. A cameo should be a work of art, and as much attention paid to the cutting and design as to the execution of a picture or statue. A fine cameo is independent of the setting, and remains superior to fashion. In stones, not speaking of gems, turquoise is the popular caprice. The designs are very graceful, and the blue very becoming to many styles. Very handsome sets can be bought from $75 to $100. In buying turquoise it is very desirable to get, if possible, a complete set.

Bracelets are heavy and broad. Dead gold is the most fashionable, but very barbarous. The handsomest sets cost $200. Very pretty bracelets, of a basket-work, are $60. Black enamel, edged and traced with gold, are very pretty in themselves and very becoming; they cost $40 and $60. Narrow, chased bracelets are $35 and $40. Bracelets with stones and pearls have the stones set singly in bars or parallel lines. A set of turquoise and pearls costs $200. A new catch is called the Roman slide. A bar of gold slips through holes on either side, making also an ornament. It is a great improvement on the treacherous springs and chains that have caused the loss of so many valuable bracelets.

Rings.

Large rings are most popular for ladies and gentlemen. The desire is for strange stones—jasper, sard, aqua marine, chrysoprase, are the most desirable. They are all cameos, with antique heads, and often surrounded by little brilliants. Among the most unique is a bar of aqua marina caught by gold rings set with tiny brilliants; price, $80. Another was two deep yellow topazes divided by diamonds; again, a pink topaz with diamond points. A new green stone is the Peredo; it is set with two large pearls. Onyx cameos are the most chaste. The form of all these rings is oblong or square; the oblong are very becoming. A pink cameo or chrysoprase, delicately cut, is one of the handsomest of rings; such cost $28, $30 and $40. Square rings are formed of parallel rows of pearls with turquoise, emeralds or rubies; they are very unique. Diamonds and pearls are set as solitaires or perpendicularly. Engagement rings, or diamond solitaires, are three stones set in gold. Clusters are no longer worn.

Jet and Shell

are both very fashionable. Sets of English jet are very much worn. The handsomest are in finely cut rays, and cost from $3 to $6. French jet comes in bars with a network of pendants; cost, $4. Necklaces are from $2 to $13 in jet. In shell, with pendant, $9 and $10. Pins for the hair are much worn; they are of all styles—stars, balls, butterflies and beetles—and cost from $1 to $10. They are desirable not only as ornaments but as pins for head-dresses.

The high combs of our grandmothers are now in use. They are in both shell and jet. Very dainty ones of cut jet cost from $2.50 to $5. Shell are more expensive. They are very stylish and becoming to the present fashion of wearing the hair, which is high and compact, with puffs and curls massed above the forehead.

For information, thanks are due JAMES M'CREERY & Co., STEVENS & Co., and GEORGE LISNER.

Kerchiefs and Fichus.

THE dinner toilettes of black and rich dark silks worn by middle-aged and elderly ladies are relieved by snowy kerchiefs of crepe lisse, edged with point duchesse lace. The kerchief is a square, doubled in three-cornered shawl shape, worn low on the shoulders, and caught in pointed pleats back and front with a knot of colored faille ribbon or China crape; price $20. For light mourning lisse kerchiefs are simply hemmed on the edge with Quaker-like plainness, or else bordered with smoothly folded pleats. Twilled silk kerchiefs of the stylish dull colors, edged with knotted fringe, are worn close about the neck with street toilettes of black silk.—*Harpers' Bazar.*

"SEE MY PETS!"

The Literary World.

NEW PUBLICATIONS.

Jersey, Alderney and Guernsey Cow.

WE have a volume with this title, published by Porter & Coates, Philadelphia, Pa., which gives the history, nature and management of this breed, showing how to choose a good cow, how to feed, to manage, milk and to breed to the most profit. This is a pretty little volume, compiled from the writings of others on this subject, by WILLIS P. HAZZARD. It does not contain anything new, but is a compend of what has been written concerning the breed, and is, to this extent, valuable to those who seek for knowledge upon the subject matter of the volume.

Force. By JACOB ABBOTT. New York: Harper & Bro.'s.

THIS is an instructive little volume. It is full of facts and principles of a practical character. It is handsomely illustrated, and the instruction is contained in narrative form and dialogue. It is a good book for school libraries, for reading in schools, and for the family table these Winter evenings. It treats of crank motion, mechanical force, the transfer of force by pulleys, bands, and gearing, of the mill, of falling force, heat, the four circuits of solar energy, science and sentiment, the sun, detonations and explosions, force in relation to time, etc., etc. It is a good book to give a boy as a Christmas present.

Transactions of the Illinois State Hort. Society for 1871.

WE have received from the Secretary, O. B. GALUSHA, a handsome volume with this title, including the proceedings of the Sixteenth Annual Meeting at Jacksonville, Ill., and the proceedings of the Fifth Annual Meeting of the Northern Illinois Hort. Soc. It also contains an admirable steel portrait of our old friend and enthusiastic horticulturist, the late lamented C. R. OVERMAN—one of the pioneers in Illinois Horticulture and of the original members of the liveliest and most influential State Horticultural Society in the Union. This volume embraces papers and discussions, facts and experiences that should be in the hands of and studied by every Western Horticulturist. And it may be obtained by becoming a member of the Society and remitting $1.30 for membership to O. B. GALUSHA, Cor. Sec'y, Morris, Ill. We value the volume as a book of reference most highly.

Transactions of the Department of Agriculture of Illinois for 1871. By A. M. GARLAND, Sec'y.

THIS volume is not so large as some of its predecessors, since the transactions of the State Horticultural Society are not included in it. It embraces the usual record of Transactions of the State Society, a few essays which might have been omitted, so far as they pretend to impart any new information on Agriculture, and the recent laws affecting agriculturists directly, which are wisely published in this volume. Our thanks are due the Secretary for this volume.

The Fruit and Fruit Trees of America; Or, the culture, propagation and management in the garden and orchard of fruit trees generally, with descriptions of the finest varieties of fruit, native and foreign, cultivated in this country. By A. J. DOWNING. Second revision and correction, with large additions and an appendix of 1872, including many new varieties. by CHARLES DOWNING. New York: John Wiley & Son.

THIS work includes only apples. It is portable, as compared with the previous edition complete, published in 1869. Since the issue of that edition Mr. CHARLES DOWNING has visited California, and gives us the results of his observations there. In an appendix are given descriptions of about one hundred varieties of apples not heretofore included in this work. The volume, with its revisions and additions, was needed, and will be welcomed by pomologists.

The Old Curiosity Shop and David Copperfield. By CHARLES DICKENS. New York: Harper & Brothers.

THESE are the Household editions of these stories by the great novelist, splendidly illustrated and admirably printed. Those who have not got DICKENS' works are advised to buy this edition.

IF.

BY DE FORREST P. GUMMERSON.

If in my grave, dear love, I should be sleeping,
With daisies yellow-eyed above my bed;
And you should stoop to gather one, while weeping,
I think, dear love, that I should hear your tread—
I think I should, Dear Love!

If, when the stars shone out in the blue sky,
You, sighing, wandered forth alone,
I think my spirit would be very nigh,
And claim you as its own, dear one—
I think it would, Dear Love!

If, when the Autumn leaves should fall,
You had grown weary—longed to die;
I think that I would hear your call,
And guide you to my home beyond the sky—
I think I would, Dear Love!

Our Story-Teller.

TOM FOSTER'S WIFE.

I HAD just returned from a two years' stay in Europe, and was sauntering down Tremont street in the golden September morning, when I saw my old friend, Tom Foster, get out of a horse car a few steps in advance of me. I knew him in a moment, though we had hardly met since we were at Exeter Academy together, ten years before—room-mates and blithe companions until we parted—I to go to Harvard and he to enter his father's store, the well-known house of Foster & Co., Pearl street. He was a merry, hearty, practical fellow, clear-skinned and robust as an Englishman, self-reliant and enterprising as New Hampshire birth and Boston training could make him. I always liked him; but he plunged into business and I into study, and so, without meaning it, we had almost lost sight of each other. He was an only child, and his parents spent their Summer at their homestead in Greenland, near Portsmouth, and their Winters in Boston.

As I said, I knew him in a moment. He had grown tall and stout, but the boy was still in his face, and with a flush of early feeling I sprang towards him and caught him by the arm.

"Tom, how are you?"

He looked puzzled for a moment, and then, bursting into a laugh, he seized my hand in his strong grasp, and exclaimed:

"Why, John Ralston! is this you? Where did you come from? I'm glad to see you, my boy. Why, I haven't set eyes on you since we made that trip to Nahant, in your Freshman year. The truth is, father was so poorly for a long time that I had everything to see to, and felt as if the world was on my shoulders. I did hear, though, about your college honors and your going to Germany, and I've often thought of you lately, and wished to see you. Why, Jack, in spite of my weight and your beard and broad shoulders, I can't realize that ten years are gone since we were at Exeter together. We must talk over old times and new. When did you get back, and what are your plans?"

"I came yesterday, and shall remain in the city, on account of a business matter, until Tuesday. Then I am going home."

"Well, now, this is Saturday, and you can do nothing after three o'clock. Come and spend Sunday with me in the country. I want you to see my wife."

"Your wife! Are you married, Tom?"

"Married nearly a year," said he, with a smile.

"You don't look very solemn over it."

"Solemn! It's the jolliest thing I ever did in my life. Meet me at the Eastern Depot at four o'clock, and I'll tell you all about it on the way down."

We parted at the Winter street corner—he to go to his store and I to the Parker House.

"How handsome Boston has grown," said I, glancing at the fine buildings and the Common, beautiful in the September sun.

"We think it a nice town," he replied," speaking with the moderate words and the perfect assurance of the Bostonian, to whom that city is the sum of excellence and delight. "Remember, four o'clock." And he disappeared in the crowd.

"Tom married!" I said to myself, as I walked along. "I dare say it is to his father's pretty ward, Clara Maitland, whom I saw when I spent the day there, eleven years ago. I remember what long curls she had, and how fond she seemed of him. Yes, I dare say it's to Clara. I hope, though, she hasn't grown up one of those delicate young ladies, good for nothing but to display the latest fashions, and waltz a little and torture the piano. Better some rosy, sturdy German Gretchen than a poor doll like them. It would be a shame for poor Tom, with his splendid physique and vigorous brain, to be tied for life to such a woman?" And then, turning down School Street, my thoughts wandered off to a blue-eyed girl I had loved for many a year—a girl who was not satisfied with the triumphs of the croquet-ground but who could send an arrow straight home to the mark; and climb the hills with me, her step light and as free as the deer in the glade below; and hold a steady oar in the boat on the river; and swim ashore, if need be; and then, when walk or row was over, who could sit down to a lunch of cold meat and bread and butter with an appetite keen as a young Indian's after a day's hunt; yes, and who knew how to be efficient in the kitchen, and the rarest ornament of the parlor. How impatient I was to see her, the bewitching maiden whom a prince might have been proud to marry. And again I said to myself, as I went up the Parker House steps, "I do hope Tom hasn't made a fool of himself!"

Four o'clock found me at the station, and a moment later in walked Tom, carrying a basket filled with Jersey peaches. They don't grow in Greenland," said he, tucking a paper down over the fruit. "Come this way." I followed him, and we had just seated ourselves comfortably in the car when the train moved off.

"Now for the story, Tom," said I, as we crossed the bridge and caught the cool breeze from the sea. "But I'll guess beforehand the girl you married. It was Clara Maitland."

A shadow passed over Tom's face. "Clara has been dead four years," said he. "She inherited consumption from her mother. We all did everything for her—took her to Minnesota and Florida; but it was no use. She didn't live to see her eighteenth birthday."

"Poor Clara! She loved you dearly. Then I suppose you chose some Boston girl of your acquaintance."

"Jack, you couldn't tell who Mrs. Tom Foster was if you would try from now till morning. I shall have to enlighten you." And, moving the basket to one side and settling himself in his seat, he went on:—"You know I have the misfortune to be an only child. After I was twenty-one, father and mother began to talk about my marrying. I have plenty of cousins, you know, and we always had young ladies going in and out of the house; but while Clara lived she was company for me, and after she died I was full of business, and didn't trouble myself about matrimony. I tell you the truth, Jack, I don't fancy the girls. Perhaps I was unfortunate in my acquaintances; but they seemed to me all curls and flounces and furbelows, and I would as soon have thought of marrying a fashion-plate as one of those elaborate creatures. I don't object to style; I like it. But you can see fine gowns and bonnets any day in the Washington street windows; and my idea of a woman was one whose dress is her least attraction.

Do you recollect my father's former partner, Adam Lane? He's a clever old gentleman and a millionaire, and father has the greatest liking and respect for him. He had two daughters, one married years ago; and the other, much younger, father fixed upon as a desirable wife for me. I rather think the two families had talked it over together; at any rate, Miss Matilda came to Greenland for a long Summer visit. She is an amiable girl; but so petted and spoiled that she is good for nothing—undeveloped in mind and body. She looked very gay in the evenings, attired in the latest importations. But she was always late at breakfast; she didn't care to ride on horse-back; she couldn't take a walk without stopping to rest at every stone; and once, I asked her if she had read the account of the battle of Sedan, she looked up in her childish way and said, "No, Mr. Foster. Newspapers are so tiresome." Bless me! what should I do with such a baby?

A year ago this Summer, I was very much confined at the store; and when August came, instead of spending the whole month at home, I thought I would have a little change, and so I went down for a fortnight to the Cliff House, on —— Beach. It is a quiet, pleasant resort, and you'll always find from fifty to one hundred people there during the season. The landlord is a good fellow, and a distant relative of mine. I thought he looked flurried when I went in, and after a few minutes he took me to one side and said:

"Tom, you've come in an unlucky time. I had a very good cook, that I got from Boston, at twenty dollars a week; but she's a high-tempered woman. Last evening she quarreled with her assistants, this morning the breakfast was all in confusion, and now she's packing her trunk to leave by the next train. In two or three days I can probably get another one down in her place; but what we're to do in the meanwhile, I don't know.

"But, Norton," said I, "isn't there some one near by or in the house who can take it?"

"I doubt it," he replied. "I've half a dozen girls from the vicinity, doing up-stairs work—one of them from your town, the best waiter in the dining-room. But I suppose all of them would either be afraid of the responsibility or think it beneath them to turn cook; though they would have plenty of help and earn twenty dollars where they now get three."

"Who's here from Greenland?" I asked, for I know something of almost every one in the place.

"Mary Lyford."

"Mary Lyford? A black-eyed, light-footed girl, about twenty years old, with two brothers in Colorado and her father a farmer, over towards Scratham?"

"Yes, the very same."

"Why, she's the prettiest girl in Greenland—at least I thought so two years ago, when I danced with her at the Thanksgiving party in the village; and I heard last Fall that she took the prize at the Manchester Fair, for the best loaf of bread. But why is she here?"

"Oh, you know farmers haven't much ready money, and I suppose she wanted to earn something for herself, and to go to the Beach, like the rest of us. You said she took the premium for her bread. I believe I'll go into the dining-room and propose to give the cook's place to any one of the girls who would like it and who feels competent to take it. I must do something," and, looking at his watch, he went out.

Ten minutes later he came back, clapping his hands, and exclaimed:

"Mary Lyford says she'll try it."

"Hurrah for Greenland!" cried I. "Isn't that plucky? By Jove, I hope she'll succeed, and I believe she will."

"You mustn't expect much to-day," said Norton. "Things are all topsy-turvey in the kitchen, and it'll take some time to get them straightened out."

Just then a new arrival claimed his attention, and with a serener face, he turned away.

Dinner was poor that day; supper was little better. And in spite of Norton's caution, I began to be afraid that Greenland was going down. But the next morning what a breakfast we had—juicy steaks, hot potatoes, delicious rolls and corn bread, griddle-cakes that melted in your mouth, coffee that had lost none of its aroma in the making. Thenceforth every meal was a triumph. The guests praised the table, and hastened to their seats at the first sound of the bell. Norton was radiant with satisfaction, and I was as well pleased as if I had been landlord or cook myself. Several times I sent my compliments and congratulations to Mary, but she was so constantly occupied that I never had a glimpse of her till the night before I was to leave. I was dancing in the parlor, and had just led a young lady of the Matilda Lane stamp to her mamma, when I saw Mary standing with the dining-room girls, on the piazza. I went out, and shaking her hand, told her how interested I had been in her success, and how proud I was to find a Greenland girl so accomplished. She blushed and thanked me, and said in a modest way, that she was very glad if all were suited; and then Norton came up and expressed his entire satisfaction with what she had done. As she stood there in a white pique dress, with a scarlet bow at her throat, and her dark hair neatly arranged, she looked every inch a lady.

"Do me the favor, Miss Lyford," said I, "to dance the next cotillon with me?"

"Ah! Mr. Foster," she replied, looking archly at Norton, "that isn't expected of the help."

"The help!" I said, indignantly. "You are the queen of the establishment, and I invite you to dance, and so does Mr. Norton."

"Certainly I do," he answered. "Go and show the company that you are at home in the parlor, as well as in the kitchen." So, smiling and blushing, she took my arm.

"Didn't we make a sensation when we went in! Perhaps there was no fellow with a better 'social position' (you know the phrase) than I; and I had been quite a favorite with the ladies. You should have seen them when we took our places on the floor! Some laughed, some frowned, some whispered to their neighbors, but I paid not the slightest attention to it all, and Mary looked so pretty, and went through the dance with such grace and dignity, that before it was over I believe all regarded her with admiration. I didn't wait for comments, but escorted her out as if she had been the belle of Boston."

"Good-night, Miss Lyford," I said, when we reached the hall. "I am going in the morning, but I shall see you again when you get back to Greenland."

"Good-night, Mr. Foster," she replied. "I thank you for your kindness." Then she added, laughingly, "Have you any orders for breakfast?"

"Why, yes. I should like to remember you by a plate of such muffins as we had yesterday."

"You shall have them, sir," she said, as she disappeared in the doorway. And have them I did.

"Three weeks later Mary came home to Greenland, with more than one hundred dollars in her purse and a fame that was worth thousands. I went to see her at her father's house. I found her every way excellent and lovely; and the end was that at Christmas we were married."

"Glorious!" I exclaimed. "Give me your hand, Tom! I was afraid you had been taken in by some Matilda Lane."

"Do you think I'm a fool?" said he.

Then I told him of my own choice, and I was still talking when the train stopped at the Greenland depot.

We soon arrived at his hospitable home. His wife was all he had pictured her: a refined, intelligent, handsome woman, who would develop and grow in attractiveness every year of her life. After a merry evening in their pleasant parlor, I went to bed and dreamed that the millennium had come, and that all women were like my blue-eyed girl and Mrs. Tom Foster.

THE PARSON'S WIG.

A WORTHY Parson had, as worried parsons often do, become bald-headed, thought it no harm to assist nature in her tonsorial operations, procured a wig. His old-fashioned congregation was greatly exercised thereby. Some thought it very worldly for a parson to wear a wig at all, while some thought the shape "horrid." Others thought the hair should be shorter in front, some at the sides, and some behind. Finally, the good pastor invited the brethren and sisters to meet him at the parsonage. When they were assembled, he handed his wig to them to trim according to their taste. One clipped it here, another there, and another in a different place, until the poor wig looked like anything but a head of hair. When handed back to the parson he examined it carefully and then gravely said:—"Brethren and sisters we may safely worship this, for it is the 'likeness of nothing in the heavens above, on the earth beneath, or the waters under the earth.'"

Sabbath Reading.

"HE CARETH FOR THEE."

SLOWLY the dusky shadows
Gather about the room;
Fainter the firelight flashes—
Deeper the evening's gloom.

I sit in the darkness dreaming,
Till the night is waning late;
While over my spirit stealing,
The shadows are dark as fate.

Never a gleam of sunshine
Pierces the darkness through;
In the stormy skies above me
Never a strip of blue!

Looking for starry blossoms,
Toiling for golden sheaves—
Weary and sad I gather
Only the withered leaves!

The way grows dark before me,
And I turn aside to weep
O'er the low green graves, where softly
The happy by-gones sleep.

Do the weary-winged birds at even,
Panting for shelter and rest,
Out in the wild, wet weather,
Long for the old, warm nest?

Wilder the night is growing,
And never a star I see;
But I know that a loving Father
Careth for them and me.

[*Orlie Smith.*

THE WIDOW OF NAIN.

IT was morning: the sun had risen in gorgeous splendor, and shone brightly o'er one of the fairest landscapes of earth; o'er the lawn, (stretching far Southward, with its rich and varied hues,) to the horizon, where earth and sky seem to meet, Northward to the lofty summit of Mount Tabor, which, though dim in the distance, was gilded with gold.

A Roman soldier, tall and helmed, stood at the gate of Nain. A few hours later and it was almost noon; the busy tread of the mart had subsided; but the soldier still leaned upon his spear and dreamily kept his idle watch. Perhaps his musing was broken now and then, by the solitary foot of some poor mendicant, whom he probably cursed for being a Jew.

'Twas now high noon; the dull, low murmur of a funeral procession went through the city. The sentinel shook off his slumber and gazed up the wide street. They came on, bearing the body on the bier. The broad gate swung on its massive hinges; the bearers passed on with their burden. There was only one mourner; close behind the bier followed an aged woman; her short steps faltered with weakness, and a broken moan fell from her lips; she wept convulsively as her heart bled afresh.

The pitying crowd followed apart, and no one spoke to her. She had no kindred, but had lived alone with her son, who was her *all*, and the *only* tie she had in the wide world, and he was *dead*.

JESUS drew near to Nain, as they came forth from the gate; the beaded sweat stood on His brow, and His sandals were soiled with the dust of travel, for he had come, since sunrise, from Capernaum, tarrying not at Bethesda's pool, Hishon's silver springs, Tabor's side, or in the cool shade of Genessareth, by the Sea of Galilee, where the weary traveler might have rested till eve, but he pressed on to Nain.

From the city-gate the crowd followed the stricken mother. They approached the burial place, she clasped the pall with a gasping sob; but presently they came where JESUS stood by the way. He *looked* upon her, and his compassionate heart was moved. "Weep not," He said; and they stayed the bier, and at His bidding laid it at His feet. He gently drew the pall from out her grasp and laid it back in silence from the dead. The mute throng drew near, and gazed upon His calm looks with troubled wonder. A minute's space He stood and prayed, then taking the cold hand of the young man He said "Arise." And immediately his breast heaved with respiration, a sudden flush mantled his fair young face, his lips parted, and with a murmur of his mother's name he trembled, and then sat upright. While the mourner fell upon his neck and wept for joy, JESUS proceeded calmly on his way to Nain.

CONSECRATION.

MCLEOD says:—Consecration, or simple yielding of ourselves to God, in itself occupies little time—no more necessarily than the uttering of an intelligent "Yes" or "No," whatever the preliminaries that may lead to this point or the momentous consequences that may follow from it. But, however easy this choice may seem to those who never seriously tried to make it, it requires the greatest possible effort, unless, by the grace that worketh when and how God willeth, the man has been so slowly educated into it, that at no period of his life has he experienced a great and conscious struggle between light and darkness, between God and his own soul. But most men have imperceptibly formed the mental habit of indifference to the claims of God.

IT is with the singing of a congregation as with the sighing of the wind in the forest, where the notes of the million rustling leaves, and the boughs striking upon each other, all together make a harmony, no matter what be the individual discords.

Ladies' Port-Folio.

[A NOVA SCOTIA LADY who recently received a copy of our Premium Engraving, "*Birth-Day Morning*," sends us the following lines, which came to her mind while looking at the charming picture:]

"BIRTH-DAY MORNING."

A PICTURE beautiful, and rare,
And deep with meaning fraught.
'Tis morning; and the sunlight fair
Rests on the maiden's wavy hair,
Brow, neck, its smile hath caught;
While ling'ring with a loving grace
It 'livens all the scene.
It beams across the old man's face
And finds itself a hiding place
The leaves and vines between.

O, maiden, midst those blooming flowers
Thou art the brightest there;
Ah! dost thou dream of chilling showers,
Of weary days, and darksome hours,
Amid a scene so fair?
Those roses gathered to thy breast
Are not more bright than thou;
They quickly fade away to rest;
Thy future still remains unguess'd—
Thy fate thou canst not know.

And he who culls the gift for thee,
How earnest is his heart!
In his bronzed face we plainly see
That life may not all sunshine be,
But care too hath its part.
Fain would he pluck from out thy way
Each sharp, obtruding thorn;
Fain would he that thy feet might stay
Within the bright and sunny ray
That gilds thy birth-day morn.

Sheffield Mills, Nova Scotia, Nov., 1872. VIOLET.

REPLY TO H. H.

ALTHOUGH we are denied the ballot-box, we are granted a still more powerful weapon—the free use of the pen, providing it is not too free. And I wish to free my mind a little in regard to "H. H." and "SALLY TEAZLE." Although not a farmer's wife, I was a farmer's daughter, and have a very extensive acquaintance with farmers' families; and in nearly every neighborhood meet with one or more of SALLY'S description; but in most respects they are the exception and not the rule. In regard to eating in the kitchen with all the help seated at the table, and washing in the same basin and drying on the same towel, I am sorry to say is the rule; but I think it is practiced, as a general thing, to save work, as most farmers' wives try to get along without help.

I think the example held before us by H. H. is another extreme; and if held up as a pattern for us weakly American women, I despair of ever following it; and I don't think I shall try. To think of a lady so "refined, intelligent and accomplished" making such a drudge of herself is absurd. For any one who knows anything about it will tell you that to take care of the milk and butter from sixteen cows is about all one woman ought to do. She tells us that after "putting her beds airing" she goes down and makes a fire. Where is the hired man, or her husband, that her fire is not built for her while she is putting the beds airing? I never yet had to build a fire when my husband was at home; and then, after doing the work of two women, she "goes out and does a few chores to help her husband! It would look far more sensible for him to send one of the hired men to the house to help her do such work as churning and "feeding the calves." I am fearful if she keeps on at the rate she is going she will soon be a broken-down woman, and will not have the blessed boon of health to confer on her children as her "mother did on her."

Then, to cap the climax, H. H. tells us "she gains a greater degree of love from her husband by being strong." Now, it is my opinion that a man who truly loves his wife, if she is not strong, instead of loving her less will feel a more tender love for her, knowing she has much pain to endure and many pleasures to forego. No man will love his wife less for being weakly, unless he values her for the amount of labor she can perform. It has always been a wonder to me that farmers that keep so many cows and are able to hire so many men in the hurrying time and one or two all the time, should deem it extravagant for their wives to think of having a hired girl; for it would cost less to hire a girl one week than two men one day. I have thought on this subject a great deal, and, for the very reason that farmers' wives are such drudges, I have refused to become one myself. MRS. J. O. G.

DISRAELI'S WIFE.

I CANNOT omit, in this connection, to refer to Viscountess Beaconsfield, the admirable spouse of Mr. Disraeli. Their coming together had a tinge of romance to it. Disraeli was just becoming known as a fashionable novelist and a promising young man of the town, and had written "Vivian Grey." This novel so captivated the lady, who was then married, and was considerably the novelist's senior, that although she never had seen him she entered into correspondence with him, which led to a close and affectionate friendship. Her husband dying several years after, Disraeli sought and won her hand. They never have had children, but a happier, more faithful, more devoted couple does not exist. Mrs. Disraeli always took the keenest interest in her husband's career, and he once said in one of his matchlessly graceful speeches that whatever success he had had he attributed to the constancy, affection and encouragement of the partner of his life.

On one occasion Disraeli was going to make a speech in the house upon which he counted to make a brilliant effect. When about to speak, any disturbing incident, however trifling, is apt to disconcert and confuse him. Mrs. Disraeli was to accompany him to Westminster, and, her husband having entered the carriage, she was getting in, when her thumb was caught and jammed in the carriage window. Notwithstanding the pain, which increased every moment that the thumb remained under the window, the heroic lady never winced nor stirred till they reached the Parliament House—afraid if she stirred or tried to abstract the thumb, it would disturb her husband, and affect the success of his harangue. Is it any wonder that, when Disraeli, being about to retire from the Premiership, was offered a peerage by the Queen, he declined the honor, but begged her Majesty to bestow the distinction upon his wife.

Thus Mrs. Disraeli became Viscountess Beaconsfield—a name redolent of memories of Burke, and a title which gave her co-equal social rank with the ladies of the most ancient lineage.

One often sees this remarkable pair now in West End quarter, the lady seeming old and frail, the husband young, and jaunty, and spring-galted, walking slowly, for Lady Beaconsfield's health will not permit faster progress. Indeed, this devotion to a wife considerably older than himself, and who has borne him no heirs to his splendid fame and princely fortune, is one of the finest traits of Disraeli's character, and one which has gained him universal respect and esteem in English society, even from those who are wanting in such a domestic virtue.

WOMAN PERSONALS.

THE great dinner-giver in London is Lady Molesworth, widow of the late Sir William, formerly Secretary for the Colonies. This lady's career is curious. Of humble origin, she was educated at the London Academy of Music for the musical profession, and sang at private parties at Rome. There she married a rich, elderly man of good property and family, Mr. Temple West. He died and left her a good income, and she then married Sir W. Molesworth. He was a man of distinguished ability, but shy and retiring, and it is generally thought would never, but for his stirring, ambitious wife, have become a cabinet minister. At his death he left her a life-interest in the whole of his property, worth forty thousand dollars a year. By sheer force of character she has pushed her way to the highest pinnacle of fashionable life, and people who fifteen years ago would have turned up their noses at her are thankful to be asked to her parties.

But those who aspire to the hights of fashion should bear well in mind the pendant to Raleigh's lines:

Fain would I climb,
But that I fear to fall.

If thy heart fail thee,
Do not climb at all.

In common with every other career, the pursuit of fashion has its *desagrements*, and Lady Molesworth has no doubt endured all sorts of snubs and sneers which to the sensitive would be unendurable. Some time since she did a very wise thing. Knowing what folly it would be to attempt to conceal what every one knew—that she had been a professional singer—she boldly took the bull by the horns, and sent a splendid donation to the Academy of Music "in grateful recognition of the great benefits received from it." Seated at her splendid table, with the heir to the throne on one hand and some great potentate on the other, it must be curious for this lady to run back for an instant to the days when with a mean wardrobe and scanty purse, she was eagerly working in the hope of earning her bread by her own efforts.

IN a recent work on "Recollections of Society in England and France," we find the following new account of MARIE ANTOINETTE:

In the bright time just preceeding her unparalleled misfortunes, when at the bijou Chateau of Trianon, she not only cultivated flowers, fished in the lake, milked cows, and invited her courtiers generally to share her pastoral pleasures, but she there acted in private theatricals, and always the part of a shepherdess or a soubrette. In the former character she illustrated Rousseau's rural scenes in a way which, if he had beheld it would mitigated even that philosophic republican's well known sarcasm on royal performers; and she so far overcame the educational or constitutional shyness of her royal husband in his earlier years as even to induce him to take a part on the stage.

When, at fifteen years of age, Marie Antoinette had arrived in France as Dauphiness, she detected so much absurdity in the *ancient regime* formalities forced on her observance by the Duchess de Noailles, the Grand Mistress of the Ceremonies (an ancestress of the present Minister of France at Washington), that she then and long afterward spoke of that august personage by the sobriquet of Madame Etiquette. The following anecdote shows her humor: The scene was in the Bois de Boulogne. Several of the more demure ladies of the court were in open carriages. But the Queen was riding on a donkey, as were various of her younger favorites. The whole cavalcade was stopped, for Marie Antoinette's donkey, having felt a sudden inclination to roll on the green turf, had thrown its royal rider, and she, being quite unhurt, remained seated on the ground, laughing immoderately. As soon as she could command her countenance she assumed mock gravity, and without attempting to rise from her lowly position, commanded that the Grand Mistress of the Ceremonies should at once be brought to her side; and when the lady thus summoned stood, in no good temper, and with dignified aspect, before her, she looked up and said, Madame, I have sent for you that you may inform me as to the etiquette to be observed when a Queen of France and her donkey have both fallen—which of them is to get up first.

Reading for the Young.

THE SUDDEN STORM.

BY ALICIA.

O, MOTHER-BIRD, hasten home to your nest,
For a storm is coming out of the West,
And the winds blow up amain,
Tossing and shaking the lilac tree
Where your pretty nest and your dear ones be,
And the clouds fall down in rain!

So the mother-bird flies home to her nest,
And shelters her darlings under her breast,
And leaves them not again:
For herself no shelter she seeks to find,
But shuts her eyes to the beating wind,
And her feathers drip with rain.

A sermon you preach,
And a lesson you teach,
Of love and constancy,
O mother-bird, on your pretty nest,
Warming your darlings with your breast,
In the heart of the lilac tree!

"STICK TO THE FARM."

A TALK WITH THE BOYS.

BY MARY A. E. WAGER.

I AM quite sure that the more a man knows of life in great cities, the greater emphasis will he give to the title of this article. And I will tell you why.

The majority of country boys are in no sense of the word fitted or prepared for participation in the rivalry and competion of business in the city. They would find themselves as much out of their sphere or groove for usefulness, as a statesman would to be placed in command of a ship. Or to make the illustration more pertinent, they would succeed in the city in about equal measure with the city men who go to the country to get rich farming; and you know how that is.

Hundreds of young men come from the country to the city weekly in search of work. I see them anxiously walking the streets, or standing at the street corners in a brown study. Oftentimes they are robbed of their little store of money; decoyed into hells where in a single hour they learn more of the ways of death than would have come to them in an entire lifetime elsewhere. Ah! but *you* wouldn't be seduced from truth and virtue! Perhaps not; but granting you to be firm as the everlasting hills in righteousness, what could you do to insure success? Can you set type? Can you keep books? Do you understand commercial business? Can you write a book review worthy of the book? What do you know of art, or science, or any one branch of either? Have you a well defined idea, or a half defined idea of just what you wish to do? If so, what qualification do you carry with it? To leave the farm for the city is as foolish and dangerous, in most cases, as to jump overboard far from shore, when you are morally certain you do not know how to swim.

But I do not mean to have you believe that to "stick to the farm" is always the best thing to do." I don't believe in sticking to anything that is utterly distasteful, and which you do not feel "drawn toward," in any sense, either from fitness or sympathy. But in leaving the farm I think it would be wiser to hope for success where competition is moderate, and where your untrained faculties will not be completely overwhelmed by skilful and disciplined workers, every place filled, and all vacancies applied for a decade in advance.

OUR LETTERS FROM BOYS AND GIRLS.

Something About Vermont.

I LIVE in a pleasant little village called East Middleburg, Vt. There is a beautiful river issuing through it. It is an industrious river. It turns a saw-mill, grist mill, a forge, and a sash factory. Its waters are very cold, even late in the Spring, made so by the snow and ice melting high up on the mountains. Sometimes the heavy rains in the Spring will cause the river to overflow its banks, and then it will do damage to both life and property. About five years ago there was a fearful freshet; the water rushed through the streets of our village like a river; it carried away door-yard fences, and some buildings. It was a strange sight to see the cattle, hogs and sheep swimming and swept along by the water. There was a boy, who was a cripple, out of doors when the waters broke through. They surrounded him before he could get away, leaving him on a little island all alone. Above East Middleburg, on the mountains, there is a hotel, called the "Bread-Loaf Inn," which is the resort of summer boarders. A few miles from here there is a little gem of a lake, called Dinnmore. It is higher than the surrounding country. There are some islands in the lake. I went to a picnic on one of them. In the mountains near the lake there are some caves. There is a little schooner called the Nautilus, which belongs to the lake also.

MOUNTAIN PINK.

A Game for Children.

DEAR EDITOR:—I am eleven years old and live on a farm. My father takes your paper, and I like to read it very much. As I was reading the RURAL NEW-YORKER I saw a letter from a little girl wanting to know some new games. Here is one called "My Lady's Toilet." The name of an article of dress is given to each one of the company, chairs are placed for all the party but one, so as to leave one chair too few. They all seat themselves but one, who is called the Lady's Maid, and stands in the center, when the Maid calls for any article of dress. The one who has that name instantly rises, repeats the word, and seats herself again. For instance, the Maid says, "My Lady's up and wants her dress." "Dress," says the one who has that name, rising at the time she speaks, and sitting down again as quickly. "My Lady's up and wants her brush." "Brush," says brush, jumping up and repeating." Her handkerchief, watch, and chain," says each one of three, rising together. "My Lady's up and wants her whole toilet!" When this is said, then every one must jump up and change chairs, and, as there is one chair wanting, of course it occasions a scramble, and whoever is left standing must be Lady's Maid and call to the others as before.

MARY O.

Fond of Warnings.

I WENT to school last Winter, and intend to this Winter. I have not got punished much late years, but I can remember when I could not have said the same. If I came home and told of the teacher's whipping me, because Mr. Somebody's girl did something dreadful, (terrible innocent wasn't I? Well, I always was an innocent child,) I tell you I didn't get petted much when I came home, or talked to in this style:—"There, you little darling; she is the worst teacher that ever came into that school house! You may bring your books right home, and you needn't go another day." No, I didn't get abused in that way, but I will tell you what I did get: I got another warm as good, if not better, than the one previous, which I richly deserved. And do I now disrespect my mother any for those warmings? No; I look back on my errors and thank her for it. EMMA D.

Cake and Cakes.

I HAVE pieced four quilts. I have one quilt with 666 pieces, and there are not two pieces in it alike. It is called the Odd-Fellow. I can do most any kind of housework. Can any of the girls tell me how to make a what-not out of spools. I like to ride on horse-back, and on a gallop. I have got a little colt that I expect to ride when he gets large enough. His name is Jet. I will send a recipe for clove cake:—One cup molasses, 1 cup sugar, ½ cup butter, 3 eggs, 1 cup raisins, 1 teaspoonful cloves, two teaspoonfuls cinnamon, 1 nutmeg 1 teaspoonful soda dissolved in ½ cup milk, 3 cups flour, chop the raisins fine. This cake is better when two weeks old than when new. MYRTIE BURN.

The Puzzler.

ILLUSTRATED REBUS.—No. 19.

☞ Answer in two weeks, with the names of those who send correct answers up to that time.

BIBLICAL ENIGMA.—No. 1.

I AM composed of 90 letters:
My 6, 10, 44, 16, 53, the son of Amram.
My 17, 79, 3, 12, 76, Bath Sheba's husband.
My 29, 31, 43, 19 is a plain in Babylon, where Nebuchadnezzar set up a golden image.
My 25, 8, 70, 36, 31, a capital of Bashan.
My 42, 13, 32, 2, the valley in which David slew Goliath.
My 50, 4, 21, 9, grandson of Adam.
My 22, 56, 37, 1, 84, 55, a governor of Judea.
My 26, 52, 60, 84, 59 was a Macedonian.
My 49, 27, 14, 74, 28, 23, 24, 81, the Hebrew name for Calvary.
My 35, 57, 70, 85, 42, Lot's grandfather.
My 5, 62, 41, 31, 44, 53, 76, the wife of Abraham.
My 11, 38, 55, 69, a symbol of subjection.
My 31, 6, 5, 53, 78, 90, 64, 79, 15, a cloth for hangings, ornamented with needleworks.
My 7, 40, 8, 76, Methuselah's grandson.
My 20, 72, 18, 47, 61, 10, 45, a proselyte of Antioch.
My 89, 84, 63, 77, 65, 89, the mother of Timothy.
My 30, 31, 32, 75, 78, 70, 67, 87, 66, 71, a division of soldiers.
My 39, 40, 70, 88, 17, 73, 81, 87, 84, 9, came from Corinth to visit Paul.
My 46, 36, 44, 70, 50, 88, a sort of weazel.
My 54, 78, 82, 52, 73, the grandson of Cush.
My 83, 85, 88, 25, 86 is confusion.
My 83, 84, 12, 3, 33 was given to the Israelites for food.
My whole is the Silver Rule. J. A. S.

News of the Week.

HORACE GREELEY.

HONORS TO HIS MEMORY.

THE OBSEQUIES.

On Saturday, Nov. 30th, the remains of Hon. HORACE GREELEY were brought to New York, inclosed in a black walnut coffin, mounted with silver, and taken to the house of SAMUEL SINCLAIR, Esq., the publisher of the Tribune, where they remained during Sunday and Monday, the 1st and 2d inst's. No one but intimate friends were allowed to view them. On Tuesday, the 3d inst., at an early hour, they were taken to the City Hall to

LIE IN STATE.

They were placed in the Governor's Room, where the remains of Mr. LINCOLN reposed on their way to Springfield. The room and the City Hall was heavily draped in mourning, a motto over the balcony reading as follows: "We Remember with Pride His Busy Life." Flags all over the city floated at half-mast. The Tribune building was draped in black. The public was admitted at 9 o'clock A. M., and a constant stream of citizens, to the number of 40,000, passed through the hall until 10 P. M. The guard of honor for the day contained such names as those of Gen. JOHN A. DIX, Mayor elect HAVEMEYER, THURLOW WEED, A. T. STEWART, WM. CULLEN BRYANT, PETER COOPER, WM. B. ASTOR, Gov. HOFFMAN, and many others. All classes of people flocked to see the remains of Mr. GREELEY, and great crowds surrounded the City Hall when his remains were removed.

THE OBSEQUIES.

Wednesday, the 4th, was a bright and beautiful day in New York, and the whole population of the city, as well as Brooklyn and the neighboring cities, prepared to attend the funeral. Business was nearly suspended, and at an early hour the people crowded the line of the procession. No such sorrow and popular emotion has been seen since the funeral of President LINCOLN. The line of march, from Forty-fifth St. to Greenwood, a distance of some six miles, was densely packed with spectators, who could only be estimated by hundreds of thousands. The whole of the way was lined with police, 250 being at the church, and the same number at the Battery, to keep the streets clear.

AT THE CHURCH.

The funeral ceremonies were held at Dr. CHAPIN'S church, corner of Forty-fifth street and Fifth avenue. The house holds but 1,500 people, and so great was the desire to be present, only intimate friends, relatives, employees of the Tribune, invited guests, and representatives of societies could be admitted. Tickets were issued for these.

THE DECORATIONS.

The church was heavily draped in black, inside and out, and was profusely filled with flowers, sent by societies, friends, the city, and various organizations. Chappaqua sent a shield in flowers, the Common Council of the city sent in the city arms in flowers, the ladies of the church erected a beautiful arch of flowers over the pulpit, the Mayor, the various clubs, and many personal friends, sent rare and remarkable designs in flowers, until the altar of the church and Mr. SINCLAIR'S house were filled with them.

THE FUNERAL.

Shortly after 11 P. M. the coffin was brought into the church on the shoulders of six men. The pall-bearers were twenty in number, including Chief-Justice Chase, Hon. Wm. M. Evarts, Senators Trumbull and Fenton, Thurlow Weed, Erastus Brooks, Rev. Dr. Bright, R. M. Hoe and Robert Bonner. The coffin was followed by Mr. Greeley's two orphaned daughters, and his two nieces, the Misses Cleveland. The staff of the Tribune came next, and then a long array of men, representing all walks in life. The pulpit was occupied by Dr. Chapin, H. W. Beecher, Dr. Edward Beecher, Rev. J. M. Pullman, and Prof. Hitchcock of the Union Theological Seminary.

THE MOURNERS.

Among the vast throng of mourners, there were President Grant, Vice-President Colfax, Senator Wilson, Secretary of War Belknap, Gov. Hoffman and staff, Minister Washburne, the Governors of New Jersey and Connecticut with their staffs, Gen. Babcock, Senator Schurz, the Mayors of many cities, the foremost editors of the United States, all the officials of New York, the delegates from clubs, societies, etc. A more distinguished gathering has never been seen at any funeral. The services commenced at 11:30. Miss Kellogg sung, "I Know That my Redeemer Liveth." Mr. Beecher and Dr. Chapin made eloquent addresses.

THE PROCESSION.

The cortege started from the church at 1:15 P. M., and was two hours and a half reaching the Battery. A line of 125 carriages, two abreast, followed the hearse. The carriage of the President was surrounded by fifty policemen, as a guard of honor. A large number of policemen, firemen, and citizens on foot headed the procession. There was no music, no banners, and no military, the great procession moved in silence through the heart of the great cities. The bells of Trinity and St. Paul's tolled as the carriages passed.

THE VAULT.

Even to the door of the Greeley vault on Locust Hill, in Greenwood, a dense mass of people surged. It was dark when the grave was reached. After a short prayer the body was placed by the side of the remains of Mrs. Greeley and his three children. The two surviving daughters placed wreaths upon the coffin, and the last rites were ended.

THROUGH THE COUNTRY.

All over the United States the day was observed with the tolling of bells, the displaying of memorials, the holding of meetings, the suspension of business, and the passing of resolutions. The Senate of New York, the Legislature of Massachusetts, Congress, and the Electoral College, passed resolutions of sympathy and respect. Thus was laid to rest America's great commoner.

CURRENT TOPICS.

Carl Schurz and the Administration.

THE Administration Senators being a majority have decided in caucus to vacate all places held by Liberal Republicans on Senate Committees and appoint Republicans in their places—thus classing Liberal Republicans and Democrats together. They give by courtesy and custom a minority representation on all committees to the opposition. Thus from the Senate Committee on Foreign Relations, Senator Schurz is removed, leaving as the Democratic representative, Senator Casserley. Senator Casserley has, however, withdrawn and the Democrats have named Senator Schurz. This gentleman has written a letter to the Chairman of the Democratic caucus tendering him his place a letter in which he declares he is still a Republican, devoted to the principles enunciated in the Cincinnati platform and adds, most sensibly: "For the realization of principles laid down, and the measures of policy advocated in that platform, I shall faithfully work, without permitting myself to be diverted by other considerations. If the Administration does anything to promote those ends, I shall then support it. In whatever the Administration may do in the opposite direction, I shall earnestly oppose it. I shall, therefore, not make opposition to the Administration under any and all circumstances, nor support it under any and all circumstances, but in such support, as well as such opposition, be governed by my sense of duty, without considering myself bound by party interests."

London in Darkness.

A STRUGGLE is in progress between the stokers in the London gas-works and their employers, which has resulted in a strike of the former and the consequent submerging of portions of London in darkness. The latest news is that the places of many of the striking men have been filled by the companies and London is again lighted. But peace is not assured. The temper of English strikers is belligerent and aggressive, generally; and the men who have consented to fill the places of the insubordinate may find their respective positions too perilous to retain. Of the merits of this controversy we are not informed sufficiently to judge; but we deprecate all such manifestations, because they are generally injurious to both parties involved, and are always a source of discomfort, if not of apprehension to the public.

Trouble in Louisiana.

AT this writing it looks as if the unscrupulous and desperate politicians of Louisiana (including, of course, that species of animal known as "carpet baggers") were likely to cause bloodshed there in furtherance of their ambitious and venal purposes. The trouble is between the federal office-holders and the State officers—each seeking to obtain and retain control of the State Government and secure the United States' Senatorship to its partisans. The United States Court has decided against Gov. Warmoth and in favor of Senator Kellogg and party. United States' marshals with troops have taken possession of the capitol, and are going to enforce the decree of the Court. Meantime, the excitement is intense, and bloodshed is apprehended.

The Arizona Diamond Fields

HAVE proved a first-class swindle, and some men are well plucked who thought they had their "eye teeth cut." The first gems displayed as having been gathered in the diamond fields were bought in Europe. On these the parties purchasing them realized $50,000, with which they bought more gems in Europe and salted the ground, to which they took Cook, the agent of the company formed to investigate the matter, and picked them up for him. On the strength of this picking up of strewed diamonds the stock of the company was sold to the amount of $320,000. The Santon ruby, represented as worth $250,000, proves, on examination, to be a soft garnet worth about $100. And so officers are looking after the swindlers!

Homes for Disabled Soldiers.

THERE are 4,000 disabled soldiers in the four national homes for such at Dayton, O., Augusta, Me., Milwaukee, Wis., and Hampton, Va. At the home in Dayton there are 1,700. For these soldiers at these homes are provided good clothing, food, shelter, chapels, schools, libraries, reading-rooms, amusement halls, and workshops in which the men are educated to go out and earn their own living as teachers, book-keepers, telegraph operators, mechanics, etc. They are also paid for any useful work they may do while in the asylum.

DOMESTIC NEWS.

New York City and Vicinity.

ST. ANDREW'S Day was celebrated on the 30th ult.....Mr. Froude has closed his arguments with Father Burke....Mr. Stanley's course of lectures has been abandoned as unsuccessful....Rev. Geo. H. Hepworth was installed on the 5th....Henry Rogers was executed in Brooklyn on the 6th for the murder of Police officer Donohue....Mrs. H. B. Stowe has read before a full house....The Tweed trial has been postponed for ten days....The Derby collection of paintings has been sold at good prices... On the 6th chemical paint works in Brooklyn were burned. Loss $28,000....On the 8th N. Y. Evening Express office was burned. Loss $50,000.... The trial of Stokes commenced on the 9th.

Home News.

THE death of Mr. Greeley caused universal sorrow all over the country. Congress passed resolutions of respect. Many cities passed resolutions, and courts adjourned....A $100,000 monument to Meade is to be put up at Gettysburg....Congress will investigate the Credit Mobilier scandal....Cincinnati will have a great musical festival next May... Ex-Gov. Orr has been appointed Minister to Russia....The trial of Judge Curtis continues at Albany....The Boston insurance losses exceed $52,000,000.... The resignation of Thiers is looked for....The Prussian Lower House has passed the Counties Reform bill....The Spanish Congress refuses to impeach Sagasta....The Pope has given his blessing to American Catholics.

SEMI-BUSINESS PARAGRAPHS.

A Big Victory for the New Wilson Under-Feed Sewing Machine.—It will delight all the many friends of the Wilson Sewing Machine to know that in the stubborn contest for superiority in samples of work at the great Northern Ohio Fair, their favorite has carried off the two great premiums, the medal for best six specimens machine work, and the diploma for best specimen braiding. As the great competition was in these two classes, it will be seen that the Wilson's victory is complete. We knew this would be so. It could not be otherwise. There is no talking down the fact that the Wilson is the best family sewing machine now manufactured, the one capable of doing the best work on any kind of goods and under all circumstances. This award of the highest premium to the work of the Wilson Shuttle Sewing Machine, should and will silence the talk of that large class of sewing machine men who have made this machine the object of their special enmity, simply because it is a moderate price machine and undersells their expensive one. Go and see the first premium cards on those beautiful samples of work, and remember that you can buy this premium sewing machine for fifty dollars. —*From the Cleveland Daily Herald.* Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

Watch No. 1143, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marlou, N. J."—manufactured by the United States Watch Co. (Giles, Wales & Co.), has been carried by me eight months; its total variation from mean time being five seconds per month.—JAMES B. RYER, of Kelty & Co., 447 Broadway, New York.

Facts for the Ladies.—Mrs. MARY SANDERS, Jersey City, N. J., has used her Wheeler & Wilson Lock-Stitch Machine since 1863 constantly, on all kinds of sewing, without repairs, and broken but one needle (accidentally); would not sell it for $1,000 if she could not get another. See new Improvements and Woods' Lock-Stitch Ripper.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Dec. 9, 1872.

SINCE our last report the public documents from Washington, incident to the reassembling of Congress, have been published. The President's Message is favorably regarded among business people as a plain and very satisfactory statement of the condition of the country, while its recommendations are free from all experiments on the future of the revenues and currency. The annual report of the Secretary of the Treasury shows that another hundred million of debt was paid off during the late fiscal year, and while the more recent reductions in the tariff and on internal taxes will cut down the surplus applicable to the same object for the current fiscal year, the Secretary anticipates more than sufficient to keep up the regular contributions to the sinking fund. He estimates that only $88,000,000 will be required next year to meet the interest on the public debt; a reduction of $28,500,000 a year since the Administration came into office on the fourth of March, 1869. The reduction on the principal of the debt to Dec. 1, is $365,000,000.

In the week past the general trade of the city was dull. The importations were unusually light, and exports of produce below the previous week. Business, with the exception of the holiday shopping trade, will probably continue dull until the New Year, and money is keeping close, both at banks and on the Street. The stock brokers are paying daily commissions over 7 per cent. to carry over their stocks. In mercantile paper, not accommodated at banks, the rates are 9@12 per cent. per annum.

Gold is ¾ per cent. higher than our last report, and United States stocks are ¼@1¼ per cent. higher on the 5-20's of 1867 and new 5 per cents. Among the Southern State bonds, Tenns. have advanced to 78¼ per cent. The Railroad stocks have moved irregularly, Rock Island showing the only decided rise. Western Telegraph steady; the Express stocks firm; Pacific Mail lower, and fluctuating violently between 79@89 per cent.

The following are the comparative movements of the City Banks for the past fortnight:

	Nov. 30.	Dec. 7.
Capital	$88,019,200	$80,019,200
Loans	276,560,000	278,388,300
Gold and Greenbacks	60,116,700	59,569,400
Deposits	201,915,300	205,019,800
Circulation	27,570,000	27,569,100

PRICES OF GOLD, STOCKS AND BONDS.

PRODUCE AND PROVISIONS.

NEW YORK, Monday Dec. 9, 1872.

Receipts.—The receipts of the principal kinds of produce for the past week are as follows:

Corn, bush	1,450,600	Meal, bbls	2,870
Oats, "	358,400	Flour, "	103,200
Wheat, "	1,101,500	Eggs, "	7,580
Rye, "	90,200	Cotton, bales	30,495
Barley, "	563,400	Hops, "	1,216
Malt, "	104,800	Wool "	3,420
Seed, "	2,380	Butter, pkgs	19,100
Beans, "	4,610	Cheese "	58,480
Meal, bags	2,108	Lard, "	9,539
Peanuts "	3,249	Dried fruits, pkgs	2,630
Pork, bbls	920	Cut Meats "	6,506

Butter.—We have to allude so constantly to the single movement in fine butter that we can almost refer to previous markets without taking up space. The run has been so strong upon fancy goods that the few holders of choice October make are keeping it in reserve and the competition for it has allowed 38@40c. to be frequently quoted for it. General business is not expected to increase much until after the holidays, and all stock under the class noticed is quiet at recent prices. Cool weather starts rather more market and useful medium priced stock into use, but there is no buying ahead. Rolls are scarce, and choice cloth wrapped are higher. Most of them stop at Baltimore and Philadelphia. Sound Welsh butter is salable, as the comparative prices of it and good firkins favor the buyer.

Orange Co. pails, fine, including creamery, 35@38c.; Penn. and N. J. pails, good to fine, 26@35c.; common, 15@18c.; selections, half tubs, 33@35c.; extra half tubs, 38@40c.; half tubs in lots, 25@30c.; good to prime firkins, 27@30c.; do. Welsh, Fall, 25@28c.; Welsh tubs, fair, 20@23c.; other grades of State, 18@22c.; Western Reserve, choice, 21@22c.; Western fair to good, 15@15c.; common, 10@11c.; grease butter, 7½@8½c.; State dairies, tubs on, 28@32c.; do. all firkins, 28@30c. Rolls, choice, 26@28c.; do., fair to good, 20@24c.; do., common, 16c.

Beans and Peas.—The deliveries of beans at this market are increasing, and it is difficult to name prices from day to day. Buyers hold off to some extent, waiting until prices become more settled. Hence prices are most marked in mediums, which are in chief supply. Peas have only a light sale to local buyers.

We quote Mediums, prime $2.70@2.75 per bushel; good do., $2.50@2.60; fair do., $2.00@2.25; prime marrowfats, $2.80@2.85; good do., $2.50@2.60; common and fair do., $2@2.25. Green peas at $1.80@1.90. Southern black-eyed peas, $2.70@2.75. Canada peas in bond, $1.12.

Beeswax.—Shippers are the only buyers in market, and their wants are small. For straight lots, 33½@34½c. are obtained, but one or two small choice lots are being worked off at 35c. for Southern.

Cheese.—The market is without improvement. We greatly miss the holiday trade from the other side, as in former seasons the demand has been brisk for several weeks preceding Christmas, and has always tended to strengthen the market. Stocks here are steadily accumulating, and as shippers' orders are not urgent as a rule, they prefer to hold off and await developments. For the few lots they need, 14@

is about the highest figure they offer, and they have managed to secure some fine lines of stock at this figure. From the home trade 14½c. is obtained for choice lots.

We quote State factory, choice, 14@14¼c.; good to prime, 13½@13¾c.; fair, 12@13c.; State dairy, 12½@13¼ for good to prime; 10@12c. for fair lots; for Ohio factory, 10@11½c. for fair to prime; English dairy, prime, 13½@14c.; fair do., 11½@13c.

Cotton—Shippers have been buying freely, and the market advanced a trifle, closing weak, with liberal offerings. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16¾	17	17¼	17½
Good Ordinary	18¼	18¾	18¾	19
Strict Good do	18 9-16	18 13-16	19 1-16	19 5-16
Low Middling	18¾	19¼	19¾	19¾
Middling	19¾	19¾	20¼	20¾
Good Middling	21¼	21¼	21¾	22

For forward delivery latest sales on the basis of low middling are as follows:—Dec., 18¾c.; Jan., 18 15-16c.; Feb., 19¼c.; March, 19 5-16c.; April, 19 9-16c.; May, 19¾c.; June, 20¼c.

Dried Fruits.—The German demand for apples has been very light, and with more stock on sale of the grades they have been using prices are easier. Prime sliced are sold in a moderate way at inside figures. Peeled peaches are plenty and weak. Unpeeled have a small demand.

Southern apples, 4@5c.; do. sliced, 6@9c.; Western, 5½@6c. Peeled peaches at 14@15c. for Ga., 14@16c. for Va., and 15@18c. for North Carolina. Unpeeled peaches at 4½@5c. for quarters, and 5½@6c. for halves. Cherries, 22@22½c. Plums, 14@19c. Blackberries, 8@9½c. Raspberries, 33@34c.

Eggs.—At the high prices fresh have been difficult to sell, the demand turning on limed. Supplies are more liberal. We quote at 34@35c. for Western fresh, 35@36c. for State and Pennsylvania, 37c. for Jersey. Limed at 25@26c. for Western, and 26@27½c. for State.

Flour.—The demand has been very small, with the ocean freight market against shippers. We are carrying smaller stocks than usual at this period, and as it is known that there are a number of orders here from the other side, which will be closed out as soon as freight room offers, holders are very firm in their views.

Superfine State	$5 90	@	6 30
Common extra do	7 00	@	7 05
Good to choice do	7 10	@	7 15
Fancy do	7 20	@	7 80
Superfine Michigan, Indiana, Ohio, Iowa	5 90	@	6 30

Shipping brands round hoop Ohio	7 00	@	7 25
Trade brands do	7 30	@	9 25
Good to choice white wheat extras	7 90	@	8 65
Fair to very choice extra Minnesota	7 55	@	9 00
Common to fair extra St. Louis	7 10	@	8 30
Good to choice do	8 55	@	11 00
Extra Southern	7 10	@	9 15
Good to choice do	9 20	@	12 00
Rye, common to fine	4 80	@	6 50
Corn meal, Western	3 40	@	3 50
Buckwheat flour	3 70	@	4 35

Fresh Fruits.—About 10,000 bbls. of apples have again found export. The export will probably fall off, as freight room is scarce. There is a good local demand, and prices are firm for sound, smooth lots. Some of the recent arrivals have been touched with frost. River apples are unusually plenty. Grapes are scarcely wanted. Cranberries are slow of sale, though dealers will not be apt to reduce prices much until after the holidays, as they want to see what effect the demand then will have upon the stock. Chestnuts not wanted. Hickory nuts firm. A car load of California grapes will be opened this week.

We quote—Apples, common, $1.25@1.75; do. fair to good, $2@2.50; do. fine, $2.75@3.25; do. lady, $4@8. Pears—Cooking, $ ¶ bbl., $5@6. Grapes.—Catawba, 6@8c.; Isabella, 3@5c. Cranberries, prime, per crate, $3.25@3.50; com. to fair, $2.50@3; bbls., $9@11.50; choice bbls., $11@12. New Virginia peanuts, $1.40@1.75.

Grain.—Wheat has been held higher and this has limited business. Stocks are moderate for the season, and the grades needed by shippers are held with a good deal of confidence. Winter grades are selling moderately well to millers, at full prices; $1.52@1.57 for No. 2 Spring, afloat, $1.62@1.64 for No. 1 Spring do., $1.68@1.70 for Winter red Western, $1.70@1.77½ for amber, and $1.70@2.05 for White. Corn is held higher, sales at 64½@64½c. for Western mixed, per sail, 65½@66c. per steamer do., 65@66c. for yellow Western. Oats sell freely at 52c. for inferior mixed State, 50@52½c. for new mixed Western, 49½@51c. for black, 53½@55c. for stained white Western.

Hay and Straw.—Prices of shipping grades have been advanced a trifle with an increased number of orders on the market. It is not likely prices will show much change until navigation closes.

We quote new shipping hay at $1.10; retail do., $1.40@1.75; salt, do., 70@90c.; clover, 80@90c. Straw at $1.30@1.45 for long rye, $1@$1.20c. for short rye; 80@90c. for oat.

Hops.—Prices are again higher and the market closes with a disposition to put the price up to 50c. for fine hops. The advance is mainly owing to reports from England of excited markets there and light shipments to this side. Growers here release only a few lots. Our market is very poorly supplied.

New York, growth 1872, at 38@48c.; Eastern do., 23@45c.; Western do., 33@45c.; Yearlings '71 23@30c.; Olds '70 10@15c.; Old Olds, '68-69 8@10c.; Bavarians, 43@48c.; English, 36@43c; Belgian, nominal, 33@38c.

Poultry and Game.—The market has not recovered from its late demoralization. No daily supply since our last has been sold out clean, and, with receipts lapping one another, there is a great pressure to sell and not be caught with a damp, muggy day that may occur at any time in December. It is estimated that the receipts are not more than one-half as large as last year, and it is very certain that retailers are not taking more than one-half the quantity they did last year. Geese are improving in demand; heavy ones are wanted for Christmas. There is a liberal supply of game and prices are easier; still a reduced range sends it largely into use and sellers are satisfied to sleude quotations.

We quote prime N. J. and Bucks Co. turkeys, 14@16c., a few large and dry-picked at 13c.; State and Western, poor to best, 12@16c. Chickens, Western, 7@12c.; State and near points, 14@15c. Geese, 2@14c. Ducks, 12@16c. A great many lots of stale Western chickens and geese have sold at 5@6c.

Game quotations:—Venison, whole, 12@13c.; do., saddle, 19@21c. Canvas-back ducks, $1.75@2.50; red heads, $1@1.25; mallard, 75@87c.; teal, 40@60c.; rabbits, 35@40c.; hares, 50@70c.; quail, $2. Prairie chickens, 95c.@$1; partridges, State, 75c.@1; eastern, 62@75c.; wild turkeys, 22c.

Provisions.—Mess pork has ruled quiet throughout the week. Old is pressed for sale and is lower, quoted in round lots at $13. New for December, $13.50. There has been no jobbing trade of moment. Beef is quiet; there have been a few sales for export, but freight room is scarce. Beef hams steady at $23. Cutmeats are a little stronger, with the prospect of higher hogs, but no large business is noted. Smoked hams, 13@13c., shoulder, 6¼@6¾c. Pickled hams, 10@11½c., shoulder, 5@5½c. Lard has sold largely at 8c. for choice old, 7⅞c. for new, cash and delivery, and 8c. for Jan. City closes at 7⅞c. Bacon is not active. City long clear, 7c., and prompt delivery. Winter western meats 7½c. for short clear; long and short together, 7¼c.; long clear, 7c. Stearine has sold to arrive at 8½c. Tallow is dull, as few exporters can operate, owing to scant freight room; country, 8½@8¾c.; city, 8¾.

Seeds.—New clover is bought up promptly on arrival by shippers at 9¾c. Timothy is hard to sell at $3@3.25. Rough flax is higher, selling at $1.95@2.15.

Sundries.—Honey at 29@30c. for dark and 32@35c. for white, in glass boxes; mixed lots, 21c. Cider at 6@10c. per gallon. Feathers, live geese, new, fine, per lb., 60@70c.; do. mixed, 40@60c.; hen, 7@9c.; vinegar, cider, ¶ gal., 20@25c.; do. manufactured, 15@20c.; newspapers, ¶ ℔. 4@4½c.; white rags, 5@5½c.

Tobacco.—The home trade are about the only buyers at the market, with a steady range of prices ruling.

Wool quiet and nominal, 55c. for medium and 58@65c. for coarse. Sheep pelts, $1.35@2 each. Beef hides, 7@8c. ℔ lb. Hay, $18@21 per ton. Straw, $11@15 per ton.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Dec. 7, 1872.

THE market at Little Falls for the week ending Dec. 7 was active, with sales of about 600 boxes farm dairies at 11@13c., according to quality, and a few lots going at 13½c.

There was a good quantity of factories offered and sales were made at 13½@13¾c., a decline from last week's prices. We give leading transactions as follows:

Bethel	13½	Manheim Turnpike	13¾
Cayadutta	13⅜	Middleville	13½
Cold Creek	13⅜	Newport	13⅜
Dairy Hill	13½	Nichols	13¾
Empire	13⅜	Norway Ass'n	13½
Henderson Associat'n	13½	Shell's Bush	13½
Herkimer Co. Cent'l	13½	Smith & Co	13¾
Johnston	13¾	St. Johnsville	13½
Hasondever	13½	Turner & Welch	13¾
J. D. Ives	13¾	Little Falls Central	13½
Manheim	13¾		

About 150 tubs of butter were on delivery, and were sold at prices ranging from 30@33c., according to quality.

The weather during the early part of the week was cold, with snow sufficient for sledding.

LIVE STOCK MARKETS.

NEW YORK, Dec. 7, 1872.

THE past has been a dull week in the live stock line. Poultry completely glutted the market, and was sold by the ton at 4@6c ℔ lb. for State lots. This being cheaper than beef, the common people took to it, and the discussed story started a few weeks ago, probably with a view of helping the meat trade eventually injured it. Stock has not been in heavy supply, but the lessened demand has kept a surplus on hand during the entire week. The weather was warm and unfavorable during a portion of the time, but is cooler now, so that at the close a better tone is manifested, especially for cattle. This is emphatically the season of the year for poor stock, farmers sending in all or rejected lots from which the good animals had been previously taken, and they do not want to put such trash upon Winter feed.

RECEIPTS OF LIVE STOCK

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,329	137	1,621	30,576	63,533
" last week	8,396	82	1,412	28,028	42,879
Average last year	7,187	88	2,301	25,132	25,177

Beeves.—With about the same supply as the previous week, there is very little change in the market. The quality has averaged very poor, and has caused a fresh inquiry for fat cattle. The few good droves sent here have sold quickly at 13@14c. Even well-fed Texans were in demand, for they were better than some of the natives. Good Texans sold at 9¾@10¾c., while a few Cherokees of 7 cwt. reached 11@11¾c. In contrast with these were some thin, little Virginia steers at 8@10c. The supply of Texans was quite large, but this kind of stock is getting to be less plenty in the country and we look for an improved quality after the holidays. So far as we can learn, there is a good supply of Christmas beeves ready to come forward, and then our city butchers can revel in fat cattle of mammoth proportions. Some of the noted feeders promise to give us animals superior to anything heretofore seen in this market of wonders in this line. It is now very evident that the supply of Texan cattle is being diminished in their native home. The run during the past year was using 100,000 less than it was in 1871. At this rate of decrease it is plain that the far Western States of Kansas, Colorado, Nebraska, etc., must be looked to for the deficiency, as it is pretty evident that instead of increasing the supply in more Eastern States, they will more and more go into grain, fruit and dairying, leaving the plains for cattle. And in this connection we cannot cease to urge the improved breeds in place of these ungainly "Long-Horns." Suppose it does cost more to get started with them, and a little extra both for their keep and freight East on account of larger size, just compare a 6 cwt. Texan at 9c., $54, with a Short-Horn of 9 cwt. at 12c., $108—just twice as much as the wild animal.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Choice beeves, ¶ ℔	13¼ @ 14¼	13¼ @ 14
Good to prime	12¾ @ 13¼	13⅜ @ 13¼
Medium	11¾ @ 12	11¾ @ 12
Poorest grade	7 @ 10	7 @ 10
Average sales	11¾ @	12 @ —

Hogs.—Another car Western dressed has arrived, and sold for 5¾c., being pigs of 180 lbs. City dressed have varied a little in price, but close at 5¾@5¾c. for heavy to medium weights, and 6@6½c. for light hogs to smooth market pigs of 121 lbs. and under. Live reached $5.05 one day for prime, but a fair quotation is 4¾@4¾c., with extras at 5c.

Milch Cows.—The late and very marked advance in milk has started producers after fresh cows, so that the increased supply is still inadequate to the demand, and prices are about $5 higher, with a lively trade. We quote at $45@85 as extremes.

Sheep and Lambs.—So few lambs are now sold apart from sheep that they may almost be dropped. When kept by themselves they go at 5¾@7c., with prime at 7¼@7½c., one lot of very extra Canadas, 90¾ lbs. selling at 7¾c., and 2 cars, 72 lbs., at 7c. Sheep are dragging heavily, the dead meat market being completely glutted with mutton at 5@6c. per lb. Cheap poultry has sadly injured the sale of mutton. Live sheep remain in the pens day after day, falling off in flesh and losing the owner's money. When sold they go at low prices, except when fat. The bulk of the sheep now coming forward show poor quality, selling at 4¾@5¾c. Very thin lots go at 4@4¼c., and prime at 6¾@6¾c. Two cars, 74 lb. sheep, sold at 4¾c. The average of 481 thinnish sheep was $3.77 each; 7,171 better ones selling at $4.13.

Veal Calves.—Some have run down very much, most butchers preferring them ready dressed. The best Bucks Co. barely being 9c. alive, most of them selling at 8¾c., with good State at 8c., and fed calves 3@5c. Dressed range from 4c. for the ordinary grass, up to 13c. for the best milk veals.

LATEST—Dec. 9., 4 P. M.—Beeves.—Arrivals to-day: 161 cars at Communipaw, 149 cars at One Hundredth street, and 39 cars at Weehawken, making 6,118 head on sale. The few good cattle sold well. Some premium steers of 10@12 wt. net went at 15@15c. with prime 7½ wt. at 13¾@14c. Common cattle were largely represented and dragged at 10½@11¾c., while scallawags were scarcely over so plenty or hard to sell, running down to 6@8c., and large numbers left over.

Sheep.—Arrivals, 12 cars at Communipaw, 11 at Forty-eighth street, and 17 at Fortieth street, making 7,583 head on sale. Trade extremely dull for all save prime sheep, which sold at 6¾@6¾c.; very many go over for to-morrow.

Hogs.—Arrivals, 78 cars at Communipaw and 80 cars at Fortieth street, making 16,516 on sale. There is a fair demand for live. One car 153 lb. Ohio pigs selling at $4.90, but most sales were at 4¾c. Dressed were unchanged.

SPECIAL NOTICES.

A Positive Radical Cure for Rupture.—The Elastic Truss Company, at No. 683 Broadway, New York, will send their Descriptive Circulars to any person afflicted with Hernia. This Truss can be sent by mail to any part of the country.

THE YOUTH'S COMPANION
A WEEKLY PAPER FOR
YOUNG PEOPLE AND THE FAMILY

THE COMPANION aims to be a favorite in every family—looked for eagerly by the young folks, and read with interest by the older. Its purpose is to interest while it amuses; to be judicious, practical, sensible; and to have really permanent worth, while it attracts for the hour.

It is handsomely illustrated, and has for contributors some of the most attractive writers in the country. Among these are:

Prof. James De Mille,	**Louise C. Moulton,**
Louisa M. Alcott,	**"Sophie May,"**
Grace Greenwood,	**C. A. Stephens,**
Rebecca H. Davis,	**Ruth Chesterfield,**
C. W. Flanders,	**M. A. Denison,**
S. S. Robbins,	**Prof. H. Lincoln.**

Its reading is adapted to the old and young, is very varied in its character, sprightly and entertaining. It gives

Stories of Adventure,	**Stories of Home and**
Letters of Travel,	**School Life,**
Editorials upon Cur-	**Tales, Poetry,**
rent Topics,	**Selections for Decla-**
Historical Articles,	**mation,**
Biograph'l Sketches,	**Anecdotes, Puzzles,**
Religious Articles,	**Facts and Incidents.**

GOD'S SIX DAYS' WORK

Or, SCIENCE AND THE BIBLE.

This book gives the very cream of Science, making its thrilling realities, beauties, wonders and sparkling gems a hundred-fold more interesting than fiction. Every man, woman and child wants to read it. It is endorsed by the Press, and Ministers of all denominations.

GEO. W. EATON, D. D., LL. D., *President of Hamilton Theological Seminary*, says:—"The author has worthily conceived of the stupendous, amazing and overpowering splendor of the Divine Hand in Creation, and set forth his conceptions, in language of uncommon force, clearness and beauty. Its religious spirit is reverent, loyal, devout and fervent. It is worthy of all praise." Sales immense. Agents report 52–15–46–80–87 and 25 copies per week. Great inducements to Agents.

Employment for Young Men, Ladies, Teachers and Clergymen in every county. Send for Circular. Also, Agents wanted for the

Peoples Standard Edition of the Holy Bible,

Which, in addition to the sacred text, and all the important features of other editions, contains a "History of the Books of the Bible," an "Inter-Biblical History," a "History of all Religious Denominations," over sixty "Historical and Chronological Tables," arranged on a new basis, numerous full-page engravings, a handsome chromo Marriage Certificate, a Family Record, and **A Gallery of 536 Illustrations** and descriptions, embracing "An Illustrated Life of Christ." "An Illustrated Life of Paul," "An Illustrated History of Palestine," Illustrated Sketches of Jerusalem, Patmos and the Seven Churches, Egypt, The Exodus, and Assyria; also, Illustrated Sketches of the Houses, Costumes, Arts and Sciences, Religious Rites and Emblems, Trees and Plants, Animals, Writings and Coins in Bible times. All our own Agents for other books, and many Agents for other Publishers, are selling this Bible with wonderful success, because it is the most valuable, beautiful, and popular edition now in the market, and is sold at a very low price. Fine bindings (of both books), for HOLIDAY PRESENTS. Canvassing books free to working Agents. Address ZIEGLER & M'CURDY, Phila, Pa., or Cincinnati, O.

Agencies for the Great Work, LIVINGSTONE LOST AND FOUND,

will be given out. The whole story told in a volume of nearly 800 pages and over 50 full-page engravings and maps, illustrating the routes and journeys of Stanley and other explorers in Africa. **Price only $3.50.** Prospectus now ready. $25 a day can be made on this book. Send for agencies to

MUTUAL PUB. CO., Hartford, Conn.,
or W. E. BLISS, Toledo, Ohio.

AGENTS WANTED FOR THE

LIGHT IN THE EAST

The most comprehensive and valuable religious work ever published; also, for our new Illustrated Family Bible, containing nearly 500 Fine Scripture Illustrations, and Dr. Smith's complete Dictionary of the Bible. Watch Buyers Attention

The undersigned respectfully call the attention of persons contemplating the purchase of Watches to the superiority of the celebrated Sickle Movements, manufactured by Messrs. BOREL & COURVOISIER of Neufchatel. Gents' and Ladies' sizes, key and stem winders, quarter-plate. These watches have Equilibrium escapements, chronometer balances, exposed ruby pallets, Berguet hair-springs and full ruby-jeweled, and combine all modern improvements in watch-making.
These Watches were awarded the Grand Prize at the Paris Exposition of 1867, and can be warranted to perform equal to those of the best manufacturers.

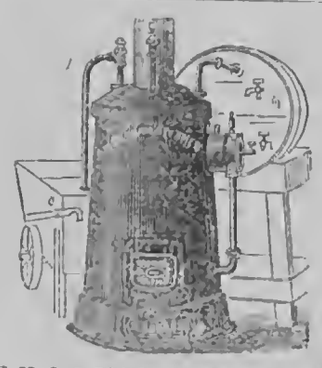
Agents wanted every where by the BICKFORD KNITTING MACHINE COMPANY. DANA BICKFORD, President and General Business Supt., 689 Broadway, New York.



ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats, Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler—No. 3, a medium size, having 3,833 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.
It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing
Anderson's Low Pressure Steam Heater,
for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.
For further particulars, address

TO INVESTORS.

We are selling at par and interest, and recommend to careful investors, the First Mortgage Seven-Thirty Gold Bonds of the Northern Pacific Railroad Company. Special attention is called to the ample Land security on which these bonds rest, in addition to the usual guarantee of a first mortgage on the Road, its equipments and earnings. The lands of the Company thus far sold have realized $5.97 per acre. The grant averages about 23,000 acres per mile of road.

JAY COOKE & CO.

PRATT'S ASTRAL OIL

Has for the past four years been acknowledged as the safest and best illuminating oil for family use ever made. It is rapidly displacing all illuminating material in every part of the world where lamps are in use. Its safety and unequaled burning qualities have been tested by consumers in nearly every city and village in the United States.

OIL HOUSE OF CHARLES PRATT,
108 Fulton St., New York.

THE LITTLE CORPORAL.

AN ILLUSTRATED MAGAZINE FOR BOYS AND GIRLS.

THE LITTLE CORPORAL is now in its eighth year of publication, and has from its beginning been distinguished for the purity and originality of its literary contents, and the beauty and excellence of its pictorial illustrations. The serial stories for next year will be a continuation of "UNCLE DICK'S LEGACY," by Emily Huntington Miller; "HIDDEN TREASURES," by Mary A. Dennison, and a new story by Helen C. Weeks; besides a variety of Shorter Stories, Poetry, articles on Scientific Topics, Natural History, letters of Travel, Home Amusements, etc. All new subscribers for next year will receive the remaining numbers of this year FREE. Two beautiful chromos—"Mother's Morning Glory," and "Little Runaway," given to every subscriber. Chromos sent promptly.

Terms $1.50 a year, including the chromos, unmounted, sent post-paid for 10 cts. extra; Mounted, sized and varnished, ready for framing, 25 cts. extra; in clubs of five or more, 15 cts. extra. Specimen numbers with Premium List, FREE.

JOHN E. MILLER, Publisher, Chicago.

Music Books for the Holidays!

LIFE OF HANDEL [$2]; of *Chopin* [$1.50]; of *Beethoven* [$2]; of *Mendelssohn* [$1.75]; of *Rossini* [$1.75; of *Mozart* [$1.75]; of *Schumann* [$1.75]; of *Gottschalk* [$1.50]; of *Weber* [$1.75]. These books are elegantly bound and are charming biographies.

LETTERS of *Mendelssohn* [$1.75]; of *Mozart* [$1.75]; of *Beethoven* [$2]; *Polko's Reminiscences of Mendelssohn* [$1.75].

These records of the inner life of the great masters are intensely interesting. Finely bound, like the preceding.

Moore's Encyclopedia of Music [$6] contains "all that is worth knowing" about music and musical people.

GEMS OF STRAUSS, 250 large pages, full of the best Strauss Music. Boards, $2.50; Cloth, $3.

THE MUSICAL TREASURE. 225 pages of the most popular Vocal and Instrumental Music. $2.50 in Boards; $3 in Cloth; $4 Finely Gilt binding.

GEMS OF GERMAN SONG. 212 pages. The very best German Songs, with German and English Words. $2.50 in Boards; $3 in Cloth; $4 Finely Gilt binding.

"The best magazine for children in the world."—S. S. Times.

THE CHILDREN'S HOUR

An illustrated magazine, edited by T. S. ARTHUR. This favorite of the children "from five to fifteen" will, for 1873, be as pure and as full of attractive reading and beautiful pictures as ever. Price, $1.25 a year; 5 copies, $5. Sample numbers, 10 cents.

T. S. ARTHUR & SON, Philadelphia.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully Illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

THE PEOPLE'S PRACTICAL POULTRY BOOK: A Work on the Breeding, Rearing, Care and General Management of Poultry.

By WM. M. LEWIS.

THIS is one of the finest gotten-up works on the subject on which it treats, for its size and price, of any publication of the kind in this country. It is finely and profusely illustrated, and printed and bound in extra style. Contains 224 large octavo pages. Sent, by mail, post-paid, for $1.50. Address

Sheep Husbandry.

LONG-WOOLED LINCOLN SHEEP.

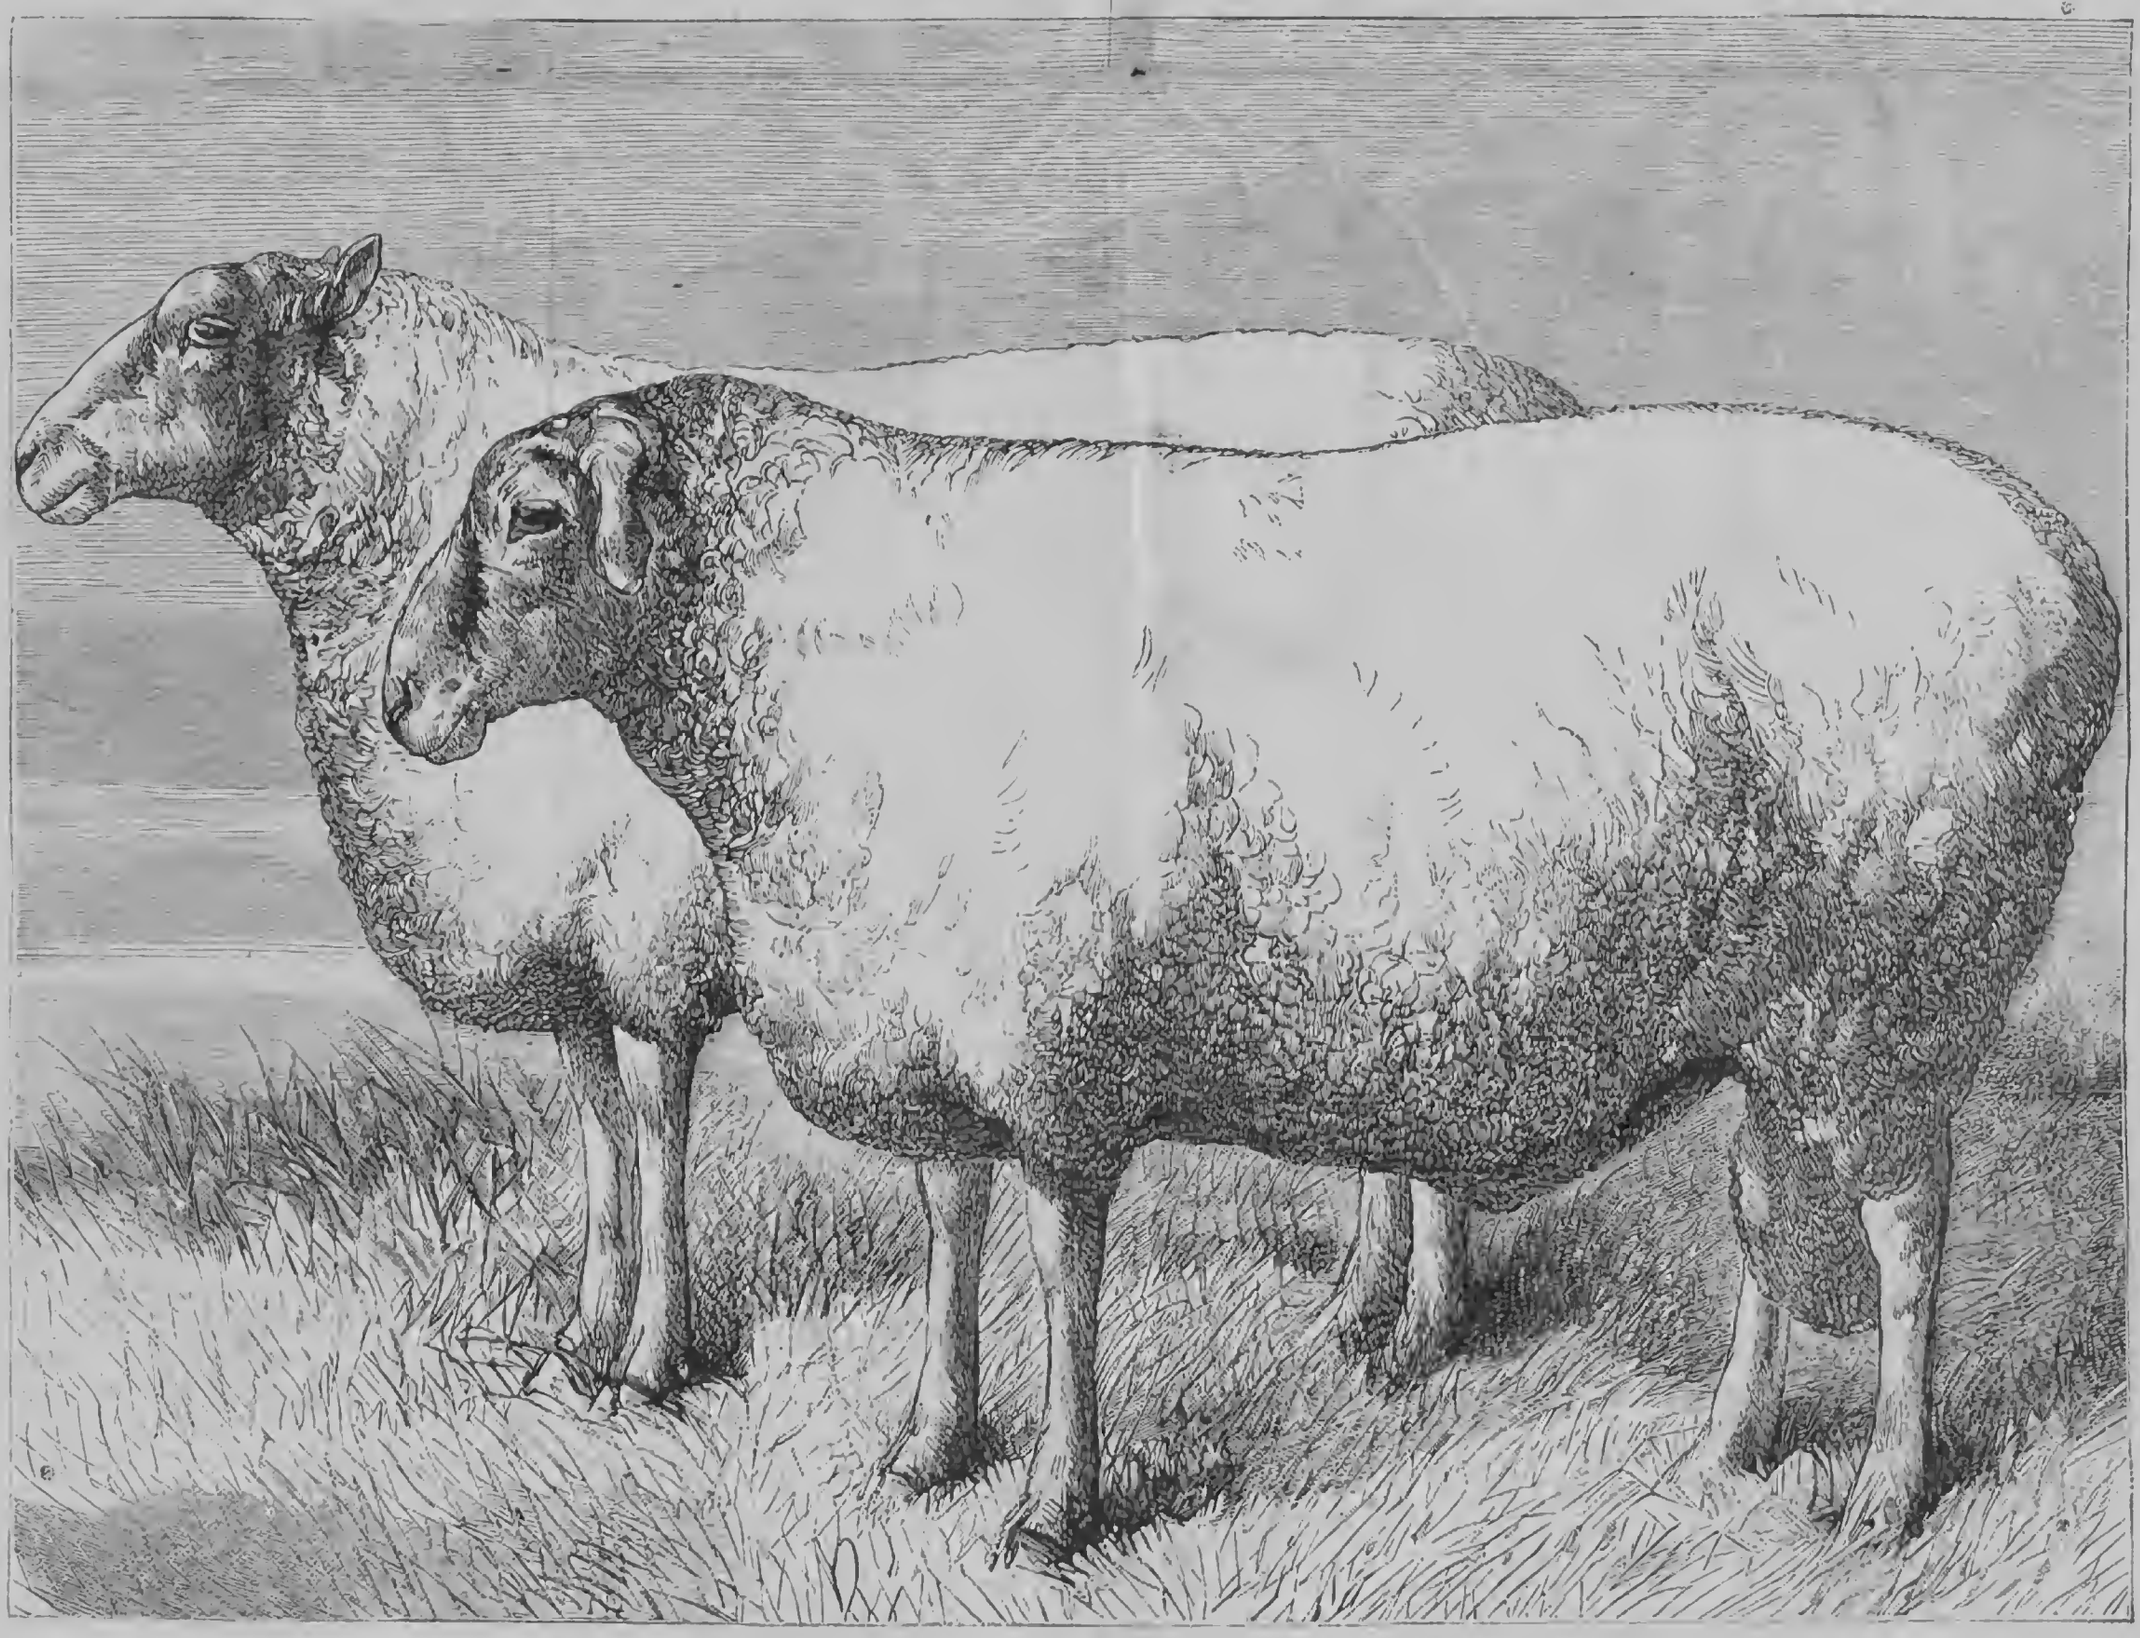
OUR illustration of these sheep is copied from the London Field, from whose article on this breed, accompanying the illustration, we segregate what follows. We do this because we know there are some of these sheep in this country highly esteemed, and because those who do not know what is claimed for the breed in England know little about it. The writer in the Field says the Improved Lincoln sheep, "taking alone into consideration the weight of the fleece, is unrivaled as a wool producer; and we shall endeavor to show that, for wool and mutton combined, it has no equal as a rent-paying animal. It must be understood that we write from a Lincoln breeder's point of view, but our aim will be to confine ourselves strictly to facts, and thus leave our readers to form their own conclusions.

"Upwards of a century ago Lincolnshire possessed an established breed of sheep, with long, bony legs and large carcasses, and, according to ELLIS, they carried more wool than any sheep whatsoever. MILBURN speaks of them as having large and coarse carcasses, the length from head to tail being in some cases four feet six to seven inches. The ribs were flattish and not covered very thickly with flesh; the belly deep and the shoulders so forward as almost to hide the breast; the neck thick and large, with a deep and flabby dewlap hanging from it; the skin thick, and the flesh often grained; the hind quarters full and fat, the tendency being to lay on fat at the rumps, and the legs fleshy and deep. The whole animal, continues MILBURN, appears to be somewhat unshapely, taking the standard of a *connoisseur* as a criterion, but the valuable wool which covers it hides all imperfections.

"There can be no question that the original Lincolnshire sheep were ungainly animals and gross feeders, possessing but little aptitude to fatten. When it was seen, however, what a vast improvement had been made in the Leicester sheep by BAKEWELL, the intelligent Lincolnshire breeders determined to follow in his footsteps; and, by a wise and judicious admixture of Leicester blood, they created an entirely new type of sheep, which retained the pre-eminent wool-bearing qualities of the old breed, and showed a marked improvement in form and in their aptitude to accumulate flesh. Foremost among these early improvers were the KIRKHAMS, CHAPLINS, CASWELLS, DUDDINGS, and CLARKES, whose flocks continue to hold the highest rank up to the present day. The uneducated agriculturists of the past generation, however, for many years refused to take advantage of the skill displayed by the pioneers in this great work of improvement; but finally they began to perceive the vast superiority of the new type, which soon became the one established breed of the country.

"Of course the great change which we now notice in the character of the sheep was not effected until after many disappointments, and until years of skill and patience had been devoted to the work. Fresh names were continually being added to the list of breeders, names which have since become famous—the MARSHALLS, GREETHAMS, DAVYS, WRIGHTS, HOWARDS, CARTWRIGHTS, PEARS, PADDISONS, BATTERSBYS, KEMPS, HAVERCROFTS, VESSEYS, ROBINSONS and MAYFIELDS; and the result of the competition has been the production of a sheep unequaled for wool and mutton combined.

"It was not until a quarter of a century ago that the value of the improved Lincolns began to be acknowledged outside the county. The grand appearance of the sheep exhibited at the Royal and other shows impressed visitors from the colonies, who saw the benefit likely to be derived



LONG-WOOLED LINCOLN SHEEP.

from a cross between them and their own short-wooled breeds. This was more particularly the case about 1864 and 1865, when wool became so valuable in the market. Enormous prices were made at the annual ram sales and lettings, one celebrated sheep belonging to Mr. KIRKHAM of Biscuthorpe, being let, in five successive years, at an aggregate of 600 guineas. Naturally, however, the flocks of Mr. MARSHALL, the Messrs. DUDDING, and other noted prize takers, were best known to foreign customers, and the late Mr. T. B. MARSHALL opened a connection with Australia, New Zealand, the Cape of Good Hope, South America, and, indeed, all parts of the world, which was continued after his death by his brother, Mr. W. F. MARSHALL, the present owner of the Branston flock. The improved Lincolns are now spread over the whole of Lincolnshire and Rutland, and parts of Cambs, Notts, Yorkshire, and Norfolk, and in certain districts of Scotland and Ireland. Indeed, wherever longwools are grown, crosses are usually obtained from Lincolnshire.

"As breeders the improved Lincolns are wonderfully prolific, and they arrive at maturity very early. The mode of management is exceedingly simple. The sheep as a rule being hardy and healthy, the lambing season commences the last week in February, and closes about the end of March. About one-third of the ewes produce pairs, triplets are frequent, and fours not uncommon. A week after birth it is the common practice to turn the lambs with their dams on the young seeds, there being very little grass on the heath. There they remain until they are weaned (about the second or third week in July), when they are placed on clover eddishes, cake and corn being allowed. Good grazing lambs, age about six months, are selling at the present time at from 50s. to 56s. each, which shows that the value of the breed has not been overrated.

"A grander show of sheep than those annually penned at Lincoln April fair it is impossible to conceive. The number of hogs* ranges from 40,000 to 50,000, and the best pens this year made from 85s. to 100s. each. These prices were obtained for hogs only fourteen months old. As these sheep are bred for both wool and mutton, it is necessary that they should not only have long and lustrous fleeces, but that they should possess those qualities which indicate an abundance of meat—good necks, broad and even backs, with a firm touch—that they should be well sprung in the shoulders, and have good legs.

"With regard to the fleeces, we may mention one flock of improved Lincolns, which may be taken as a fair sample of the best flocks in the county. Mr. MARSHALL of Branston has clipped no less than 26½ lbs. of wool from a shearling, 14 months old, and his hogs have this year todded† 160 twos and 40 threes. But even this average is exceeded by Mr. J. J. CLARKE of Welton-le-Wold, whose sheep have, it is said, the heaviest fleece in the county.

"In order to show the relative value of Lincolns, as compared with other breeds, we will conclude our notice with a brief report of some practical experiments carried out by the Darlington Tenants' Club in 1861-2, as published in the "Year Book of Agricultural Facts for 1861:—'On the 4th of October, 1861, six sheep of each of the undermentioned breeds were turned upon rape, so that nature might have its course with natural food, and without stint, until the 11th of November, during which time the cross from the Teeswater gained 2st. 2lb., the Border Leicesters 5st. 11lb., the Lincolns 3st. 6lb., the Shropshire Downs 6lb., the Leicesters 1st. 13lb., and the Cotswolds 5st. 8lb.; while the Southdowns lost 11lb. On the 11th of November the sheep were again folded, the several crosses being then in a pretty equal state for taking on condition. If a land could be supplied, it might be in favor of the Cotswolds, from the start this class had made in the latter part of the Summer grazing, and the shoot out at the rape. The whole of the sheep had as many Swede turnips as they could consume, and half a pound of linseed cake per day, with the exception of the Lincolns, and these, for forty-two days, had a quarter of a pound extra; but this extra cake was placed to their debit in like manner as the various weights of turnips consumed were to that of the several classes. For the comprehensive tables giving the result of the experiments we must refer our readers to the Year Book in question, but we may mention that the relative value that one class of sheep bore to the other (after deducting the value of the food from the value of the mutton and wool) when the sheep were slaughtered in Feb., 1862, was shown to be:—The Teeswater cross, 11s. 7½d.; the North sheep, 12s. 5¼d.; the Lincolns, £1 10s. 5d.; the Southdowns, 17s. 3d.; the Shropshire Downs, £1 5s. 10¾d.; the Leicesters, £1 2s. 6d.; and the Cotswolds, 14s. 9½d. The whole of the sheep were sold on the same day in the Leeds market. It will from the above be seen that the Lincoln sheep showed a marked superiority over the other breeds.

*Young sheep never sheared.
†Weighed.

NOTES AND QUERIES.

A New Breed of Sheep.—*La Bein Public*, a French journal, says:—"It is well-known what great benefit France received from the introduction of Merino sheep. An experiment of acclimation of a similar nature is soon to be made at the park of La Tete d'Or, at Lyons, from which are expected results equally as advantageous. There are expected at the menagerie of this place several specimens of a breed of sheep hitherto unknown in Europe. They give almost as much milk as goats, and produce in addition as much wool as the Merinos, and they furnish as good meat as any now in use. This rare breed of sheep is to be found only in some of the Cantons of Algeria. An attempt is going to be made to acclimate them in France. The editor of the *Colon Algerian* was the first to mention this project, and will send the first lot for trial."

Field Crops.

THE POTATO IN NORTHERN NEW YORK.

[Extracts from remarks before the Jefferson County, New York, Farmers' Club, by W. R. SKEELS.]

I HAVE but very little to say upon the cultivation of the potato. My experience cannot differ materially from that of most persons present. I should consider it useless to tell a man whose land was composed of clay that only a light loam would do, or one who had a sandy farm that he must have heavier soil. Yet, the nearer we can meet the mean of these two points the better results may we expect; whether the effect is produced by underdraining on the one hand or the introduction of vegetable mold on the other, depends upon the condition of the soil. * * * *

Each year adds to my conviction that we waste a large per cent. of our seed. If you select good, fair-sized tubers, cut them to single eyes; every eye will grow and produce a good healthy plant. If planted whole, but three or four will ever grow. It will take three times the seed to produce a like result. * * * My experience has been more varied in varieties than in cultivation. I shall consider the merits and demerits of those varieties that have been introduced during the last five years.

Early Rose.—In January, 1863, B. K. BLISS & SON called the attention of the public to a new seedling called the Early Rose, a seedling of the Garnet Chili. They claimed for it wonderful points as regards earliness, productiveness and good table qualities. No potato ever introduced was so generally sought. Cultivated under such a variety of condition it is a wonder that it meets with such almost universal success; and, taking all things into consideration, it may be safely pronounced "the potato for the million." Others excel it in special points; none in all.

Bresee's Prolific.—In January, 1869, Messrs. BLISS & SON introduced BRESEE'S Prolific, also a seedling of the Garnet Chili. It is a superior-looking potato, smooth, slightly russett, a little lighter colored than the Early Rose, from three to four weeks later ripening. With me it has proved the most successful variety for field cultivation of any I have tried; it succeeds upon a much poorer soil than the Early Rose.

Excelsior.—In 1869, J. J. H. GREGORY introduced the Excelsior, a seedling of the State of Maine potato. It is a white-skinned potato, of medium size; for three years it has proved quite productive, of excellent table quality, and not as healthy as the Prolific.

King of Earlies—Is the finest looking potato I have seen; is healthy and quite productive. In 1870-71 it was a poor table quality; this season it has been good, fully equal to the Early Rose. I never could satisfy myself that it was any earlier than that variety.

Peerless.—The most productive of BRESEE'S Seedlings. I have never succeeded in growing a crop of even fair table quality, though I have heard of crops being excellent. Upon our farm it only excels the Harison in productiveness.

The present season has marked the introduction of two classes of Late Roses—one a sport, the other a seedling.

Thorburn's Late Rose—A sport of the Early Rose—I planted by the side of the Early Rose. It was five days later coming up, fifteen later to bloom; tops remaining green from three to four weeks longer. In point of yield there was no perceptible difference; five pounds seed produced 173 pounds. I noticed quite a number of hills, the tops of which ripened quite early. There was no mixture of seed, as I cut each potato to single eyes, and dropped all of one before cutting another. Where this tendency to ripen earlier is noticed, the hills should be dug and carefully removed before the main crop is dug, if intended for seed.

Campbell's Late Rose.—A seedling raised by G. W. CAMPBELL of Ohio. In general appearance it resembles the parent potato, though not as uniform in shape or size. It is decidedly a late potato, the tops remaining green until killed by frost late in October. It is a very strong growing vine, showing the least effect from drouth of over fifty varieties growing in the same plat. Last season I was inclined to cry "humbug" when I read the claim that it would yield from two to three times as much as any potato grown. I tested it in a small way with the Peerless, selecting one pound of each as nearly uniform as I could; divided each pound into forty-five pieces, planted in parallel rows. The Peerless showed signs of ripening September 15, and was dug; yield, forty-nine pounds. CAMPBELL'S Late Rose was green when dug, October 1; yield, seventy-one pounds. No attempt was made to force latter kind; no manure used, as I desired to ascertain what might be expected in ordinary field cultivation. Ten pounds of CAMPBELL'S Late Rose produced 317 pounds. * * * *

What causes the roughness of the skins of potatoes, giving them the appearance of having been eaten over by some small animal or insect? We have always been led to think it was the angle worm. I am satisfied that it is not; that it is a disease caused by some chemical action of soil; that though the angle and wire worm may take advantage of the softness caused by the removal of the skin to feed upon the the tubers, they are in no way accountable for the condition of the potato.

While the potato rot is destroying the crop in Europe, the Colorado Bug is busy with us. Slowly but surely has it been working its way East from the Rocky Mountains; already it has reached the borders of this State, and its introduction here may be considered as but a question of time. Then, eternal vigilance and Paris green will be the price of potatoes.

FIELD NOTES AND QUERIES.

Chester County Mammoth Corn.—Sometime since I noticed a correspondent's inquiry in the RURAL NEW-YORKER in regard to the *Mammoth Chester County corn*. Having raised it for two seasons past I think I can give some facts about it. It is a valuable addition in our corn growing section. The color of the grain is quite a good recommendation, it being a beautiful golden yellow; kernels of good shape and depth; cob of moderate size. It is devoid of that hard flintiness which characterizes some of the new varieties of corn. This one characteristic is such that it will commend itself to all stock feeders. Its producing qualities the originators have dwelt upon, trying to impress the public that it will produce near twice as much as the common varieties. I have not raised any heavier crop of the Mammoth corn than I have some of the best yielding varieties of our common corn with the same care and cultivation; yet I do not condemn upon these facts, for it certainly is better corn than one-half of the varieties now grown. This I have found out by several years' experience with corn.—J. W. M., *Oregon, Mo.*

Lucerne in France.—Lucerne is in this country regarded a "Providential forage" plant, and exhibits a marvelous development when irrigated—a process that France has much neglected. It is acknowledged that artificial grasses can be more profitably replaced by lucerne. In Saxony this latter plant works wonders on light soils, when plowed in green as a preparation for a grain crop. French farmers adopt the same plan; they sow about twelve pounds of lucerne per acre with the barley in February, plowing down the lucerne after the harvest, as preparation for Winter wheat.

Farm Implements.

PRACTICAL DITCHING MACHINE.

I HAVE repeatedly seen in the RURAL NEW-YORKER inquiries respecting an effective and practical ditching machine; especially in your paper of Nov. 25, 1872, in a communication from E. F. RUSSELL, Portland, Oregon. In reply to the several inquiries made through your paper I would say that I have had the privilege of examining, and seeing partially in operation, a machine of that kind in process of being made by Mr. ABRAHAM SPENCER, which, I think, will be both effective and practical. He calls it the "Locomotive Ditcher," for which he has been granted a patent. It somewhat resembles a truck as used on the railroad. It rests on four wheels similar to mowing machine wheels, with cross-bars on the outside to prevent slipping on the ground backward. The axles are connected by a strong frame of plank on which the working machinery is built.

The machine proper consists of an upright shaft of wood or iron, on the upper end of which is placed a sweep for two horses. Near the lower end are placed two bevel wheels—one connected by another wheel to a shaft running horizontally across the frame, in which are inserted four strong curved arms, with steel plates or diggers attached to the ends, in the form of strong, narrow shovels (old mill-saws make good ones). As the sweep is turned the diggers work in a curve from the bottom of the ditch upward, leaving the bottom of the ditch clean and smooth; as the arms or diggers reach a horizontal line, the dirt is thrown off by a scraper, worked by a spring. A starting place is required to be dug to let down the diggers.

For moving forward, one of the bevel wheels on the upright drives a shaft running lengthways of the frame, on which is a large iron screw, connected with a wheel on one of the axles of the machine, on which the carrying wheels are permanently fixed; by this means, as the sweep is moved round like the horse-power of a thresher, the whole machine is moved forward at the rate of four to eight inches for each round of the sweep. The wheels are so regulated that the diggers come up between the sweeps. For covering the ditch for the horses to pass, a plank is attached to the hinder end of the machine; and for *guiding*, the forward axel is movable and can be guided by a pole running forward. The ditch is made four to six inches wide and two feet deep—but may be altered at pleasure by varying the length of the arms, or the width of the steel diggers.—ELISHA FENTON, *Clearfield Co., Pa.*

PRACTICAL POTATO PLANTER.

IN answer to a correspondent in the RURAL NEW-YORKER, Nov. 23, we stated we had never seen a practical potato planting machine. The result of that statement is that we have received the following from correspondents:

THEODORE P. LUKENS, Rock Falls, Ill., writes:—"Last Spring I used one manufactured by the Keystone Works (of this place) and was well pleased with it. It requires a man, a boy and a horse to run it; plants from six to eight acres per day, better than it can be done by hand; plants from one to eight inches deep, covers them well. A large wheel presses the dirt over them, leaving them a uniform depth. Can plant in rows both ways, or in drills; can plant with it on stony, stalky or stumpy land. They will not cost much; wish we had so good a machine for digging potatoes."

E. S. and A. S. BUNCE, Troy, N. Y., write:—"The only one we ever saw that would work on all kinds of land is Kent's Patent Potato Planter, manufactured at Palmyra, N. Y.; price, $65. It requires a boy to attend the feeding and man to drive the team. It will plant from six to eight acres per day; we planted forty-one acres with one last Spring, and we think they yielded better than those not planted by hand. It is simple and durable; one would last a man as long as he would want one."

A. S. NASH, Westport, Conn., writes: "Tell your correspondent of Cooper, Mich., that I think if he will write to Dr. HEXAMER, Newcastle, Westchester Co., N. Y., he will find out what he wants to know in regard to a 'potato planter.' I saw one there last Spring which I thought cut the potatoes, dropped and covered them all at the same time. I cannot say positively that it did all this, but I do not think that Dr. HEXAMER would be satisfied with a machine that simply dropped the potatoes."

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Price of Wood.—*Dec.* 2.—Mrs. RURALIST has lately returned from a visit to our old home in a Western State, which we left nearly twenty years ago. Of course she has much to tell me in regard to the various changes that naturally occur in the circumstances and surroundings of our old friends and neighbors; but none have impressed me more than the price of wood used for fuel. Twenty years does not seem to be a very long period in the history of a city or State, still it is long enough to show people their errors. The city to which I refer is located West of Lake Michigan, and twenty years ago the best of firewood, four feet long, dry and sound, delivered at one's door, could be purchased for two dollars per cord. This was at that time considered a very high price and a little above the market rates; and I once purchased ten cords of body hickory, delivered, corded up and measured in my own yard, for one dollar per cord. The man paid thirty-five cents per cord for cutting it, therefore received only sixty-five cents per cord for the wood and hauling it to market. The same kind of wood is now selling in that city for twelve dollars per cord, and is scarce at that. Now this is just double the price that I pay for hickory wood down here near New York city, where many persons suppose the forests were exhausted years ago. At the very time I purchased fire-wood at a dollar per cord in that Western city, there were men so visionary, and myself among the number, who advised farmers owning prairie farms to plant timber instead of trying to keep all under the plow and raise so much wheat and corn, which would scarcely command a price sufficient to pay for hauling to market. If I were a young man, with an inclination to become a farmer, I would go to a prairie country and raise Ash, Chestnut, Hickory, Larch and Maple trees, instead of oats, wheat and corn. At least I would not try to produce any more of the ordinary farm products than just enough to keep myself and family while the trees were growing. The land near my old Western home is not worth to-day, with all of its improvements, more than one-half what the original timber would have brought if left upon it until this time. It is true that the owners have received something from it during the time in the shape of crops produced; but I doubt if the profits are much above the cost of clearing and the increase in taxes. But it is useless to preach economy to an improvident people, for where one learns a useful lesson from the errors of others, a thousand will close their eyes and fall into the ditch with their heedless and short-sighted comrades.

Provoking Correspondents.—*Dec.* 3.—I do not blame newspaper editors if they do say some sharp things to their correspondents; and I am surprised at the equanimity of temper which most of them display amid all the little petty or great annoyances which constantly surround them. Of course, I am only supposing that those who write to newspaper editors are not particularly different from other people, and the omission of the name of the writers of important letters, or of the post-office, county or State, are daily occurrences in every office where hundreds and thousands of letters are received. My own troubles of this kind are enough to spoil my temper, and I have no inclination or desire to increase them by becoming an editor or publisher of a paper, great or small. But my troubles are even greater than pocketing a man's money who carelessly omits to sign his name or properly date a letter; for I am in receipt of several splendid collections of insects, and have no means of knowing from whence they come, or to whom I am indebted for these favors. Now, as I am very careful to have every insect in my cabinet ticketed with the locality where it was caught, as well as its name, these uncertain contributions are very provoking, even if ever so valuable. Besides this, the sender may think I am very remiss in those little civilities which should pass between correspondents; but under the circumstances, I have no other alternative than to scold in this public manner.

In sending plants, seeds, or anything else by mail, upon which the post-office laws do not permit any writing except the directions, always put some private mark in the form of a letter or number, and then inform the person to whom it is sent that such a package has been forwarded, giving a description of the same. It is always necessary to be particular in such matters, because the recipient may have a number of packages, the contents of each very similar, and all arrive by the same mail; consequently, he must have some sure guide to the identity of each. The only way is for every person to attend strictly to the business they have in hand, whether it is writing a letter or managing a locomotive, and never presume upon anybody's guessing powers.

Sporting of Bouvardias.—*Dec.* 4.—Bouvardias are among the most valuable and pretty of our Winter blooming plants, as their small, delicate-formed flowers seem never to be out of place in any style of basket, wreath or bouquet. Scarlet varieties and species were formerly the most common; but within the past few years several new white varieties have been introduced, the two most valuable sorts having originated in this country and are known as *Bouvardia Davisonii* and *B. Vreelandii*. Neither of these were raised from seed, but are what are called "sports" of the *B. Hogarth*, a well-known scarlet variety or species. Sports among plants are not rare, and many of our choice varieties originated in this manner; and while a majority of them retain their distinctive characters without any considerable variation, others will occasionally show a tendency to return to the original type. About a year ago I obtained a dozen plants of the *B. Davisonii* and their flowers last Winter were clear, silvery white; but, from some unknown cause, the flowers this Winter are of a delicate pink color. This change may be owing to a difference in soil, or the old scarlet blood of the original stock may be asserting its power in again coming to the light. If I did not know positively that my plants are genuine, there might be room for doubts; but, under the circumstance, I have only to conclude that "sports" have a tendency to produce other sports. I can imagine how some enthusiastic lover of flowers would scold the florist who was so unfortunate as to sell white Bouvardias that proved to be pink ones under certain conditions, and white under others.

Early Winter Blooming Plants.—*Dec.* 5.—The following are some of the best early Winter blooming plants now showing their flowers in my greenhouse, *Camellias* in varieties; *Bouvardias*, several species and varieties; flowers varying from a dark, brilliant scarlet to pure white. Double white Chinese primrose, always a favorite and blooming until Spring. *Stevias*, with their minute white flowers, are unsurpassed for filling up and giving bouquets a graceful appearance. *Eupatoriums*, with white or pale blue flowers, very handsome and excellent for bouquets. Geraniums of many colors, but those with pale pink or white flowers most desirable for Winter blooming. *Cuphea platycentra*, which is mainly used for a bedding plant, but it is a perpetual bloomer and its little scarlet flowers make a better show in the house than in garden. It is a pretty little plant requiring no special care in culture. Roses of various sorts, that were either kept in pots during Summer or potted early in Autumn are now in bloom. The Bourbons and Teas are the favorites, and those with pale yellow or white flowers are most highly appreciated during the holidays. Of course there are many other desirable plants which bloom at this time, but the above appear to give very general satisfaction and may be, with one or two exceptions, recommended on account of cheapness as well as beauty.

The Half-Mile Track.—In answer to "A Subscriber's" inquiry for directions for making a half-mile track, I give the following:—Lay off two straight sides 600 feet each (parallel) and 452¼ feet apart, connected at each end with a perfect semi-circle (radius 226¼ feet); place your fence exactly on the line so formed, (which is the inside of your track) and your track will measure exactly half a mile, three feet from the fence. If not convenient to get an engineer to run the curves, it can be done by placing a stake midway between the parallel straight sides at each end; fasten a wire to this and measure upon it 226¼ feet, which, from the center stakes, will exactly reach the ends of the parallel lines; then describe your semi-circle, beginning at the end of one of the straight sides and putting down a stake every twelve feet.—J. B. LEE, *Harlem Springs, O.*

Farm Economy.

WHAT EIGHTEEN ACRES PRODUCED.

UNDER the head of "Practical Experience" I read with much interest A. R. K's article showing that farming, if well done, will pay. I will now give you my experience for the present season on a farm of 72 acres, 18 of which were cultivated. My corn fields consisted of 9½ acres, 8 of which were plowed for the first time, it being used for a pasture over 40 years. Many old logs had been permitted to remain on it until April last, when, with boys and team, we pulled out the stumps and made a clean thing of it. It was rather a flat piece of ground and wild grass had got possession of a good part of it. Not having a team sufficient to break the turf (it being very heavy) I let it out for one-third of the crop. Plowing was finished about the 23d, and planting finished the 25th of May.

From the time it was planted a hoe was not taken into the 8-acre field, and the cultivator passed through each way once only, about the middle of June. Now for the result:—680 stooks were set up which produced a bushel apiece, making 680 bushels. I put in, and worked myself, 1¼ acres on old cultivated ground which was heavily top-dressed with manure, well cultivated and hoed twice, the product was about the same as the 8-acre field; thus you will see that old pasture land without manure is equal to old worked land with manure. The product of the 8-acre field may be thus summed up.

680 bushels ears of corn, at 40c	$272 00
280 stooks corn fodder at 10c	68 00
8 loads pumpkins, at $2	16 00
Total	$356 00
The 8 acres brought me	$118 66
Each acre	14 83
Labor expended, at	85 00

Leaving a clear profit of $152 to the men who did the work; so you see that farming can be made profitable if rightly conducted.

Potatoes raised, 100 bushels, on about half an acre of ground, which was also turf, same as corn ground, only more elevated and dry; no manure, twice cultivated and hoed; varieties, Peach Blow and Early Rose. Product, $60 or $120 per acre. Labor expended $12; nett profit on half acre, $40, or $80 per acre. Oats, 5 acres; yield, 160 bushels, or 32 bushels per acre; product, $64, or $12.80 per acre; cost of seed and labor, $24, leaving $14 for use of lands. The yield of oats is but ordinary, as it had been cropped three years and was seeded with grass seeds with the oats.

My system of farming is to plow as deep as my team will permit, thorough harrowing and clean cultivation. I also raised 1¼ acres corn fodder, sowed in drills 2½ feet apart, dropped in a furrow and covered with harrow drawn lengthwise of the furrow. Product about 4½ tons, with fully a peck of nubbins to each shock. I estimate the worth of the crop at $50, as hay is worth here now $20 per ton; cost of putting in crop not over $8. I consider this the best crop that the farmer can raise for his own use.

Summing Up.

Eighteen acres plowed, the products of which were $530. Cost of labor and seed, $120, leaving a net income of $401, or about 22.50 per acre. Wool raised, $58.25, beside a large quantity of garden stuff, butter, eggs, poultry, etc., all of which find a ready and high market here, as we are in the midst of the coal mines and iron works. I have expended but little of my time on the place myself; two little boys have done most of the work, except harvesting.

Let me say a word of encouragement to young men who have not farms and have nothing to buy with. I am a mechanic as well as farmer, and have earned, up to Nov. 15th and since April, $407.24 with a paint-brush. Go and learn a trade first, and that will get you a farm. H. W. MURRAY.

Trumbull Co., O.

ECONOMICAL NOTES.

Ramie Inventions Wanted.—When there was a great cry about the culture of the Ramie as a fiber plant a few years since, we stated that the chief profit that would be likely to be derived from it here for some time would be from a sale of the cuttings—that no machinery suitable for the preparation of its fiber for market existed here. Now we notice Ramie cultivators are crying for such machinery, and there is a chance for some inventor to do them, at least, service.

How to Fill an Ice House.—In a recent volume of the RURAL NEW-YORKER we gave illustration and description of the mode of filling an ice house, alluded to by the Utica Herald, which says that the ice house of L. R. LYON of Lyon's Falls, N. Y., has not been empty for twenty years, nor has a pound of ice ever been put into it. The building is constructed after the ordinary method, and when it is designed to fill it, a rose jet is placed upon the water pipe, and as the water comes through it is chilled and drops into the house, where it forms a solid mass.

COOKING FOOD FOR STOCK.

AT the Farmers' Club the other day Col. CURTIS said:—I have received a letter from O. D. WHITCOMB, Rodman, N. Y., asking a series of questions about cooking food for stock, and at a late visit to Beacon Farm I read them to WILLIAM CROZIER: and believing him to be at least one of the best farmers in this country, I give the questions and his answers:

How many cows do you feed?

Ans.—Ninety cows and other cattle.

Do you feed horses cooked feed entirely?

Ans.—Yes.

Do you feed horses any grain clear? If so, do you cook it?

Ans.—Feed no clear grain; cook all in Winter.

How much hay do you feed cows per day?

Ans.—I feed about three per cent. of the gross weight of the animal, of my mixed food; all of it steamed.

How many times do you feed per day?

Ans.—Twice.

Do you feed any raw hay?

Ans.—Sometimes a little for a change.

Do you feed straw mixed with hay or corn fodder or clear!

Ans.—Mixed.

How much hay do you consider a ton of good oat-straw worth for feeding cows, both being cooked.

Ans.—About one-third.

Wheat and barley straw?

Ans.—Good for bedding, unless cut before the grain is ripe: the grain must be lost to get value of the straw.

Sowed corn?

Ans.—Full as good as hay, if cut at proper time.

Corn stalks?

Ans.—Not so good.

Would you feed horses cooked food through Spring plowing and other hard work.

Ans.—No. Feed hard feed, hay and oats.

Will a steamer of 1,000 square inches of heating surface be large enough to cook for fifteen cows?

Ans.—A box eight feet long, four feet high, and four feet wide is about what I use. I do not know what he means by heating surface. A box fifty inches long and twenty wide would have a bottom surface of 1,000 square inches; make this four or five feet high and it might do him.

How long do you steam fodder, and with how much pressure?

Ans.—Two pounds pressure, and for three hours' time.

Do you feed mangel-wurtzel and other roots, and if so, cooked or raw?

Ans.—Yes: cut, mixed with the other food, and steamed.

How large a box do you use?

Ans.—128 cubic feet.

How often do you cook fodder?

Ans.—Every day.

Do you feed cold?

Ans.—No; blood warm, not hotter.

What length do you cut fodder?

Ans.—An inch, or an inch and a half. I would further advise him to manure well and plow deep, according to the old proverb.

Col. CURTIS adds:—I do not believe there is a better system of feeding than Mr. CROZIER'S. The roots, hay, corn fodder are cut, then mixed together, then dampened and kept warm on the top of the steam-box; then dumped into it mixed with bran and salt, and steamed. He has fifty horses and not one of them has had the influenza. I do not say that this feeding has prevented it, but I do say that this fact proves that animals fed on cooked food are not more liable to disease. I believe further that it is an economical plan, and that no farmer keeps his animals at a less cost than Mr. CROZIER; at the same time I never saw anywhere more active or more healthy-looking stock. Mr. COLTAN had been studying the chemistry of cooked food, and had come to these conclusions:—Steaming food is of value in the straws of grains like wheat, rye, and barley, merely to soften their flinty nature; in corn-stalks and roots it changes the starch into grape sugar or diastase, which is soluble and readily digestible in the stomach. Hence it renders such foods more nourishing and warming. I conceive a difference between the method of steaming and that of cooking in water.

Dairy Husbandry.

LIMBERGER CHEESE.—II.

Curing and Packing.

THE tables for receiving the cheese when taken from the molds have pointed ends for conducting off the whey, as illustrated (Fig. 3). The engraving is intended to represent the cheeses spread out on the table, with narrow strips of board separating the one from the other. These strips are kept between the cheeses for about twenty hours. The tables are also used for salting the cheese, but when that process is begun the strips of wood or narrow boards are removed, and the cheese (as the salting progresses from day to day) are piled up one on the other in tiers. It takes about one barrel of salt for 2,000 pounds of cheese. The salting being completed (or on the morning of the fifth day from the molds) the cheeses are removed to the curing cellar and set on edge close together on the shelves. The shelving is arranged on the sides of the cellar, one above the other, and each strip wide enough to hold two rows of cheese. On the third day after being placed in the cellar they are turned and rubbed, being set on the shelf on a different edge at each dressing.

The curing cellar is damp and the doors are kept closed and there is a strong smell of ammonia from the decomposing cheese in the apartment. The best temperature for curing is from 60° to 65°, though in Mr. BALTZ'S establishment, and in others which we visited, the heat runs higher during summer.

When they have remained about two months in the curing celler they begin to ripen and are fit to eat. They are now taken to the large storing cellar, previously described, where they are to be dressed and put up in cases preparatory for shipping to market. The cases are of two sizes, the one holding 48 and the other 54 cheeses. That is eight and nine rows of cheese, six cheeses deep. (Fig. 4.) After examing each cheese and dressing it, it is wrapped in rather heavy, but soft, pliable paper and placed in the case. Cheese going South, or that which is not immediately to be consumed after being shipped, is wrapped also in tin foil over the paper covering. That which is put up in tin foil brings about a penny a pound more than that covered only with paper.

Each case of cheese weighs about 100 pounds.

Under this process of manufacture it takes about 8½ pounds of milk to make a pound of cured cheese. At the factories owned by Mr. BALTZ the milk is purchased from the farmers at the rate of one cent per pound; Mr. B. manufacturing and furnishing everything in the business at his own expense. The average shrinkage on 100 pounds of Limberger cheese during the first six weeks is about three pounds, and for the next five weeks, or if kept until four months old, six pounds more, making in all about nine or ten per cent.

The leading features in making Limberger cheese, it will be seen, are that no additional heat is employed after setting the milk with rennet. No pressure is used upon the cheese during the process of manufacture. The salting is done on the outside and the curing is effected in a cellar where the atmosphere is charged with much more dampness than with other kinds of cheese.

We are told that American Limberger is not exported, and whether it can be made profitable for export we are not informed. The price at present does not appear to be any higher than for the ordinary American cheese. But as it takes a less quantity of milk on an average for Limberger than for American, some advantage is gained in this respect.

We should say that more labor is required to make Limberger than ordinary cheese, while the rapid decomposition of Limberger, or on account of its inferior keeping qualities, the risk of making and handling Limberger is much greater than on ordinary American cheese.

We visited other factories than that described, but as the process of manufacture did not differ materially from that which we have given, we need not go over the details again.

We are under obligations to G. C. BRADLEY, Esq., of Watertown, for kind attentions in driving us through the country to the factories, and in showing us his fine herd of Ayrshires on his farm in Pamelia. Jefferson county is becoming somewhat noted for its Ayrshires — thoroughbreds and grades—and they give good satisfaction for the dairy.

PRESERVING MILK BY BOILING.

WILL you tell me if there is, within your knowledge, any process of boiling the milk or heating it to the scalding point, in use among the dairymen of Orange county or any other portion of your State, supplying New York market with milk, with the view of keeping it for a longer time than it would without such process, or for the purpose of getting rid of the animal odor so that it may be kept for a longer time from souring. Will you tell me if you know whether heating milk to any degree ever did prevent it from souring as long as if it were cooled immediately after being drawn from the cow to, say, 5° Fahr.

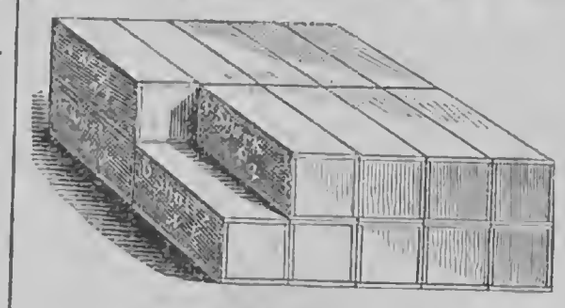
St. Louis, Mo. I. B.

THE only process of heating milk to the boiling point to supply the New York market—so far as known to us—is that employed in the condensed milk factories. We have heard of milk being heated to the boiling point and then tightly corked in bottles in order to preserve it in good order for family use. We understand a gentleman in Ithaca, Tompkins Co., N. Y., employs this method for keeping his family supplied with what milk is required for winter use. Late in Fall, when milk is rich and of good flavor, a quantity sufficient for Winter use is taken and thus treated.

The bottled milk is then placed in a cool place and, as we are informed, there is no trouble in keeping it in good order during the entire Winter. The bottles are not only corked but sealed with wax, so as to exclude the air as far as possible, care being taken to place them in as low temperature as practicable and not have the milk freeze. We presume, if the milk was exposed to Summer heat, it would not remain sound for any great length of time, but still for a longer time than it would if simply cooled and then put up in bottles, corked and sealed in the same way.

The preservative influence on account of heating to the boiling point and then excluding the air is entirely philosophical. The heating destroys the germs of fungi—living organisms—in the milk, and the air being excluded afterward, fermentation is arrested, and hence the milk remains sound longer than it would if not so treated.

It is to the same principle that various kinds of canned fruit owe their keeping qualities. If all these germs or spores could be destroyed, and none permitted to enter



PACKAGES.—FIGURE 4.

the milk afterward from the air, milk would keep sound for an indefinite length of time. This has been shown by the experiments of HALLIER & PASTEUR.

The question is one of considerable interest, and we hope our correspondent will give us the result of his experiments in this direction.

Chronic Diarrhea.—E. FITZ SIMMONS wishes a remedy for chronic diarrhea. My own case was cured more by carefel dieting than by medicine. I lived for some months almost exclusively upon milk, rice and chocolate. The rice was boiled with water till nearly done, the milk was added, and it was thoroughly cooked. I used Baker's best chocolate, and it was prepared with pure milk. Sometimes the boiled rice was made into cakes, with a very little well beaten egg, but no butter. I chewed some broiled steak occasionally, but swallowed only the soluble portions. I lived on this diet mainly for some time after the disease seemed about cured.—MEDICUS.

Arboricultural.

KANSAS TIMBER BOUNTY ACT.

IS there not a law in Kansas which is intended to encourage tree planting? If so, what are its provisions. By replying through the RURAL NEW-YORKER you will confer a favor upon a—PIONEER.

SUCH an act was passed in 1866, and continues in force until 1876, we believe. Its provisions are as follows:—Every person planting one acre or more of prairie land, within ten years after the passage of this act, with any kind of forest trees, and successfully growing and cultivating the same for three years, or one-half mile or more of forest trees, along any public highway, said trees to be so planted as to stand, at the end of three years, not more than one rod apart, shall be entitled to receive for twenty-five years, commencing three years after said grove or line of trees has been planted, an annual bounty of two dollars per acre for each acre so planted, and two dollars for one-half mile for each mile so planted, to be paid out of the treasury of the county in which said grove or line of trees may be situated. The bounty to be paid as long as said grove or trees are cultivated and kept alive, and kept in growing condition. That the county assessor shall not assess lands planted and encumbered with forest trees any higher than the lands adjoining, on account of the said lands being so encumbered.

A DOUBTFUL FREAK.

WE often hear that "there is nothing new under the sun;" and as Solomon has said so, it might be unjust to dispute it. But, occasionally something meets our eye that we confess is new to us in this latitude, and, perhaps, some of the numerous intelligent readers of the RURAL NEW-YORKER can solve the difficulty. About twenty years ago Mr. ROBERT A. REID of Summerville, near Augusta, Ga., planted in his garden a genuine *English walnut*, which grew and flourished until it is now about twenty feet high and eight inches in diameter, but never bore fruit until last year, when, as anticipated, it produced a small crop of *walnuts*. This year it bore again, producing a larger crop, but, to the astonishment of Mr. R. and his neighbors, the fruit at this time is real *pecan nuts*. Is it not as likely to produce some other variety next year? T. W. COSKINY.

WE must be excused from not believing that a tree produced English walnuts, (*Juglans regia*) one year and Pecan-nuts (*Carya oliraeformis*) the next. If the tree to which you refer has done so, you may well ask "Is it not likely to produce some other variety the next year?" It may produce butternuts, acorns, or even a bale of cotton would not be much farther out of the natural order of things. But there must be some mistake about this wonderful tree and its products, and we advise Mr. R. to keep a sharp lookout for fraud; for some of his workmen may be playing a joke on him; for the pecans, no doubt, came from a pecan tree.

ARBORICULTURAL NOTES.

Turpentine for Bark Lice.—A. C. BRINTON of Wilmington, Del., writes us that he has tried spirits of turpentine for bark lice with excellent results. Having an old paint brush that had become hard for want of proper care, he soaked it in spirits of turpentine, working out the paint until the brush was soft and pliable. Then, instead of throwing away the mixture, he went into the orchard and applied it to one apple and a pear tree, which were infested with bark lice. The trees were thoroughly painted from top to bottom, the application being made last April; and at this time the trees are in a flourishing condition, and no lice or their shells to be found. We had supposed that ordinary paint, as well as spirits of turpentine, were injurious to trees; but they may not be when applied to the bark before the leaves appear. The experiment of killing bark lice with turpentine is worth a trial by those who have apple orchards infested with this great and constantly increasing pest.

Grafting and Budding the Hickory.—Can you, or any of the readers of the RURAL NEW-YORKER, tell me how to graft or bud successfully the common Shell-bark Hickory.—CYRUS KISLER, *Locktown, N. J.*

WE have never seen the Hickory grafted or budded successfully, although some of our best propagators of plants are constantly trying both of the processes upon new sorts. Grafting upon small roots plunged in frames under glass, has been tried with better results than in the open air; still they were not very encouraging. It may be that some one may discover where the secret of success is hidden; and we shall all learn it before many years; but in the mean time we would advise those who wish to multiply choice sorts to try growing from small root cuttings, the same as our florists propagate the *Bouvardias*. We know of one experiment made with root cuttings that was a success, and believe that this will prove to be the best method of propagating particular varieties. The cuttings should be lifted in the fall, and then started in a prepagating pot or hot-bed.

Preparing Ground for an Orchard.—Mr. IRA BENNETT writes us telling how he has prepared his clay soil for planting an apple orchard next Spring, as follows: "I have plowed the ground, turning four furrows together, just two rods apart. This places the trees all on the ridge. I then set out stakes on each side of the lot, two rods apart, and dug the holes, going straight from one stake, across the furrows, to the other. I then took chip manure (which had been accumulating for a number of years) and put about one bushel in each hill. Thus I think the ground will be in splendid condition for the trees in Spring, after thoroughly mixing the soil with the chip manure."

Entomological.

THE TREE CRICKET.

INCLOSED find specimens of grape vine wood which contain eggs of some insect. Vines that have overborne fruit appear to be the only ones attacked. Please give name of insect if possible.—W. L. D., *Clyde, N. Y.*

THE eggs are those of the common Tree Cricket (*Œ. anthus nivens*, HARRIS). CHAS. V. RILEY, State Entomologist of Missouri, says that the female deposits her eggs in grape vines, raspberry and blackberry canes, and in the twigs of various kinds of trees. In depositing her eggs she makes a straight longitudinal, contiguous row of punctures, each puncture penetrating to the center or the pith of the twig. By cutting open one of the infested canes, such as you have sent us, the eggs may be plainly seen with the naked eye.

The punctured canes usually die above where the eggs are deposited, therefore we may safely place our white wood cricket among the injurious insects. We have received several specimens of vines from various localities that were infested with the eggs of this insect, and we conclude it is doing more or less damage to vineyards in all parts of the country.

BEETLES FROM ALABAMA.

INCLOSED you will find two beetles; one, I think, is the *Amblychila*, which I captured in this State last Summer. Please describe and name the inclosed two beetles; by doing so, you would very much oblige—ED. ZIPPERLEN.

THE beetles sent are both Scarabæans, and do not bear the slightest resemblance (except in the number of legs—and all the beetles are alike in this respect) to the *Amblychila*. The largest specimen, with three horns projecting from the top of the prothorax, is a very common beetle in some, if not in all of the Southern States. Its name is *Strategus antæus*, BURM. The smaller specimen, which is about three-fourths of an inch long, prothorax tapering regularly to the head, and of a beautiful green color, sometimes slightly striped or tinged with orange color, is a still more common beetle occurring in the Northern States as well as the Southern, and was formerly known as *Scarabæus nitida*, LINN., but in later Entomological works as *Allorhina nitida*, BURM., or the Shining Allorhina. The larvæ of both of these beetles live upon vegetable matter, either in its fresh state or when decaying.

Land Department.

FROM BLUE RIDGE MOUNTAINS, NORTH CAROLINA.

I AM residing among the Blue Ridge Mountains of North Carolina; am a New Yorker; have been here only half a year. It is a fine grazing and stock raising country, abounding with the finest spring water. The climate in Summer perfectly charming; the nights so cool that a fire is agreeable nights and mornings up to the middle of July, commencing with them again as early as the middle of September. There was no night during the past Summer, not one, that we did not sleep with the doors and windows of our room closed, there being a fire-place in the room sufficient for ventilation; always one, sometimes two blankets on the bed. I have been in many parts of this country as well as various foreign lands, but never passed a Summer where the climate was so agreeable in all particulars.

The whole mountains are filled with the most beautiful wild flowers I ever saw in any country, surpassing, by far, anything I saw in the so-called "flowery land" of China. Among the most beautiful are the Honeysuckle, Ivy, and Laurel. The finest of the first mentioned is a deep orange and red, of many shades, in large masses, nearly covering the entire bush, which grows from twelve to fifty feet in hight; several other varieties are pink and white.

The Laurel is still more beautiful, the leaf a thick, deep, glossy green—an evergreen resembling the Magnolia. The flowers in large clusters, of a delicate pink and white, as fine as wax. Another variety, purple. In fact we have a great profusion of wild flowers, commencing to bloom early in April, continuing until nearly the middle of August. From that time we are destitute of flowers, as none are cultivated. The ladies(?) here devote their leisure time, and the larger portion of their gardens to the raising of cabbage and snap beans, in which refined occupation they are very successful. Many of the above named flowers would be a great acquisition, and grace any conservatory.

I am sorry I cannot say as much for the inhabitants of these mountains. With few exceptions they are uncouth and uneducated, there being no towns and the railroad fifty miles away, they have mingled but little with the outside world, and know less of its great financial and social status. The great masses have never heard of a HENRY WARD BEECHER even—never heard of the Duke ALEXIS; have just heard of the great fire in Chicago, and know that GRANT and GREELEY do exist. This state of society exists to a great extent through the entire range of mountains in this State and for many miles along the borders. They should not be blamed, however, having never seen anything, are not expected to be very well posted. They are generally honest and make good neighbors as far as they know, being entirely ignorant of the conventional rules of society.

For stock raising and dairying, this section, extending into Virginia, has not its superior in the whole country. Settled with enterprising men, and, to a certain extent, educated agriculturally, it would become a profitable and very interesting and pleasant section of the United States. With the railroad that is expected to pass near here some future time, that class of men will, no doubt, follow. Farms can be purchased here now from $2 to $8 per acre, improved.

I forgot to mention that the small fruits, including apples and peaches, abound in great profusion from June till Fall. North Carolina is the banner State, I believe, for dried fruits; single families drying from 1,000 to 1,500 pounds of blackberries, requiring from 100 to 130 bushels of the green berries. One merchant, a few miles from us, purchased nearly one hundred and twenty-five thousand pounds the past season, and other fruits in proportion.

I know it is not generally supposed at the North, that cool weather can be found in the South in Summer, but we have the climate of Maine here in Summer, without the cold Winter, of course this climate is confined to the mountain range—thirty or forty miles in any direction the Falls, Winter, and Springs are delightful. We do not usually commence feeding cattle in the mountains till near Christmas; and it is not absolutely necessary to shelter cattle or sheep in Winter. NORTH CAROLINA.

Floricultural.

COLLETIA BICTONENSIS.

THIS plant is highly commended in England as a hedge plant. It is said to have originated in the arboretum of the Baroness ROLLE. Sir WILLIAM HOOKER named it and considered it a distinct species of a very useful and interesting order of plant. It is easily propagated by cuttings. It is proper to say, however, that the Editor of the Cottage Gardener doubts if it can be used for hedge making, if the statement of Sir WILLIAM HOOKER that it is not a hardy plant, be a true one. It is asserted that its leaves are very fleeting, and only to be seen on the very young branches and spires. The branches are of a pea-green color, arranged in the peculiar decussate manner shown in the engraving, and having sharp, hard, brownish-red spines at their ends; the petaloid floral covering is waxy-white, with a greenish, substantial looking base formed by the fleshy ring found at the bottom of tube, and which is peculiar to the Colletias.

COLLETIA BICTONENSIS.

WALKING FERN.

(Camptosorus ryzophyllus.)

THIS singular and interesting little Fern is found in rocky woods. It grows in the almost soilless niches of rocks, or gets a sufficient foothold on their naked inequalities. It is quite rare, and during several years my searches in the woods were unrewarded with a sight of its odd little leaves, till one day, ascending a low mountain in this town, in a quiet, mossy slope of gray rock, far above my head, a company of these little "Walkers" was discovered, though it was not till some time after any leaves were found.

The frond is simple, reticulate veined in the midst, and forked only at the margin. It is undivided, lance-shaped, with heart-shaped lobes at the base, and the apex attenuated into a long, slender acumination, that often bends over backward and takes root, giving rise to a new plant. Thus, the fern takes one step a year. I never have seen one that had stepped twice.

The fruit dots are variously shaped, and scattered without order on the transverse veins, slanting, and at various angles, often in pairs and facing each other, looking something "like writing"; hence its Greek name—*Antigramma rhysophyllon* of PRESL. It can be cultivated in the same manner as other wild ferns, always taking care to give it a soil and atmosphere as near like its native own as possible, remembering it needs little light, much water, and to be let alone.

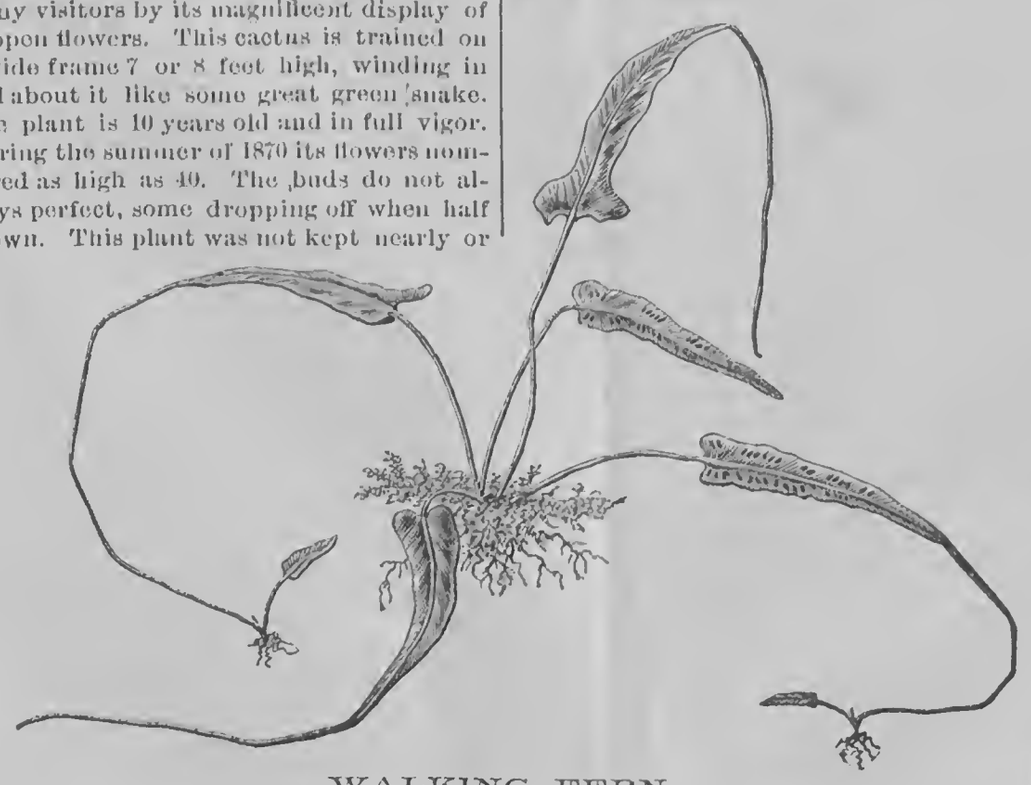
Ferrisburgh, Vt. R.

FLORICULTURAL NOTES.

Splendid Night-Blooming Cereus.—A correspondent of the Gardeners' Monthly, at Reading, Pa., writes:—"On the night of the 2nd of July, 1872, a very fine plant owned by Miss KITTY GEHR of this city, attracted many visitors by its magnificent display of 24 open flowers. This cactus is trained on a wide frame 7 or 8 feet high, winding in and about it like some great green snake. The plant is 10 years old and in full vigor. During the summer of 1870 its flowers numbered as high as 40. The buds do not always perfect, some dropping off when half grown. This plant was not kept nearly or quite dry, as is often done in Winter, but moist, and when growing and budding was watered freely. The owner said she had tried the drying-off process, but her plant did not bloom. In Winter it is kept quite warm in a sort of pit greenhouse. The earth is made very rich and somewhat sandy.

A new Calycanthus.— A writer in the Farmer and Gardener states that he has a White flowering variety of the *Calycanthus florida*, or common Sweet Scented Shrub. He says:—"I have had these plants under cultivation several years. They are decidedly more vigorous growers than the dark variety. The flowers, which are straw-colored, are also larger and more fragrant, bloomed through the past dry Summer until frost. I do not know that they will produce the same flowers from the seed, but why should they not do so when they have preserved their original characteristics, though surrounded by the dark flowering varieties ever since they were first known here, more than thirty years ago." If the above is true, and we have no reason to doubt it, this new variety of an old and very popular shrub will certainly be a valuable acquisition to our gardens..

A New Bedding Plant.—We have received from HENRY E. CHITTY, Superintendent of the Bellevue Nurseries, Paterson, N. J., a specimen of a new bedding plant known as *Salvia splendens alba compacta*—or, in plainer language, a white variety of the common Scarlet Sage. The plant is similar in habit to this species, the principal difference being in the color of the flowers. We think the lovers of choice bedding plants will hail this novelty as a great acquisition.



WALKING FERN.

Pomological.

FRUITS FOR MISSISSIPPI.

JAMES PARKER, Summit, Miss., under date Nov. 30, 1872, sends the following to Our Home Journal:—The following varieties I can recommend to be reliable and free from spotting:

Early—Red Astrachan, Garretson's, Early Primate, Rhodes, Orange.

Autumn—Belle de Haver, Carter's Blue, Alaska, Elgin Pippin.

Winter—Hocket's Sweet. This I have seen fruited the past season, and in every way both tree and fruit are perfect and reliable; although ripening in this locality before its time, it is one of the best late apples in the whole list. Cartor or Mangum, Stevenson's Winter. Yates'—This is a medium-sized red apple, juicy, firm and of a fine aromatic flavor. The tree is a fine grower, and bears enormously.

Best Twelve Pears for Market or Family Use.—This list embraces all that would be wanted in the Pear line. Early Doyenne d'Ete—the best and most reliable of all early Pears. Bloodgood. Beurre Gilfard—its only fault is that it is a very slow grower, but bears young on Quince. Osband's Summer—a fine Pear and well adapted to various parts of the South. Tyson, Medium Bartlett, Duchesse d'Angoulemc, Buffan, St. Michael, Beurre d'Anjou, Beurre Superfin. For late—Lawrence. The varieties above named hold their foliage throughout the Summer, and perfect their fruit.

Best Six Freestone Peaches for Family Use.—Early Tillotson, Large Early York, Crawford's Early, Crawford's Late, Stump the World, Baldwin's October.

Best Six Clingstone Peaches for Family Use.—Chinese Cling. Old Mixon Cling, Newington, Lemon Cling, Bennett's, Mammoth—larger than the Chinese Cling, yellow, with a dark red cheek.

Grapes, for Table or Wine. Delaware, Concord, Ives' Seedling.

Strawberries.—Wilson's Albany, President Wilder, Triomphe de Gand.

Raspberries.—Doolittle's Black Cap, Mammoth Cluster.

Quince.—Orange best for family use.

POMOLOGICAL GOSSIP.

Red Hawthornden Apple.—I notice an article in the RURAL NEW-YORKER, Dec. 7, concerning "Red Hawthornden." Why do you call a *white* apple, with an occasional blush cheek, "Red Hawthornden?" I have grown the Hawthornden with great satisfaction for many years. It is a great producer of very uniform fruit, and sells well in market for culinary use, but is not so good for the table as the Maiden's Blush, which it closely resembles. It relieves itself of its surplus fruit somewhat prematurely, but always perfects a Fall crop. But it is in no respect entitled to the *prefix* "Red" to its old-fashioned name. Better continue to call it plain Hawthornden, and then we shall understand what apple we are talking about.—J. D. G. NELSON.

IF our good friend will read the article to which he refers, again, he will see that we were quoting from an English journal a description of a fruit known locally in England as "Red Hawthornden;" and if he compares that description with DOWNING'S description of "Hawthornden," or the old "White Hawthornden," he will see some dissimilarity, although the two apples may possibly be the same. But in England the apple is known as Red Hawthornden, and as such we gave it.

Peake's Fall Apple is described as an October apple from South Carolina, resembling the Rawle's Janet in tree and fruit. The Prairie Farmer thus describes it: Shape flattish-conic. An ordinary specimen of the present year measures 2¾x2¼ inches. Calyx medium, rather open in a shallow and small basin. Stem rather long and slender in a deep and open cavity. Flesh white, brittle, very juicy, of a sprightly acid, and good to very good in quality. Capsule rather small, closed, with rather small brown oblong and not plump seeds. Season here November rather than October, and would probably keep through December. A little further North it would become a Winter apple. Tree vigorous, but not a strong grower thus far.

Apples for Northern Ohio.—I. B., Medina, O., wants to plant an orchard of 200 trees in Spring, and asks our correspondents from that region to inform him what four kinds will succeed best there.

The Swine-Herd.

IMPROVED CHESHIRES.

THE following is the report made to, and adopted by, the recent Swine Breeders' Convention at Indianapolis, upon this family of swine:—These hogs originated in Jefferson Co., New York, and it is claimed by some of the breeders that they started from a pair of pigs bought of Mr. WOOLFORD of Albany, New York, which were called Cheshires. However that may be, there is no such distinct breed of hogs known as Cheshires in England, and there is no record of any hogs of this name having been imported into this country.

Yorkshires have been imported into Jefferson county from time to time, and the so-called Cheshires have been improved by crossing with their best hogs bought in Canada. Mr. A. C. CLARK of Henderson, was for a number of years a prominent breeder of these pigs, and he informed us that whenever he found a pig better than those he owned, he purchased it and crossed it upon his own stock. In this way this family of hogs has been produced, and they are now known and bred in many portions of the United States. Their breeding in Jefferson county has diminished during the last two or three years.

They are pure white with a very thin skin, of pink color, with little hair; are not uniform in this respect, as pigs in the same litter differ widely in the amount of hair; the snout is often long, but very slender and fine; the jowls are plump and the ears erect, fine and thin; the shoulders are wide and the hams fuller; the flesh of these hogs is fine-grained, and they are commended on account of the extra amount of mess pork in proportion to the amount of offal; the tails of the pigs frequently drop off when young. F. D. CURTIS, Chairman.

Chester Whites.—The following is the report adopted relative to this breed, by the National Swine Breeders' Convention:

To the President and members of the National Swine Breeders' Convention: The undersigned delegates to this convention submit a history and scale of points of the Chester White Hogs as follows:

After a full investigation, and of personal knowledge on the subject, may say the Chester Whites, as a breed, originated in Chester Co., Penn. The first impulse to the improvement of swine in this country was induced by the introduction of a pair of fine pigs, brought from Bedfordshire, in England, by Capt. JAMES JEFFRIES, and put upon his farm near the county seat of Chester county, in 1818. Some of the enterprising farmers of the neighborhood, seeing those fine pigs, were induced to commence an improvement of their swine by crossing these with their native white hog; their progeny with the best selection attainable in the county; and by careful and continued selection and judicious crossing for a number of years, have produced the present valuable, well-formed, good-sized, easily fattened and good bacon hog, called Chester Whites, and now a well established breed.

The following may be given as scale of points:

Heads short, broad between the eyes; ears thin, projecting forward and lap at the point; neck short and thick, jowl large, body lengthy and deep, broad on back, hams full and deep, legs short, and well set under for bearing the weight; coating thinnish white, straight, and if a little wavy not objectionable; small tail, and no bristles.

THOS. WOOD. } *Com.*
W. W. THRESHER }

FATTENING HOGS.

A WRITER in the Prairie Farmer gives his experience as follows:—"I was just beginning to farm, and as I was desirous of knowing the best way of fattening hogs, I determined to try the different plans, and also how much pork a barrel of corn will make. I made a floored pen and covered it in. Weighed three hogs and put them in the pen. I also weighed three of the same size and put them in a dry lot—average weight, one hundred and seventy-five lbs. I fed six barrels of corn to the six hogs. They were forty days eating the corn, with plenty of salt and water. Their average gain was seventy-five lbs. The hogs in the lot gained the most. One that was fattened in the lot gained eighty lbs. One in the pen gained eighty-four lbs.; the other four were not so thrifty.

These hogs were about fourteen months old when slaughtered. I put them up the 25th of October. There was a good deal of sleet and snow during the month of November, which gave the hogs in the pen an advantage they would not have had if the weather was favorable; they ate the same quantity of grain in the same time. It also shows that one bushel of corn will make fifteen lbs. of pork.

The Horseman.

NOTES FOR HORSEMEN.

Care of Capped Hock.—F. H. HARRISON has a mare that is not lame nor sore; and yet her gambrel joint is one-third larger than is natural. It does not disturb her any. When he presses on it his finger indents about one inch; when the finger is taken off it recovers its fullness. She feeds well, feels well, is twenty months old. Asks the cause and for a cure. It is evidently a case of capped hock—the result of a bruise in some manner, usually occasioned by kicking in stable or harness. The only remedy we know of is to fit a piece of canvas to the hock, over the point, and tie it over the point by means of tape in front of the leg. Pressure is desirable, and the application of a lotion composed of three ounces of tincture of arnica, two ounces muriate of ammonia, four ounces methylated spirits of wine and three pints of water, mixed. Apply frequently. The enlargement may thus be removed, but a slight injury will cause it to return.

Apples for Sick Horses.—A correspondent of the Country Gentleman says: "All my horses have been attacked with the prevailing disease, and my main object has been to keep them warm, clean and comfortable, and to give them succulent food and such as will operate as an expectorant. There was enough green clover left of the second growth which I had mowed as their principal food, and I gave them several quarts of fresh apples three times daily. The consequence was, my horses had the disease exceedingly light—the one first attacked began to amend decidedly within a week. I found that I had a large quantity of windfalls in my orchard, which in this abundant season had not been regarded as worth gathering, and these furnished about twenty bushels of food for the horses. Apples are a well-known expectorant, and they relieve the cough materially."

Stifled Horse.—I see in the RURAL NEW-YORKER of Nov. 30th, a correspondent asks for a remedy for a stifled horse. I have cured with the following, in twelve hours, viz:—The white of three eggs, a tablespoonful of salt and two tablespoonfuls of soft soap, beat into a salve. Put a harness on the horse so as to keep the collar to the shoulder; tie a strap to the lower end of the collar, pass it between the fore legs around the fetlock of the well leg, and draw the leg up so that the horse will bear his weight on the lame leg; then rub the liniment on the stifle and heat in with a hot iron; this will cure a recent stifle.

What will take a puff of from a horse's leg? The puff is on the front of the gambrel joint, and of recent date.—A. C., *Huron Co., O.*

See answer to correspondent under the head "Capped Hock."

Horse Influenza.—The horse disease has prevailed extensively in this section for the past two months; it is not fatal here. My horses have had it, but are nearly over it now. I think rest about the next best thing for them. If I was obliged to take them out for a short time, I was sure not to work them but a little and get them into the barn as soon as I could, and put a blanket on them for a few hours. I have seen tar and sulphur used in the stables with good effect; kept in the manger as a preventive—not given to the horse. If this will be of any benefit to C. F. G., you can print it.—N. W. JOHNSON.

Horse with "Cramp."—I have a valuable horse that occasionally has what seems to be cramps, and is unable to step on the leg; never known to occur only when standing. Can you suggest any remedy?—J. B., *Rural Grove, N. Y.*

WE are sorry to say that we cannot make a suggestion; for there are so many causes which might cause similar action that we of course, cannot tell, at this distance, the particular cause.

Scientific and Useful.

A NEW ART.

THE true artist, with wonderful power, reveals to our common sight, what his poetic eye alone first saw. Under the sculptors plastic hand, a shapeless mass of clay is fashioned, by slow and studied process, into forms of life and beauty. With here a touch and there, the outlines slowly unfold, as in the fable, genii came forth from the vague mist, until at last is disclosed, well-nigh a new creation, seemingly alive, and bearing the subtile impress of his artistic power.

On this as a model, a workman measures lines and spaces, and carefully transfers them to the block of marble, in which he is to copy the sculptor's work. At each point thereon, thus marked, he drills a hole down nearly to the surface of the subject within, and with chisel and mallet anxiously cuts away the superfluous material. When the outlines appear, he smooths them with rasp and file—and thus proceeds, with painstaking labor, to shape in enduring marble what the artist wrought in fragile clay.

The elevation of popular taste, together with an increase of average wealth, demands new objects of art and beauty, to decorate and adorn our homes, and enhance the joys of common life. The works of the painter are reproduced for us, in photograph, which though lacking color still portrays the artist's conception; or in chromo, with tint and line, marvelously like the original. Copies of the sculptor's art are more rare—the cost of artistic labor, necessary to their production, limits their number.

In the ripeness of time, the means of supply quickly follow a new demand; and now the works of the sculptor, the carver, and others of minor branches of the same art, are copied by machinery, with cheapness and fidelity. To illustrate how this is done, place the model, and the block, from which the copy is to be cut, side by side; suspend a small and pointed pencil over the model, and a cutting tool, shaped like the pencil, over the block; both in a frame, free to move in any direction, so that as the pencil is raised, lowered, or thrust in or out, the tool is moved similarly; it is evident, that by causing the pencil to follow the outlines of the model, like outlines will be cut by the tool, in the block.

In practice, this is accomplished in like manner; the model and block are fixed to a frame hung on horizontal pivots, and also capable of movement, in and out. A steel point is used as tracer, instead of the pencil, and shaped somewhat like it. The tool, also of steel, has at its lower extremity, cutting lips or edges, such—that when rapidly revolved, it will cut, in any direction it may be moved, a groove or furrow, in width equal to its diameter. The tracer and tool are attached to a balanced frame, suspended above the other frame, and free to move, up and down, right and left—so, that when the tracer is over the model, the tool is over the block. The tool is driven by suitable means, 3,000 to 5,000 turns per minute.

The model being permanently attached, the block to be cut placed, and the machine in motion, the operator with one hand upon the tool frame, and the other upon the model frame, follows with the tracer, line after time of the model, and the tool copies each upon the block; the chips fly off in streams, and disclose the figure they hid within.

Generally, the tracer is moved upon the model, back and forth, in adjacent lines, and the model frame slowly revolved to keep the surface in contact, with the tracer and tool, nearly normal to them; by simple devices these movements are made automatically. To make more than a single copy at one operation, it is only requisite to extend the frames, to receive several tools and blocks, instead of the one described; then, as many copies may be cut at the same time, from one model.

To copy the delicate surface of certain subjects—as the plumage of a bird—tracer and tools with fine points are used, after larger and coarser ones have removed most of the surplus material.

In this way duplicates are rapidly and accurately made, needing for completion, only to be polished by hand labor. Thus far, the process has been chiefly employed to multiply in wood, figures of animals, or the human form, full and in relief, and ornamental carvings, for decorating furniture, or adding to the interior finish of dwellings. These are superior to those made by ordinary hand work, and the cost is less than one-fourth as much.

In marble, or other refractory material, a tool, tipped with diamond points, substituted for the steel one, cuts quickly, and endures well. By changing the adjustment of the machine, copies are made, larger or smaller than the original, or to grotesquely carricature it.

The production of articles of use and beauty, by this method, is only limited by the demand for them; this will increase as the cost lessens, and other and more varied applications of the art will follow; thereby widening the sources of innocent pleasure, and supplying new means of cultivation and refinement.

This process is a noteworthy instance of those sterling improvements in the mechanic arts, whereby time, which alone limits man's effort, is constrained to yield more and better fruit. It embodies a noble aim—to loosen the bonds of necessity, and by adding to the results of a common industry, give men more leisure for higher pursuits, and greater opportunity for thorough culture.

"He who blesses most, is blessed:
And God and man shall own his worth,
Who toils to leave, as his bequest,
An added beauty to the earth."

The Poultry Yard.

POULTRY NOTES AND QUERIES.

To Fatten Chickens, give them plenty of room, fresh air and plenty to eat. The meat is better when so treated than when fattened in coops. Put twelve fowls in a pent-up coop and they will soon be like the Andersonville prisoners, so full of vermin they cannot fatten. A recent writer in the RURAL NEW-YORKER says that when a fowl is sufficiently fattened it should be killed; otherwise it will get no fatter, but lose flesh. I wish him to explain how that can be. I, an old farmer, have always thought that the longer I fed a fowl the fatter it would be. Will he please explain to an old man the philosophy of that sort of fattening?—F.

To Prevent Hens Eating Eggs.—Six or eight years ago I was troubled with hens eating eggs. I found that hens would lay more, and much more regularly by having a nest egg. This egg freezes and bursts open. When the hen visits the nest the egg gets warm and sticks to her. She carries it from the nest, and, with the other fowls, eats of it. If R. P. S. will take some kind of white wood and turn or whittle out wooden eggs for nests, his troubles will be at an end. Keep the nests clear of fresh laid eggs.—WM. BALL.

Feeding Turkeys.—A correspondent of the Country Gentleman feeds his turkeys in a trough covered by a board, but with openings left so that the birds can just get their heads into it. The corn is put in this and kept in good supply. Thus the turkeys can always get to it and grow fat.

Chicken Cholera.—A little sulphate of iron in the drinking water of chickens and a change of food is said to prevent the spread of cholera in a flock, but does not cure the ill ones.

The Apiarian.

BEE NOTES AND QUERIES.

Bees Dying in Kansas.—What ails my bees? I have one swarm of Italian bees, obtained last July. They are now in Winter quarters—*i. e.*, a protection of boards, with hay packed closely around the hive, except in front, which is (except the lighting board) sheltered from the rays of the sun. They have fully 25 lbs. of fine honey. Have kept the entrance closed in cold weather. Is this right, or should it be partly open for ventilation? To-day being very warm (thermometer standing 105°), I let them out, whereupon they immediately commenced dragging out dead bees, dropping them outside of the hive, but sometimes carrying them off several rods. At first I supposed these victims were all dead; but, on close observation, found some alive, two of which I rescued. They walked over my hands, running and rubbing themselves, and finally flew away. I could see nothing wrong with them. Are they sick? Have they lost their queen? Or is it natural for them thus to die? What must I do to save them? for at this rate they will all be dead by Spring.—MRS. M. L. B., *Sedgwick, Kan.*

Domestic Economy.

HOW TO MAKE A COAT.

HAVING recently cut and made an overcoat, I thought how many women would like to learn how to make this garment, as the tailoress does not go around sewing in families as she formerly did. How many boys, in stormy weather, might learn to make their own clothes on a sewing machine, if they had printed directions in their weekly paper for doing this. We cannot prize those papers too highly that teach us how to do needful work, that all may know how to obtain an honest living, and be useful instead of idle.

Having cut the coat, commence and sew up all the seams except those that join the fronts to the back, and press them. Fit the openings in the canvas to those in the outside; then close the openings with an overstitch over a strip of linen an inch in width; then prepare a double strip of linen, one inch in width, and fasten it to the canvas under the thread marks for the buttons, with a semi-cross stitch; then carefully overstitch the canvas to the lapel on the body of the coat; then dampen and press and baste the whole canvas to the outside, so as not to cramp it.

Then mark and cut the pocket-hole, and insert the pockets, with another coat before you as a guide; then sew the seam in the back of the lining, baste the wadding on the wrong side and some thin cloth over the wadding to come next to the outside of the coat; quilt this lining according to your fancy, and baste the outside to it.

In basting, lay down the lining and place the outside over it so as not to get the lining too close fitting for the outside. Baste the wadding to the front lining with thin cloth between them and the outside, and quilt. Then sew up the seams in the outside that join the fronts to the back and press them; then sew these seams in the lining together, having the front of the lining come under the facings smoothly; baste and sew down the facing, then join the shoulder seams; press and face the inside seams one upon another.

Face the sleeves at the hand and sew them in; have the outside or only seam half way between the seams of the back, and the fullness begin two inches in front of the shoulder seam, and continue to within three inches of the middle of the sleeve; then press this seam on the round end of the press board; then press the canvas if necessary, and baste with small stitches to the seam of the coat and hem the sleeve lining to it; then hem the linings on the hand facings; then baste the stiffening to the lower side of the collar; stitch the lower part in straight lines; then overstitch on the canvas side the part that turns over; then press and break the collar to its proper shape; then over-baste the cover to the break; baste all around, turn in and hem the collar to it; sew the under-side of the collar to the outside of the coat; press, fasten the lining to it and hem down the cover. Stitch around the coat and cut the button holes, and work them over a cord of linen thread, four double. Press and sew on the buttons and a loop at the back in the inside, and hang it up. G.

BEANS AND VINEGAR.

I NOTICED an article in the RURAL NEW-YORKER Dec. 7, that upsets my ideas in regard to the conversion of cider into acetic acid. The writer states that a pint of beans put into a barrel of cider will change it into vinegar in a short time. Having somewhat extensive orchards, I have during the past thirty years, especially in seasons of abundant crops and limited markets for fruit, experimented with my cider in various ways. I have paid extravagant prices for foolish and impracticable recipes and plans of buildings, generators, etc., from none of which I received a farthing's benefit, but experienced a vast outlay of patience and money. I have also frequently tried receipts as published, from some of which I thought I had obtained some pretty good ideas; but I find that after all "I don't know beans!" All my experience is averse to the use of any such foreign substance as beans, and thought I had arrived at some practical conclusions that approximated quite satisfactory results. But as we have all much to learn if we would perfect anything, and as there is scarcely any one thing in the matter of domestic economy more to be desired and more difficult to satisfactorily accomplish than to convert cider into vinegar, by a simple, quick and easy method, I hope Mr. NORTH will explain the extent of his experience. But, until I have more light upon the subject, I shall pursue my present method that never disappoints me, and which has been given to the public many times through the RURAL and other mediums. I can very well understand how six or eight ounces of mustard will keep a barrel of cider sweet; but I cannot understand how one pint of beans will turn it into vinegar.

While upon the subject of cider, let me remark that an article published in the same number of the RURAL, on "Racking Wine," is worth to any person who makes a barrel of cider for his own use (unless he knew it before and he probably didn't) more than a year's subscription, for it is as applicable in the main in racking cider as wine. I. D. G. NELSON.

TO MAKE SOFT SOAP WITH POTASH.

To cleanse the grease, put it in weak lye; keep it as hot as possible and not boil it. When all pieces are eaten up, fill the kettle up with cold water; let it stand until cold, when the grease will rise to the top. Take off and prepare to make the soap. Twenty pounds of grease to thirteen pounds of potash are required to make a barrel of soap. Get the best part of the cake and dissolve it; strain the lye into the barrel. (There will be settlings in the best of potash; but keep it out of the barrel by straining the lye.) Melt the grease and strain into the barrel also, and thus avoid the filth so commonly found where one gets near the bottom of the barrel. The last is thus made as clean as the first. With a stick in the barrel stir the lye and grease three or four times a day, thoroughly. It will thicken gradually, and make most beautiful soap. If made in cold weather the barrel should stand in a warm place.

A SUBSCRIBER.

ODDS AND ENDS.

Potato Salad.—I noticed some time ago a request for a recipe for potato salad, I have seen none as good as the following: Boil eight large Irish potatoes; when cold slice them in a flat dish with one or two raw onions, and a sprinkling of celery and salt. Over each layer of potato and onion pour the following dressing: Beat two eggs with a table-spoonful of sweet oil, add a small teaspoonful each of sugar, pepper, mustard and salt; when well mixed pour on two cups full of boiling vinegar; put back on the fire and stir till it is as thick as custard. Let it cool before putting it on the potatoes. Sprinkle a little Cayenne pepper on the top, make this in the dish in which it is to come to table, and, if possible, twenty-four hours before it is to be used.—CONSTANT READER.

Apple Butter.—I use five gallons of molasses, eight gallons of apples, three gallons of pumpkins; boil the apples and pumpkins soft; put them with the molasses in a bright copper kettle; make a brisk fire and stir continually; boil down to ten gallons; spice to taste. Do not let it remain in the kettle when done, or it will taste of the kettle.—A FARMER'S WIFE.

Canned Cream.—Heat sweet cream in a porcelain kettle and add sugar the same as for fruit; can while hot. Do not let it boil. It will make custard or pumpkin pies by adding water, and is very nice for coffee.

How can I keep sour cream for Winter use? AUNTIEVIE.

Bristol Brick Dust and flannel are used to rub rusty steelyards and bring out the figures; also for scouring knives and brass. It is excellent, so a housekeeper says.

Domestic Inquiries.—LIDIE HOWELL asks how to make Autumn leaves into boquets, wreaths, etc. . . . Mrs. R. S. C. asks how to prepare a ceiling for painting that has been finished with a second coat and white-wash once. . . . . Mrs. F. O. BOWEN asks how to make a first-rate article of apple-butter. . . . A subscriber asks for a recipe for coloring maroon. . . . J. E. FINLEY asks for a recipe for dying wool with the extract of madder. . . . J. B. D. asks for a recipe for pickling beef. . . A. MORSE asks for recipes for coloring green, red, yellow, orange and tan on cotton; also madder-red, cochineal, green and dark brown on woolen; also black that will not crock. . . . P. S. asks some of the RURAL'S correspondents to give the process of preparing pickles for market, the cucumbers having been laid down in salt brine during the pickling season.

"GOOD PAY FOR DOING GOOD!"

LIBERAL PREMIUMS TO CLUB AGENTS!

MOORE'S RURAL STILL AHEAD

In Liberality to both Agents and Subscribers!

READ, LEARN AND ACT!

THE RURAL NEW-YORKER'S Agent-Friends, and everybody disposed to become such, all over the Continent, will please note the following announcement of UNPRECEDENTED PREMIUMS for both Club Agents and Subscribers:

Observe, firstly, that we give every Yearly Subscriber who pays $2.50 a Splendid STEEL-PLATE ENGRAVING. This *Grand Premium* is sent to every person paying $2.50 for the RURAL one year—so that each subscriber at that price really gets $7.50 for only $2.50! Note, particularly, that the offer will enable you to raise a Club with much greater ease and facility than ever before.

Note, secondly, the annexed list of VERY LIBERAL PREMIUMS offered those who form Clubs for 1873, or for one year from any date. See the Names and Prices of Articles, and the small number of Subscribers required to secure a Valuable Premium. Almost any one located in a locality where live, reading people reside, can, by a little timely effort, secure a Premium worth from $5 to $200. *Now is the Best Time to Start Clubs*, for now that the Presidential Campaign is over everybody will want such a good, useful and popular paper as MOORE'S RURAL.

Remember, thirdly, that every article we offer as a Premium is *First-Class and Genuine*—that we put each at lowest retail price, and that the names of manufacturers or dealers (given in most cases) is a guarantee of good quality, etc. Note, also, that all Club Subscribers—whether at $2 for the paper only, or $2.50 for Paper and Engraving—can be counted by Agents for Premiums.

The Table below specifies the Cash Price of each article offered as a Premium, and the number of subscribers required to secure it at $2, (our lowest club rate)—or at $2.50 with our Premium Engraving. Note that the Premiums are offered *without any condition as to whether the clubs are composed of new or old subscribers.* Canada subscribers must add 20 cents per yearly copy for postage.

SPECIFIC PREMIUMS,

TERMS, &c. FOR MOORE'S RURAL NEW-YORKER FOR 1873.

OPEN TO EVERYBODY.

	Cash Price of Premium.	No. of Subscribers at $2. or $2.50 with Engraving.

RICH HOLIDAY PRESENTS

FOR OUR AGENTS AND SUBSCRIBERS!

WORK AND WIN!

All Actual and Intending Agents of MOORE'S RURAL who wish to make themselves or their friends Handsome and Useful HOLIDAY PRESENTS should send in Clubs (or parts of large Clubs) soon as possible, and select the Presents from our Premium List on preceding page. Most articles can be sent promptly—by first return Mail or Express. We desire to aid in making a host of people happy during the Holiday Season—so, Agents, please hurry up your Clubs in order to secure Premiums for yourselves, and also copies of "Birth-Day Morning" for all Subscribers who pay $2.50. We are already sending our Chrismas and New Year Gifts. An Indiana Lady to-day (Dec. 9,) sends a Club, selects a pair of Gold Sleeve Buttons (with the initial of a friend) and requests her Premium "by the 20th of Dec., without fail." And it will be forwarded at once—ahead of time.]

RENEW NOW!—All who wish the uninterrupted continuance of the RURAL (as we trust all subscribers do) should renew their subscriptions at once, either by handing their money to the nearest Club Agent or remitting it to us direct. Prompt attention to this request will prevent the delay which often necessarily occurs on and after Jan. 1st. *Renew at Once!*

REPORT OF THE COMMISSIONER OF AGRICULTURE FOR 1872.

WE have received this Report, which is contained in a pamphlet of eight pages. The fact, alone, that it is a report by the chief of a Department of the Government compels attention to its statements, and a review thereof. The Commissioner's single year's experience at the head of the Department convinces him "of its importance as an executive branch of the Government." This is not altogether unnatural; but it would astonish the outside world had he come to a different conclusion; and we doubt not it would have gratified some people who have nursed the reverse conclusion with a good deal of care for many years, and who, we sometimes think, have far too many facts and arguments to sustain their conclusions than is compatible with the interests of American agriculturists. We are not sorry, however, to know that the venerable Commissioner magnifies his office, and is encouraged "to believe that the work we do reaches further and strikes deeper into the interests of mankind than comes within the scope of any other human effort!" For with such an estimate of his work there should be a corresponding sense of responsibility, which should stimulate to works of corresponding value.

The Commissioner proceeds to talk of the work being done by the various Divisions of the Department. We are told that "the Chemical Division is contantly engaged in the investigation of subjects of vital importance to the successful and economical operations of the farm!"

If this is true—and we suppose it is or the Commissioner would not have said so—we would like the Commissioner to point out to us where the Chemist of the Department has ever given to the world any facts not previously known—except, perhaps, the component parts of certain soils in specific localities, the analyses of which were about as useful to the agriculturists of the country as a knowledge of the fact that Pine grows in Maine. Where shall we find the published results of these years of laborious research and experiment by the Department's Chemist? Where are his generalizations calculated to give the farmers and gardeners of the country a better knowledge of the Chemistry of the soils and plants of the United States?

Again, the Commissioner says:—"It is the province of the Botanical Division to give attention to inquiries for information on questions relating to practical and economic Botany." This sounds well; indeed, it is well: but it would greatly gratify us and the country to see the answers to those questions on economic botany. Where does the Department Botanist shed his light? Not in the reports of the Department of Agriculture, surely; nor in the reports of the various expeditions fitted out at Government expense, such as the Mexican Boundary Survey, Pacific Railroad Surveys, and others of similar importance; for if we look over the names found there, we find those of Dr. JOHN TORREY, Prof. ASA GRAY, Prof. GEO. THURBER, Dr. GEORGE ENGLEMAN; and we are led to believe they are the men who have performed the great work of arranging, classifying and describing the plants collected. Whenever the Department Botanist shall publish, for the benefit of the public, a report of his labors, as the botanists of the European Governments do and always have done, then we will have some evidence that he is doing some work for the people in return for the salary they pay him; also, an opportunity to judge whether he is worthy the position he occupies, or otherwise.

The fact is, there is scarcely an agricultural or horticultural paper published which does not give the public, in one year, more useful botanical information than can be found in the Department reports since its organization. Let it be understood that we are not charging the present Botanist—nor his predecessor either—with indolence: for it is quite likely he performs the duties assigned him; but we assert that the public, outside of Washington, receives inadequate return, in the shape of practical and scientific information, for the money expended in the Botanical Division. Who is to blame? We do not pretend to answer that question; but some one is.

Concerning the Division of Entomology, we are informed by the Commissioner that it is its province "to point out such insects as are injurious, their depredations, their habits, how they may be known by their works, and, in some measure, suggest remedies for the evils of which they are the cause." The Commissioner seems to have acquired a splendid conception of the "province of this division!" But if such is its "province" why has it never been done? Or, is it? Let those interested in the Department's work look over the Reports of the Department for any year or all the years since it had an Entomologist, and compare the work of that officer, as there recorded, with the published reports of the lamented WALSH of Illinois, or those of CHAS. V. RILEY of Missouri, or Dr. ASA FITCH of New York, or Dr. WILLIAM LE BARON of Illinois, or with the works of those men who labor in the same field, receiving no other reward than honor and the consciousness of contributing to the enlightenment and benefit of mankind. The labors of such men as LECONTE, HORN, CRESSON, EDWARDS, GROTE, NORTON, SHIMER, HALDEMAN, HARRIS, SAY, MORRIS, MELSHEIMER, and many other noted entomologists who might be named, have elevated the science of entomology to its present position in this country without the aid of Government patronage. But what has the Department done? The labors of its Entomologist have been buried in a nutshell in Washington, if indeed he has performed any of practical value to agriculturists. Outside of that city few have received any information corresponding to the importance and responsibility of the position of Department Entomologist; nor are they likely to until the people consent to pay for the publication of the great work which has engrossed his attention so many years while he has been nominally serving the public. The hundreds of thousands of insects discovered and collected by expeditions fitted out at the expense of the people, have not only been described by private entomologists, but have gone to enrich private collections in this and other countries.

Although we have occupied much space with this review of the Commissioner's Report, we cannot close without noticing what he says about the Horticultural Division and its province, which is:—"To select the best fruits and improve them by hybridization; to note the peculiarities of varieties and their climatic adaptations, is a part of the work of this Division." Well! Will the Commissioner inform the pomologists of the country where the fruits are that have been improved by "hybridization?"—even if this is only "a part of the work of this Division." Did the Department, in its whole history, ever produce a "hybrid" fruit? Did it ever attempt it? If it would not be deemed impertinent we should ask if the Commissioner actually knows what hybridization means; but we will not. But we shall look with anxious interest, now that the Commissioner has himself defined a part of the duties of this Division of the Department, for some substantial evidence that he comprehends them and that his subordinates are discharging them!

The Microscopic Division, we are assured, is "growing in importance." We shall be glad if that Division adds any information on the nature of "rust, smut, mildew and mold," to that contained in M. C. COOKE'S work on that subject. When it does, we shall be glad to credit it therewith.

Concerning the Seed Division, we have heretofore expressed our opinion. We regard it, as managed, a practical swindle upon the mass of taxpayers, and wholly unnecessary, although the Commissioner declares that "there is no part of the work of the Department so unqualifiedly approved, and none which works so large a benefit to public interests." If there is none which "works so large a benefit to public interests" as this Seed Division, then the sooner the Department of Agriculture is wiped out of existence the better. But our space fails us, and we forbear further comment.

RURAL NOTES AND QUERIES

Death of Rev. J. Knox.—We learn with surprise and regret of the death of this genial gentleman and horticulturist, at Pittsburgh, Pa., Nov. 13, of apoplexy. He for many years wore, as he deserved to wear it, the distinguishing title of "The Strawberry King;" for he was among the first, if not the first, to practically demonstrate the great profit of the systematic and thorough culture of this fruit. No man previous to him had succeeded in inducing people to pay large prices for strawberries, continuously through the season, regardless of the supply. He did more than any other man to establish the reputation of the Triomphe de Gand as a profitable market fruit; and the Jucunda, from the Knox farm, found no rival in the market. He was a man of great energy and system, far-seeing and persevering until he accomplished his purpose. At the meetings of horticultural societies he rarely spoke unless called upon; then he had no theories to promulgate, but confined his statements to his own experiences—to what he had done and how he did it. He made no secret of his methods, and both by precept and example taught the people the profit resulting from doing whatever is undertaken in the best possible manner.

—We shall miss his genial, beaming face, his cordial greeting and cheery voice from horticultural gatherings sadly. We shall miss those quiet social talks on horticulture in which he indulged with his friends, giving them the detail of his work, where he had only opportunity to give the public the outline. JEREMIAH KNOX was a man whom to know was to love, and who was best loved by those who knew him best.

A Surreptitious Swindle.—An Agent of the RURAL NEW-YORKER, located in a Western New York town, wherein it has over fifty subscribers, writes us in this curt yet comprehensive style:

"Each of your subscribers received this day a letter, of which the inclosed is a copy. Don't sell them another list unless you get a good price, for your subscribers in this town are *good* Church people, and they may get indignant should they receive such circulars often."

The inclosure alluded to is the circular of a swindler—one of those generous geniuses who propose to furnish counterfeit greenbacks for a trifling amount of the genuine article. Of course none but knaves or fools will bite at such flimsy bait, as we have said aforetime, and we trust the RURAL hasn't a corporal's guard of such ninnies among its tens of thousands of readers. But as to selling our list. We beg to assure the writer of the above, and all others interested, that we have never sold the RURAL'S subscription list to any party. If swindlers have got possession of it, the "operation" has been a surreptitious one. It is possible, though not probable, that swindlers have in some manner obtained a copy of our list;—but if so we will give $500 for the arrest and conviction of the party or parties who perpetrated the larceny. Our lists are kept under lock and key by night, and carefully guarded at other times—yet a copy of our mail list was stolen (by a former employe) some two years ago, though soon recovered—and it is possible that such a thing may have occured (less the detection and recovery) again. But no copy has ever been sold, and never will be to swindlers while the RURAL NEW-YORKER is under its present management.

Merry Christmas!—We need not say that we wish it to every reader! But we do! And we hope no new fangled notions will put our readers in any such a dilemma as SANTA CLAUS seems be in on the opposite page, with reference to making Christmas a merry one. To us Christmas comes as the flood-tide of the year, so far as our labor is concerned; and we have only time to look up from our work as we receive pleasant greetings from our subscribers in the shape of merry money remembrances and cordial, encouraging words, and say in response: "Thank you, Sir, or Madame! We wish you the same!"

American Short-Horn Herd Book, Vol. XII.—Hon. LEWIS F. ALLEN, editor of this book, informs us that it is necessary all the pedigrees intended for record in the above volume be sent to him previous to January 1, 1873, that the book may be compiled so as to be published early in the ensuing Spring. Write the names plainly and give the sex of every pedigree. One dollar is the charge for recording every animal, which must be remitted with the pedigree.]

Rural Recruiters Reporting.—Hundreds and probably thousands of its subscribers have recently volunteered to become Agents (Recruiters) for the RURAL, and many of them have already reported progress in obtaining recruits—new subscribers. One of our high privates, writing under date of "Camp Niles, Dec. 9, 1872," addresses us in this manner:

COMMANDER MOORE:—I am a private in the great "RURAL Brigade," on detached service here in Berrien Co., Mich., and send you this my annual report. I have served faithfully through the past year, and am now looking forward to promotion. I think I can serve as a Recruiting Officer, and want you to send me the proper commission (documents) for that purpose, including that exquisite representation of camp life called "*Birth-Day Morning.*" I am commencing to "write for the papers," and as I think the RURAL is the best of them all, I send you the first "article." It is on financial affairs, and I feel sure will be "accepted" if it is not "published," and though it is really worth $250 to any man who can "use" it, it only calls for a copy of the RURAL for next year, and the already-mentioned "*Birth-day Morning.*" Now, please continue sending your "orders" (papers) until the close of 1873, and forward my "commission" at your earliest convenience, and I remain Yours Very Truly, JOHN H. ROGERS.

Of course Private ROGERS was at once promoted and furnished with the proper commission, (documents) for recruiting,)—as will be all like applicants, by letter, or in person, at these headquarters. Push on the column! *Next!*

The Pennsylvania Agricultural College, according to a lady correspondent who has explored it, and written of what she saw and experienced, to the Germantown Telegraph, is chiefly remarkable for its cheerless, c[illegible] and filthy halls and dormitories, and the n[illegible] condition of its surrounding grounds. The[illegible] dents seem to be well fed, but the picture given of the institution otherwise, if true, is disgraceful to the great State of Pennsylvania. We notice this report reluctantly, especially since le concerns a sister State; but we do it in behalf of the boys and girls of farmers who, in their efforts to obtain education, deserve decent treatment, and to be taught the decencies of life at least.

To Advertisers.—In order to accommodate as many of our advertising friends as possible, without infringing upon reading departments, we have concluded to issue a neat tinted cover with the first number of next year's RURAL, (Jan. 4, 1873,) mainly for advertisements. The number will close for the press Dec. 25, and we purpose publishing 150,000 copies. Those who wish to advertise in it will please make their announcements brief, as a large proportion of the space is already engaged.

Salmon Trout Spawn.—SETH GREEN, Rochester, N. Y., informs us that any one wishing to experiment in hatching Salmon Trout Spawn, will be sent a few hundred, if ordered during December, by sending 50 cents to pay for the package.

PUBLISHER'S NOTICES.

TO EVERY READER!

Readers will Please Note that next week's RURAL closes the year, when most subscriptions expire,—and also that a prompt renewal is necessary to secure its uninterrupted visits. Moreover, remember that the RURAL is not a re-print of a daily or other journal, but that its reading matter, illustrations, etc., are prepared, at great expense, expressly for its readers. Furthermore, "don't forget to remember" that in addition to furnishing the best paper of its class, we give the best premium, as every subscriber paying $2.50 receives a post-paid copy of "Birth-Day Morning," a Superb Steel Engraving—ready for framing, without extra charge.

Read Our Premium List, on preceding page, and then try for a slice of the "*Good Pay for Doing Good.*"

Send for the Documents!—Our new Show-Bill, Supplement, Prospectus, &c., are *now ready* and will be sent *free and post-paid* to all applicants disposed to form clubs. Send for and use the documents!

The Premium Picture is sent to All who pay $2.50 for a copy of the RURAL one year, and *not to those who only pay the club rate.* Club subscribers can secure the Engraving, however, by adding 50 cts. to the usual club price ($2.) Don't forget this.

BUSINESS NOTICES.

May learn something greatly to their advantage and obtain specimens and full particulars free, by addressing WOOD'S LITERARY AND ART AGENCY, Newburgh, N. Y.

HORSE EPIDEMIC.

A PHYSICIAN in a communication to a Buffalo paper about the Horse Epidemic, says:—"Externally I used and would recommend Dr. Trask's Magnetic Ointment to the throat, around the ears and on the forehead. This ointment contains tobacco and lobelia, and operates upon the mucous glands of the head and throat by causing an increased flow of secretion from them, at the same time by its relaxing effect removing the stricture and giving almost instant relief to the cough and breathing." It is kept by all Druggists.

Social Topics.

ATTRACTIVE HOMES.

BY EBEN E. REXFORD.

"It's strange," says Neighbor A. to me one day, "how different times are from what they used to be when I was young. Now, there's my boys—out every night in the week, almost, and I can't keep them at home. Neighbor B.'s boys don't trouble him so, and yet they are no better than my boys, as far as disposition and obedience is considered. Somehow they don't seem to want to go as my boys do. I can't account for it."

"Perhaps the reason lies just here," I answered:—"Neighbor B. strives to make his home a more attractive place than the streets or the bar-rooms can be to his sons. And, if he carries out this idea and succeeds in making his home attractive beyond the lure and glitter of our many popular but demoralizing resorts frequented by young men, he is successful in laying the foundation of their future on a strong, reliable basis."

"Yes," answers Neighbor A., thoughtfully; "but how does he do it?"

"Go to his house and see," I answer. "You will find books and music and pictures combining their influences to make it so pleasant and delightful. In the company of all these ministers to the enjoyment of the mind, his boys forget all about the false excitement of the saloon, and are happy in the pure atmosphere of home."

"Yes, I know," again answers Neighbor A, a little dubiously, perhaps. "But when I was young we didn't have even a newspaper, and only half a dozen such books as 'Baxter's Saints' Rest' and the 'Book of Martyrs.' Music we didn't know much about; and pictures were for the rich and not for us. And *I* never cared about runing around much; no more did the other boys of the neighborhood. Now we have a newspaper every week and quite a number of books, and yet the boys ain't satisfied to stay at home. They won't read the news, so what would be the use of getting books?"

"Yes, I know how it used to be," I answer. "But in the days of your boyhood," I say to my friend, "there was not one-tenth part of the attraction abroad that there is at the present day. To counteract this alluring evil the increase of attraction at home must be made greater in the same proportion. When you were young, because there were few if any places more attractive than home, you did not care to run about. Now it is entirely different, and you, who never felt this great temptation to frequent places where mirth and jollity and carousing reign, most likely under the higher sway of liquor, cannot realize how strong the influence is that draws our young men thither. If home lacks attractions for them of the purer, higher kind, which every nature endowed with yearnings after the pleasant things of life demands, they will seek those of a lower order, where the more sensual parts of their mind can find satiety, for a season at least. Constant resource to this low society for amusement will destroy, in time, their taste for anything higher and better. You should get such books as your boys would get interested in from their own knowledge of the things treated of. Newspapers are, to young people, very dull reading. But give them a book or a magazine that tells them about something they have known, or seen, or heard of, and their interest is awakened at once. They read on, and, before they know it, they have formed a taste for reading that is not easily got rid of. Give them music, and not only will the hours be shortened and made tenfold more enjoyable and pleasant, but the influence it exerts will be softening, refining and elevating. You cannot value books or music too highly; and if you add pictures, you will make home a more pleasant place than any bar-room can ever become. The first *is home*, and the bar-room is not and can never be. In these days you can get, for a small sum of money, as good pictures as you need, and pictures that will brighten up your home wonderfully. They will be constant teachers to your children—companions of an elevating and ennobling influence. Get some landscapes in chromo-lithography, which gives you as beautiful a picture in oil for a few dollars as could not have been purchased a few years ago for a hundred, and hang them where the boys and girls can feel their beauty reflecting itself into their lives. These will brighten up shadowy nooks for the younger ones as nothing else could do. Get some of these things, Neighbor A., and then tell me if books and music and pictures do not have a combined influence that will make itself a power for good over your children and—excuse me—yourself. You will get to wonder, in a little time, how you got along so long without them. If they were in every home, the saloons would languish for want of customers, and the purer and nobler part of every nature would find such development as would in time crush out all desire and taste for the evil excitements of the street-school for the demoralization of young men. Try them."

"I believe I will," answers Neighbor A., and goes away thoughtfully.

I shall look for a reformation in his family, himself included.

SOCIAL CLUBS FOR GENTLEMEN.

The increasing evil of dissipation among men of education and influence in our villages and towns, is the impetus which prompts this article; and if some of my readers, who cannot fail to see themselves reflected, will take warning and, ere it be too late, turn from the error of their ways, the object of the writer will have been accomplished.

Whether these social clubs for gentlemen are regularly organized with due form and ceremony, or whether the members thereof meet, as if by intention, at some wretched saloon and there carry on the villainous practices of like associations, they should be vetoed.

A few years ago I should have been horrified had I been told who frequented these vile dens of infamy; but the sad truth has gradually dawned upon my mind, and I am now fully aroused to the enormity of sin carried on about me. It is to my unspeakable grief that I learn that merchants, politicians and other influential men of our villages are in the habit of spending their evenings—their nights, I might say—in these wretched places. No wonder that business is dull and the interests of the town languish; how can it be otherwise when our best men are transforming themselves into gamblers and drunkards!

No wonder that wives receive that inevitable answer, "Times are hard," whenever they ask for the funds necessary to keep the family machinery moving! Where is the remedy so long as there is such a perilous leak in the husband's pocket?

The men who frequent these places are not only husbands but fathers, and, as such, degrade not only themselves but their children. What must be the feelings of a father to see his son take a seat beside him at the gaming table! Yet why shouldn't he do so? He surely has justification in his father's example. The son, however, prefers his own club, and the father reproves him for late hours; but, like "Satan rebuking sin," pursues his own course.

I care not how well a man provides for his family in the way of food and clothing; if he comes home only to eat and sleep—if he takes no interest in the hopes and aims of his children—he is absolutely cruel. Where can a man find a more improving social club than his own family? If he is fond of games, he can enjoy them at home without that eternal leakage from his pockets. Oh, men! I entreat you to break this terrible habit, and go home to your wives and children; you will yourselves be better, your families happier, and your prospects brighter than before. Men of intellect and education do not dim the lustre of your brains by practices which you, in the depths of your soul, condemn. CLARA JULIEN.

A BROWN CHRISTMAS STUDY.

SANTA CLAUS—"Now, how am I going to get down these new fashioned chimneys?"

LIFE AT HOME.

It is practicable to make home so delightful that children shall have no disposition to wander from it or prefer any other place; it is possible to make it so attractive that it shall not only firmly hold its own loved ones, but shall draw others into its cheerful circle. Let the house, all day long, be the scene of pleasant looks, pleasant words, kind and affectionate acts; let the table be the happy meeting-place of a merry group, and not a dull board, where a silent, if not sullen, company of animals come to feed; let the meal be the time when a cheerful laugh is heard and good things are said; let the sitting room, at evening, be the place where a smiling company settle themselves to books or games till the round of good-night kisses are in order; let there be some music in the household, music not kept like silks and satins to show to company, but music in which father and mother and sister and brother join; let the young companions be welcomed, and made for the time a part of the group, so that daughters shall not deem it necessary to seek the obscurity of back parlors with intimate friends, or to drive father and mother to distant apartments; in a word, let the home be surrounded by an air of cozy and cheerful good-will; then children need not be exhorted to love it—you will not be able to tempt them away from it.—DR. AIKMAN.

NEVER pay for a tradesman's bill until you have reckoned it up.

ALLOW a man to have wit and he will allow you to have judgment.

A MAN who is officious to serve you at first sight should be regarded with caution.

WHEN religion is made a science there is nothing more difficult; when made a duty there is nothing more easy.

A "RURAL" POEM.

THE following Poem, as appears from its date, was first published in the RURAL NEW-YORKER of Dec. 23, 1854—nearly eighteen years ago—and is now reproduced in the belief that many, if not all, of its points are as appropriate and truthful to-day as when it originally appeared. It is in honor of the RURAL, the Pioneer RURAL, and at the time of its publication was widely copied and commended by our exchanges. Now that MOORE'S RURAL has passed its majority, and become a recognized (if not chartered) institution of the land, we trust there is no impropriety in re-publishing this poem in its praise:

THE RURAL.

BY AZILE.

When wintry winds are sweeping by
And Farmers round the ingle lie,
What paper most delights the eye
And dissipates dull ennui?
The RURAL.

When Nature has withdrawn her smile,
And tears usurped its place awhile,
From whence the solace free from guile
That soon the heart doth reconcile?
The RURAL.

When merry Holidays are here—
That joyous season of the year,
Of pastimes, sports and hearty cheer—
What adds its mite for readers dear?
The RURAL.

When jests and riddles pass around,
And young and old with mirth abound,
Where can amusements rare be found,
What page Enigmas dark expound?
The RURAL.

When clouded o'er the brow with care,
And gloomy shadows hover there,
What soothes and softens dark despair
And brightens home with cheerful air?
The RURAL.

What speaks alike to grave and gay,
In sober prose and merry lay—
Warns Youth from Virtue ne'er to stray,
But ever walk in Wisdom's way?
The RURAL.

What seeks to counsel all aright,
Gives Truth and Justice special might,
Applauds and honors schemes upright,
But o'er deception casts a blight?
The RURAL.

When Spring returns with vernal showers,
And maidens sigh for vine-clad bowers,
What whispers then, "Improve life's hours,
And learn to cultivate sweet flowers?"
The RURAL.

When seed-time comes, with busy round
Of sowing grain and tilling ground,
What gives advice with logic sound,
And tells of implements renowned?
The RURAL.

What has for all its chosen theme,
Domestic peace and lover's dream,
Makes Matron's duties lightsome seem,
Contentment o'er the hearth-stone beam?
The RURAL.

Long may the "Model Paper" reign!
Its noble standard e'er maintain—
Successful be its new campaign,
And may all friends of Worth sustain
The RURAL.

Rochester, Dec., 1851.

MATRIMONIAL INCOMPATIBILITY.

THE Rev. Dr. PEABODY, in a late essay touches upon this delicate subject after the following fashion: The truth is that the greater proportion of the so-called incompatibilities and uncongenialities of domestic life which are so often made the ground for the disruption of the matrimonial bond, are inadmissible as a justifying ground for any such dissolution, and could be readily overcome and blotted out of existence if the parties most concerned had only the will to do it. A couple are no sooner married than they find that differences of opinion and mutual jars ensue, and all is not gold that glistened; and then one or both straightway imagine that there is no remedy but in ruthlessly breaking the solemn, sacred tie that binds them. A vague, restless feeling seizes upon one or both, producing discontent, engendering a certain thought of present bondage which exists only in fancy, and creating a feverish desire for other associations and spheres which are supposed to be more fitted and providentially designed for the mind and heart. No escape, it is said, but in cutting the knot. It is a delusion. The marriage relation, in all its history, was never expected, perhaps, to be entirely free from misunderstanding and discords. Foolish to think that the whole mutual life can flow and, like the early stream, without a ripple or eddy. Home is a school, a discipline, whereby husband and wife are to grow into each other, getting rid of their angularities, harmonizing their peculiar characteristics, and more and more becoming one in thought, sympathy and life. The true blessedness of wedded souls is not insured by a simple exchange of plighted faith. It comes through and after many a self-denial, many a crucifixion of the will, many a scourging of the resentment, anger, pride, vanity, and passions of the heart. It is true here, as in other relations, that he who saveth his life shall lose it, and he that loseth his life shall save it.

TAKE a receipt though you pay ready money.

Our Story-Teller.

"A MAN AND BROTHER;"

Or, Aunt Hetty's Christmas Feast.

BY MAY WHITNEY HALL.

ONCE upon a time, and very near a Christmas time, a little ragged beggar rattled at a certain area gate on the apex of Snob's Hill. Now KATE, the cook, was like a certain dog we know: her bark would make each separate hair stand up "like quills upon the fretful porcupine," albeit her bite was a tender and touching thing to experience. With characteristic ferocity she flung up the sash:

"Phat wud yez be afther wantin', ye dirthy, ragged, shnivellin, lazy sphalpeen! Lave go the gate, will yez, an git out o' the yar-rud or I'll send for a polaceman an' have yez arrusthed for a varant that yez are!"

"O, if you please, Miss, I only want to see Aunt HETTY, and Papa said I was to go right up to her room!" pleaded the little creature piteously.

"Worra! worra! Did iver yez hear the likes o' that!" ejaculated KATE. "Look at the rags iv her, an' the tags iv her, and nary a shoe to the feet iv her, an' her face as purple as me ould flannel pettycoat, and thin as the sowl iv me ould slipper, an' hear her askin' to go up to me lady's chamber as grand as any goosey-gander iv the lot! An' is it one iv me lady's Poor-House folk yez be? I faith, an' it's like the grattytude iv yez to come a rattlin' away like a fharty-horse power oonflygrashun, a tryin' to wake her out in the first wink o' shlape she's had this fhartnight, a shlavin' fur the lolkes iv yez. Faith its not mesilf ud wake her for yez if the ghoust iv Bloody MARY stood at the door. It's nothin' yez'll get by hangin' round this house, for ivery blissed sowl in it—barrin' Aunt HETTY—is out iv it, a dyin' all the delicacies iv the sason for the big Christmas Fhasto to-morry! If its hungry yez be its yersilf that's savin' yer appetite fur that same Fhastegan' its my advice that ye lave off shnivellin an' take yersilf out iv the yarrud afore the polaceman comes," accompanying her advice with a penny or two, which the child picked up with a mournful "Thanks!" which sounded as if her little beggar's heart were breaking with some beggar's woe.

As she reached the pavement two handsome, well-dressed ladies stepped from their carriage, ran up the steps, and disappeared within the aristocratic Snob's Hill mansion. The vagrant, seized by some unaccountable impulse, ran after them so quickly that she suddenly found herself within my ladies' chamber, all breathless and speechless, and unable for the moment to explain her presence to the astonished pair. When she found her tongue at last it was to relate the usual beggar's tale.

Her papa had once been very rich, and lived in a beautiful home "just like this, ma'am, for he told me so one night when we were passing; and he leaned against the area gate, and cried so hard! and said:—'My little girl, when I'm dead and out of the way, it may be they'll let you come here and live!' (Mercy! what audacity!) And he took sick that very night, and now our money is all gone, there's no fire, and poor papa hasn't tasted a mouthful in two long days; and his poor dear feet are cold as ice, and he can't speak any more only to whisper 'HETTY! HETTY! Won't some one call my HETTY!' And O, dear, good ladies, won't some of you come and do something to make poor papa better? I'm sure if my papa lived in a big house like this now he would help you if you were sick and cold and hungry, and so near Christmas, too, and everybody else is happy!"

Well—the story was told with real pathos, but only ROSA, the pretty chamber maid, had stayed to listen to it! It was Christmas Eve, and to-morrow the "prodigal son" of the household was expected home, as he had been expected, O, how vainly, for many a long year; and both the ladies were so busily employed in killing the "fatted calf" against his coming that neither had a moment's time to waste on vagrants.

O, if "Aunt HETTY" had not been so soundly sleeping, dreaming of the happy days when ROB, the baby, made his first appearance on the family stage. Again "big sister HETTY" carried the rosy cherub in her arms, rocked him asleep and worshiped him awake. She saw him unfold once more like a lovely flower, all grace and dew and sweetness, and then she saw with unspeakable anguish how easily a breath of sin blasted his beauty. Once more she re-lived those terrible hours when ROBERT, her idol, was proven to be veriest clay. Again she saw him erring, falling, falling deeper and deeper into the abyss of sin, day by day. Once more she saw her talented, beautiful boy arrested for a heinous crime, committed under the bestializing influence of wine, and heard his cry of "Lost! lost! forever lost!" Then she awoke and remembered that it was on a Christmas Eve he went away, and again her presentiment returned, that Christmas the tender, merciful, forgiving, reconciling time, would restore him to her arms. And so, praying and hoping, she falls asleep again, and in a blissful dream saw the wretched outcast transformed to a shining saint.

As for "my ladies" they were busily engaged in putting on the "final touches," hanging gifts upon the wonderful Christmas tree; adjusting the curtains so that only the artistic ray of sunlight be allowed to enter. They overlooked the dinner preparations, and dressed the children in holiday attire, all the while chatting of the expected guest. Ah! would he come at last, the poor, unhappy wanderer? *He* would have a story to relate would harrow up their souls! If they had tears to shed they would reserve them for *his* woes! for, despite the disgraceful stain he had left upon the hitherto immaculate DUDLEY escutcheon, he was well beloved in that DUDLEY mansion; and while they sat in hopeful expectation of his happy return, the poor, pale-faced little pleader went sadly away to her garret without so much as a kind word from them to relieve "poor papa's" woes!

Old KATIE, alone, kept the child in remembrance. "Bother the face iv her!" she said, gossiping over her tea with ROSA. "I'm blissed if she didn't look the picter iv mastor ROBERT at tin! And thin, the name iv her! HITTY—jist as ROBERT used to call Miss MEHITABLE! and did she say it was her faythor sint her? and would she be afther wantin' to live with me leddies? faith an' its Miss HETTY ought to know, an' its mesilf ought to uv called her to sphake wid the child if the ghoust iv Bloody MARY had stood at the door! If the brat proves to be ROBERT'S gerrul, and he a shtarvin wid could this Christmas Eve, one of thim as is makin' so merry above our hids 'll niver see sunshine again."

"Perhaps she'll go to 'Aunt HETTY'S Christmas Feast," suggested ROSA. "I gave her a ticket, and I've got her address on a slip of paper in my pocket."

"Ooh! the darlint! May the Howly Virgin bliss yez fur that! I'll bestir myself in the mornin' an' see if I can find the place; an' if iver I sit my eyes on that child agin it's mesilf 'll know who's faythor iv her, and mayhap bring him home to thim as love him like their own hearts' blood!"

Now, Aunt HETTY was an old maid, as you must know; and although she was rather "down" on children, as a class, once or twice a year she liked to gather a perfect swarm of little ones about her to "satisfy the maternity within by the lump," as she used to say, "and have it done with." About the time that ROBERT'S exile was over, and when they became convinced he would not of his own accord come home, Aunt HETTY bought a house—not a handsome or grand house, not in a "first-class location" by any means; for into such a house she could never have gathered the children she wished to find, but it was a house where "the poor, the maimed, the lame, and the blind," could find shelter and sustenance. In fact it was a haven into which she hoped poor BOB and his wretched family might drift some day and be restored to her arms.

In this house of HETTY'S was an immense room with long tables running through it, and here was yearly spread her Christmas feast, to which came swarming a myriad of hungry children—some pretty large children among them to be sure, but "of such" even the full grown ones "are the kingdom of Heaven."

It was a strange assemblage which gathered yearly in that room. There were children from the dens of filth where soap and water and whole clothing were unknown; from the hiding places of sin where no ray of GOD'S light ever seemed to come; from streets and sheds, from the bitter cold of that Winter's day they flocked in, crowding the room, the passages, the door-step and the pavement, clamoring for bread. Such hideous, hungry faces, such bleared eyes, prematurely wrinkled cheeks, sin-distorted mouths and brutal, vicious chins; such dirty, naked breasts, scarred here and there in the last street fight; such scrawny hands and pinched, dilapidated figures; such pitiful, timid, anxious faces here and there; such wicked, blasphemous ones; such vacant, idiotic ones; such apologies for and burlesques of humanity I never saw congregated anywhere, except at Aunt HETTY'S Christmas feasts; and, thank GOD, that I do see them there! For not only were they gathered to a feast of the fat things of earth, but, after the clamorous body was satisfied, she always had some sweet and soothing hymn or ballad sung; and after, when their minds and hearts were somewhat diverted from their wretched selves, she had some quiet talk about the Man of Sorrows who had nowhere to lay His blessed head, who all His life dwelt among the poor and lowly, and knew their every want; and she tried to make them feel that her Christmas feast was but a dry crust compared with the banquet of love He had in preparation for them, if they would but come to it. And we have great reason to hope that many have already gone in to partake of that feast through the precious ministry of those days.

Every year the old visitors who remained came and brought new guests; and this special feast was crowded, all hungry and expectant. The viands smoked upon the table, chairs, benches and standing places, all were full; and so was HETTY'S heart.

"All these creatures children of GOD?" she asked herself; "these dirty, deformed, wicked wretches, some of them young, O very young, in years but fearfully old in sin—all His? All brothers and sisters to those who live virtuously and fare sumptuously every day? No—no! it cannot be! Else the more fortunate children of the same parent would be more tender toward the suffering, cramped and crippled ones."

"'Feed my lambs!' said He; surely these are not of His flock? Yet His words, 'If a man have an hundred sheep and one of them be gone astray, doth he not leave the ninety and nine, goeth into the mountains and seeketh that which is gone astray? And if so be that he find it, verily I say unto you he rejoiceth more of that sheep than of the ninety and nine which went not astray!'

"These be all gone astray; who goeth up into the mountains of their despair, that rise to the very heavens, to find the wanderers? Alas! not many, in the body, climb those rugged hights; but we know not what ministering angels touch their souls with home-sickness, longings for the safe fold and the dear shepherd's voice, for 'their angels do alway behold the face of my Father which is in Heaven.'"

"And whoso shall offend one of these little ones, it were better for him that a millstone were hanged about his neck and he were drowned in the depth of the sea!" was whispered in old KATIE'S ear by Conscience, as she looked upon this company of "wandering lambs." There came up before her a vision of that delicate child who might be ROBERT'S girl; and the Rebuking Hand hung a great weight upon her because she had delayed her search so long. As soon as possible she slipped away to begin it, coming back presently as pallid as if she had seen her favorite "ghost iv Bloody MARY."

Feasting finished, Aunt HETTY'S children were listening to her accustomed words; and, clustered about her were all the DUDLEY aunts, uncles, cousins who "had come round to HETTY'S poorhouse to see how she managed the thing. When KATE entered, Aunt HETTY was standing meekly at the foot of the table reading to them CHRIST'S beautiful words:

"Blessed be ye poor; for yours is the kingdom of GOD!

"Blessed be ye that hunger now; for ye shall be filled. Blessed be ye that weep now; for ye shall laugh.

"But woe unto you that are full; for ye shall hunger. Woe unto you that laugh now; for ye shall mourn and weep."

Then Aunt HETTY forgot self, time, place, everything but this wonderful love of CHRIST for His suffering poor, His mercy and continued long suffering; the crowd of starving souls before her unrefreshed by His presence, unconsoled by His tenderness; and the words poured from her heart

> "As showers from the clouds of Summer
> Or tears from the eyelids start."

When she had finished, many upturned, wondering faces were wet with tears, many anxious ones were full of a glorious hope, and a few sin-wrinkled ones were smoothed into smiles of pure resolve and noble joy; and all, I trust, were touched deep down where no eye of man could pierce.

But ROBERT did not come. As, one by one, her "children" gave her "good-by," "GOD bless you," and the like grateful greetings, she scrutinized, with intense, eager expectation, each face; but no remembered lineaments were there.

"He will not come!" she sighed, when the last guest had departed.

"If ye pluze, ma'am, I'll take ye to him!" broke in KATE, unable to find an easier way of telling her story.

Filled with astonishment and incredibility, they all followed her down the dreary street, where the bleak wind shifted to earth its burden of snow; up the creaking stairs of the house our little beggar had mentioned; into the desolate garret where he lay, "poor papa," on a few wisps of straw scattered over the bare floor, little HETTY'S ragged bit of shawl spread over him, her frail arms clasping him tenderly, her fair, golden hair mingled with his black, matted curls, her baby face, pure and white as the snow drifting in through the paneless window, pressed to his wrinkled, emaciated, no less pallid cheek. There were tears on that cheek—her tears—frozen drops more precious in the sight of GOD than your diamonds to *you*, madame! There lay the pennies KATE had given—flung away because of no avail! Dead in that lonely room she found him—dead, and she could call back no warmth to the stiff fingers, or sight to the glassy eyes, or smile to the shrivelled lips with paltry money or precious kiss!

Dead since yesterday, both of them—ROBERT and HETTY!—frozen stiff in that agonizing last embrace, and *we* decking our Christmas tree the while and preparing our costly gifts and dinners. GOD forgive us! Not a hand, of all the happy millions in the great city, to come and close those staring eyes! Not an arm to lift them from the floor, and prepare them for the grave. Not a grave to receive their deserted bodies; no coffin, no mourners—nothing! Nothing but GOD'S merciful love for them; and for us—the millstones hanged about our necks and the everlasting moan of the sea of Regret which surges over us!

Looking upon those dead faces, we, one and all, vowed deeply and truly that GOD'S little ones should never again ask from us bread and receive a stone; but that with open arms and purses we would receive and succor them in His name, and for dear ROBERT'S sake. And so—one and all—we are working and waiting for the next great Feast. Some of us will undoubtedly have it in this same house of HETTY'S, but many will be sitting there inside those mansions "not made with hands, eternal in the heavens." GOD grant that none of them go upward to it through the portal of starvation, whose gates *we* may unwittingly have left ajar!

WILSON, the celebrated vocalist, was upset one day in his carriage, near Edinburgh. A Scotch paper, after recording the accident, said, "We are happy to state that he was able to appear the following evening in three pieces!"

Sabbath Reading.

OLD AGE.

BY KATE CAMERON.

LIFE'S westward path is fair and calm,
As sweet and holy as a psalm:
And at its close,—the victor's palm!

The long day's march is well nigh run,
Life's battle quickly will be won,
The sunset brings GOD'S own "Well Done."

Were we to choose on Time's broad page
The best and dearest heritage,
'Twould be the portion of Old Age.

For when the evening shadows fall,
And wrap things earthly like a pall,
We listen for the Master's call.

Oh! better than the morning beams,
And purer than youth's ardent dreams,
This hour,—so full of Heaven's gleams.

Within our reach the longed-for prize:
'Tis but on earth to close our eyes,
And open them in Paradise!

PARAGRAPHS FROM SERMONS.

THE man of true faith feels that the command, "Fret not thyself," and others like it, are as binding upon us as any other commands which are admitted to be of the most solemn and imperative nature. Immense is the error and the evil which have arisen from man's attempting to make distinctions where they ought not to be made. The sin of an unquiet or fretful spirit is not the same, it is true, with other sins, but the obligation which attends the command not to indulge in such a sin is the same. No man can knowingly violate such an obligation, although it relates to a matter which the world is apt to designate as of small consequence, without showing that his heart is not right with God. Wherever God's command is, no matter how small the thing is to which the command relates, obedience must follow.

WE ought not to forget that an affectionate, confiding, tender faith, habitually exercised, would save us half the annoyances of life, for it would lift us up above the reach of them. If an eagle were to fly low along the ground, every man might aim a dart at it, but when it soars into the clouds, it is above every arrow's reach. And they that trust in God "shall mount up with wings as eagles; they shall run and not be weary; and they shall walk and not faint."

RELIGIOUS faith involves *living by the moment*; that is to say, of giving to the present moment the whole amount of our present power, on the obvious ground of its involving the whole amount of present duty. In other words, a living faith, resulting as it does in a holy heart and life, tends to prevent mental dissipation, and to fix the mind upon one object, namely, that which the present moment brings before it.

IF you wished to look at a portrait of Raphael's, what would you think to see only the forehead uncovered, and then only the eyes, and so on, until the features had been separately seen? Could you gain a true idea of the picture as a whole? Yet this is the way men look at the picture of Christ in the Gospels, reading a few verses and motioes here and there, and never considering the life in its wholeness and harmony.

EARTHLY love is a brief and penurious stream, which only flows in Spring, with a long Summer drought. The change from a burning desert, treeless, springless, drear, to green fields and blooming orchards in June, is slight in comparison with that from the desert of this world's affection to the garden of God, where there is perpetual, tropical luxuriance of blessed love.

THE Church was built to disturb the peace of man; but often it does not perform its duty, for fear of disturbing the peace of the Church. What kind of artillery practice would that be which declined to fire for fear of kicking over the gun carriages, or waking up the sentinels asleep at their posts?

ST. AUGUSTINE remarks that the true servants of God are not solicitous that he should order them to do what they desire to do, but that they may desire to do what he orders them to do; that is to say, that they may have no will in distinction from and at variance with the Divine will.

MINGLING in the world, in the midst of our families, in discharge of the ordinary duties of life, it will be with us "according to our faith." We may have God with us, who is ready to bear the banner and fight the battles of those who trust in him.

IT is a part of God's spiritual economy to purify his people by means of the various crosses which he lays upon them. We should bear with entire meekness and patience the infirmities and defects of others.

WE have nothing to do but surrender ourselves to God each day, without looking further. He will carry us in his arms as a tender mother bears her child.

A DESIRE of anything, or complacency in anything, which does not place God's will first, is infidelity to God's claims.

OF all earthly music, that which reaches farthest into the heaven is the beating of a loving heart.

GOD pardons like a mother, who kisses the offense into everlasting forgetfulness.

Ladies' Port-Folio.

THE VIOLET.

BY JEAN FLOYD.

I FOUND it in an ancient book,
In the garret's gloom and must:
It was only a pressed violet,
Only returned to dust.
It was only a pressed violet,
Perfume and color fled,
Yet I touched the phantom reverently,
As sacred to the dead.

The book was old—its purple
And gold was dull and frayed—
Its leaves grown yellow—marred withal
By tracks the worm had made.
Some youthful poet's verse—to-day
By all the world forgot,
As he within his humble grave,
Alas! the dreamer's lot.

The rhymes had touched one heart, at least,
For there the violet lay,
Mute record of I know not what
Experience, passed away—
Of passion or of quiet thought,
Of heart's decline or glow,
I see a light of young romance
Shine out of long ago!

Only a pale, pressed violet
'Twixt dusty leaves—no more;
Yet lives once lived are shadowed in
The poem and the flower;
And the chords that through humanity
Mysteriously twine,
By these have linked the grace unknown
Of perished dreams, to mine.

IT CAN'T BE DONE.

As a constant reader of the RURAL NEW-YORKER I have become deeply interested in the articles which have appeared from time to time upon farmers' wives and their work. Up to the present I have felt no desire to enter into the controversy; but the article in the RURAL of Nov. 9th, by H. H., upon her neighbor, Mrs. R., seems so overwrought, and so very like the fairy stories that interested us in our childhood, I feel impelled to give my ideas as a practical view of the case.

I have spent the greater part of my life upon a farm, and think I know of what I write. This Mrs. R. has thirteen in her family through the hot weather, and the care of the milk from sixteen cows; and we are told she does all her work without help, besides making and tending garden, feeding calves, building morning fires, and other work that belongs to the men. She is able to do all this work without "grumbling or complaining," because she has her husband's encouraging words," and has inherited from her mother (who never had any hard work to do) good health and a strong constitution.

Now, if we grant that her strength will hold out through all this labor, is it possible for one pair of hands to do all in the time allotted? I think not.

The working hours of a woman on a farm are sixteen—ought not to be more, and cannot well be less. With the milk from sixteen cows the churning must be done every day; the straining, skimming and emptying of milk, churning, working and packing of butter, washing of pans, pails, churn, etc., and keeping the milk-room clean and in good order, will take, at a low estimate, four of the coolest and best working hours of the day. One hour for meals, and one hour for those odd jobs and little hindrances which we never make any account of, but which are sure to come, leave her ten hours for the housework proper. By odd jobs I mean such as taking her hands out of the bread to attend the call of a tin peddler, or the colts come up from pasture to an empty trough for drink. She cannot resist their pleadings, so she just throws on her sun-bonnet, runs out and pumps a few strokes to last until the men come to dinner; or the old turkeys have called their whole family over the fence into the garden, and she must drive them out or all the early cabbages will be destroyed; or mother hen brings a nice brood of chickens to the back door for feed; or a fine swarm of bees come out, and she must hive them; or if they alight higher than her courage will let her climb, she must go and call some of the men; or the little one comes in from play with a "fistle" in her foot and wants "moover" to get it out; or husband comes in and wants wife to take a needle, quick, and fix his suspenders, or sew on a button that he has burst off while making an unusually heavy lift—and many more that it would be tiresome to mention.

I have seen many smart women, women with tact and system and order, and the conveniences and modern improvements for dairy work; but I never saw one pair of hands that in ten hours could do the baking, washing, ironing, mending, getting three meals, washing, combing and keeping children presentable, drying corn, picking berries, putting up fruit and making pickles for Winter, cleaning house, making soap, carpets and bedding, going to the village on errands, entertaining company, visiting, sewing and knitting, and finding an hour or two each evening, after the children are in bed, for reading and conversation. No! H. H.! it must be an ideal woman of whom you speak! It can't be done! MRS. W. R. B.

Phelps, N. Y., Nov., 1872.

GEN. THOMAS' widow will spend the winter in Florence.

EVENING IN A FARMER'S HOUSE.

I AM doing to-night what I have never done before—writing an article for a paper. But I have taken courage by reading so many excellent articles in your "Ladies' Port-Folio" department, having read them with a great deal of interest, especially those pertaining to agriculture, its pursuits, and the homes of farmers.

I am a daughter of a farmer and know something of the lives they lead; and as farmers usually make it a life of toil, I find that those who do the most labor, work early and late, going through with the same routine, corn, oats and potatoes, reading little but their own town paper, falling asleep as soon as their day's work is done, being able to converse on nothing but what is daily transpiring around them, are the kind of farmers that city people judge the masses by.

A farmer of course has his cheeks bronzed by the sun, and often misshapen with toil. But is that any reason why he cannot have a cultivated brain, a refined nature, and be conversant with all general topics of the day, as well as merchants and professional men? I say he can. According to the strength given, his work is no more than his co-workers, the female members of his household. To be a good farmer one must have perseverance, patience, and a contented disposition; with these he will come out purified, and "excelsior" will ever be his motto.

I will give a partial description of our humble home; for we can neither boast of wealth nor a lovely dwelling, but of a farm situated about two miles from a thriving village—an old homestead, descended to us for four generations back; an old house that has stood the winters for over one hundred years—but a very pleasant home to me, as every footstep is familiar; and at evening, after the "chores" are all done, and we gather around the center table of our pleasant sitting-room, reading our daily paper, and once a week the RURAL NEW-YORKER, which comes as a dear friend, and with books, which we have never denied ourselves, we pass each evening of the week entertaining one another—not alone in reading aloud, but in conversing upon what has been read, so advancing with those who have the advantages of city schools and other privileges, and storing our minds with knowledge which will be useful to us in after life, enabling us to assert an independence in whatever place in society we may hereafter assume. I hope this humble assertion from one of "Eve's daughters" may not find its way into the Editor's scrap basket, to find its way out out only through the nimble fingers of some boy selling papers, or to be laid silently upon the grate with hundreds of others of like production.

ALPHA.

DOMESTIC HAPPINESS.

THE great end of prudence is to give cheerfulness to those hours which splendor cannot gild, and accumulation cannot exhilarate. Those soft intervals of unbended amusement, in which a man shrinks to his natural dimensions and throws aside the ornaments and disguises which he feels in private to be useless incumbrances, and to lose all effect when they become familiar. To be happy at home is the ultimate result of all ambition, the end to which every enterprise and labor tends, and of which every desire prompts the execution. It is, indeed, at home that every man must be known by those who form a just estimate of his virtue or felicity; for smiles and embroidery are alike occasional and the mind is often dressed for show in painted honor and fictitious benevolence.—*Johnson.*

WOMAN PERSONALS.

MISS SARAH C. LEWIS of Braintree, Mass., bequeathed, at her death, the income of her house and $2 per week to be applied to the care of her favorite tortoise-shell cat; recently the cat who inherited this home and annuity died, and the Universalist Church succeeded to the entire property in accordance with the will of the deceased. Did the cat die a natural death?

THERE is a story that a handsome young lady named Miss MOSS, whose father is reported to hold high official position under the British Government, reached Knoxville, Tenn., recently, having traveled from the mother country to meet and wed her affianced lover who had preceded her several months and is a resident of the above-named town.

ACCORDING to "Eli Perkins" an Ohio young lady made a formal proposition of marriage recently to THOMAS NAST, the artist, who responded by sending the would-be wife a cartoon containing Mrs. NAST and the children, labeled "the only objections."

THE Shah of Persia, on the occasion of his daughter's marriage, created a new female order called "Order of the Sun," and bestowed the first decoration on his mother.

A TERRE HAUTE, Ind., lady is preparing a lecture upon "The Conflagration of Love." It will probably be as graphic as a description of the Chicago fire.

MRS. SARAH E. FULLER, a wood engraver of this city, has opened a studio for the reception of female pupils desirous of learning the art.

MISS MOLLIE NOLAN of St. Louis, Mo., has applied for a patent for a hand fire extinguisher of her own invention.

Reading for the Young.

TEACHING PUBLIC SCHOOL.

Eighty little urchins
Coming through the door,
Pushing, crowding, making
A tremendous roar.
Why don't you keep quiet?
Can't you mind the rule?
Bless me! this is pleasant,
Keeping public school.

Eighty little pilgrims
On the road to fame!
If they fail to reach it,
Who will be to blame?
High and lowly stations,
Birds of every feather,
On a common level
Here are brought together.

Dirty little faces,
Loving little hearts,
Eyes brimful of mischief,
Skilled in all the arts.
That's a precious darling!
What are you about?
"May I pass the water?"
"Please may I go out?"

Boots and shoes are shuffling,
Slates and books are rattling,
And in the corner yonder
Two pugilists are battling!
Others cutting didoes,
What a bothersation!
No wonder we grow crusty
From such association.

Anxious parent drops in,
Merely to inquire
Why his olive branches
Do not shoot higher?
Says he wants his children
To mind their p's and q's,
And hopes their brilliant talent
Will not be abused.

Spelling, reading, writing,
Petting up the young ones,
Fanning, scolding, fighting,
Spurring on the dumb ones.
Gymnasts, vocal music?
How the heart rejoices
When the singer comes
To cultivate the voices.

Institute attending,
Making out reports,
Giving object lessons,
Class drills of all sorts;
Reading dissertations,
Feeling like a fool—
Oh, the untold blessing
Of keeping public school.

A CHRISTMAS CAKE,

AND WHAT CAME OF IT.

BY MRS. SARAH D. HOBART.

IT was Christmas Day, and Mrs. LENNOX was finishing her morning's work by making a large and savory fruit-cake for the minister's Christmas dinner. Three rosy-cheeked, curly-headed little ones—two in chairs and one standing on tip-toe by the table—watched the process with eager eyes till the last touch was given and the dough transferred to the baking tin.

"Now run away, all of you!" said the mother; and, taking off her spectacles to wipe her eyes, she carelessly laid them upon the table while she stirred the fire.

CHARLIE and WILLIE went to the window to look at the gay sleighs, with their prancing horses, and little three-year-old ROBBIE slipped down from his high chair and, catching something up from the table, buried it deep in the yielding dough which stood so invitingly near. In a moment more the cake was in the oven, and, coming back to the table, Mrs. LENNOX began looking for her spectacles. But they were not to be found.

"CHARLIE—WILLIE!" she cried, "have you seen them?"

The boys said "No," little ROBBIE shaking his curly head and protesting his innocence as strongly as either of the others; and the mother searched and searched. Down the long rows of pantry shelves, in the flour barrels, the sugar box, the pickle jar—in every spot that mischievous hands reach—but all in vain. At last she gave up the quest in despair, and, putting on her old, steel-bowed ones, drew the cake from the oven.

Such a beautiful golden-brown as it was, with here and there a purple raisin breaking through the tender crust. Wrapping it up carefully, she sent it across the way to the parsonage, and began preparations for dinner.

* * * * * *

Mrs. GRAY, the minister's wife, was slicing her cake with many kind thoughts of the giver, when the knife rasped against something hard. Cutting it out carefully, she produced a pair of gold spectacles.

"Just see what I have found!" she cried, running into the sitting-room where her husband was writing. "Was there ever such a woman! Who but Sister LENNOX would have thought of storing away a Christmas gift in such a manner? And just when you were wishing for them so much. It's like a fairy tale. I must go and thank her at once!"

Away she hurried, for the two houses were the closest and best of neighburs, and entered her friend's parlor just as the latter was relating to her husband the story of her loss.

"How can I ever thank you?" said Mrs. GRAY."

"It's nothing, nothing at all," answered Mrs. LENNOX, with that air which we all assume when we feel conscious of having performed some good deed.

"It seems as if the LORD always sends what we most need; and only last night husband said there was nothing he wished for so much!"

"Times must be very hard at our minister's if a fruit-cake is such a great rarity," thought Mrs. LENNOX.

"His sight is failing so fast," Mrs. GRAY went on, "he had been thinking of buying a pair of steel-bowed ones—the best we could afford on our slender income, but they would *not* be exactly suited to a minister, you know. You are our good fairy. You divine our wishes before they are expressed. May the LORD bless you!" and she wrung her friend's hand and hurried home.

"'Failing sight!' 'steel-bowed!' A light was breaking in on Mrs. LENNOX's mind. She stood at the window a moment, thoughtfully rubbing her poor old glasses, that looked so cheap and plain beside those she had lost. And it *was* a loss, for they were far from wealthy, and it would be many a day before she could afford another pair; but if any tears dimmed her eyes they were all gone when she walked back to the happy group by the fireside; and, catching up the tiny cause of all this trouble, said, in her cheery way, "Ah, little rogue! you know who needed them the most. Mother's old ones will do very well, and our minister will have indeed a 'Merry Christmas!'"

A STORY FOR THE CHILDREN.

A FRIEND of ours told us a story a little while ago, which interested us so much that we want to tell it to all our little friends. This gentleman owned a fine horse, which was very fond of him, and would come from the pasture at the sound of his voice, and follow him about like a dog. Well at one time the horse became lame, and was obliged to stay in his stable, and not be used for many weeks, and it was during this time that Mr. C. became interested to see how much the horse knew and how kind his sympathies were.

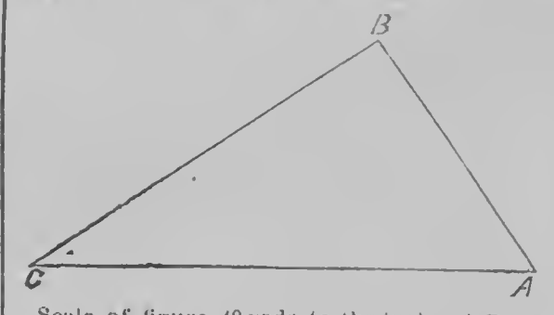
An old cat had made her nest upon the scaffold just above the horse's manger, and had laid there her little family of five kittens to bring them up under good tuition, we suppose. She and the horse got on nicely for some days. She jumped down into his manger and went off for food, and then came back and leaped up to her kittens again. But one morning she rolled off into the manger, with her foot bleeding, and badly hurt, so that she could scarcely crawl but she managed to limp away on three feet and get her breakfast; but when she came back she was entirely unable to get up to her kittens, and what do you think she did. She lay down at the horse's feet, and mewed and looked up several times, till at last pony, seeming to understand her wants, reached down, took the cat in his teeth, and tossed her up on the scaffold to her kittens, who, we doubt not, were glad enough to see her.

This, Mr. C. told us, he saw repeated morning after morning. Kit would roll off into the manger, go and get her breakfast, come back, and be tossed up to her family by the kind horse, who must have understood cat language and been willing to listen to it.

The Puzzler.

PROBLEM.—No. 9.

RESOLVE 270,000 cubic rods into three factors, which shall constitute the sides of a triangle containing an area of ten acres and having also a perimeter that measures 200 rods.



Scale of figure, 40 rods to the inch. A B + B C + C A = 200 rods. A B + B C + C A = 270,000 cubic rods. Area, A B C = 10 acres.

☞ Answer next week. B. F. BURLESON.

CURIOUS QUERIES.—No. 1.

WHY is a promissory note like a rosebud?

☞ Answer next week.

PUZZLER ANSWERS.—Dec. 7.

ILLUSTRATED REBUS No. 18.—Washington crossing the Delaware.

MISCELLANEOUS ENIGMA No. 7.—Working out enigmas.

BIBLICAL ENIGMA No. 1.—Think and say all you can of the good qualities of others; forget and keep silent concerning the bad qualities.

BOTANICAL RIDDLE No. 3. 1, Cork; 2, Mistletoe; 3, Arack; 4, Birch; 5, Damson; 6, Catch Fly; 7, Fig; 8, Willow; 9, Citron; 10, Sandal; 11, Holly; 12, Clove; 13, Coffee; 14, Palm; 15, Aspen; 16, Evergreen; 17, Dyewood; 18, Ash; 19, Arbor Vitæ; 20, Locust; 21, Papaw; 22, Woodbine; 23, Mace; 24, Vine.

CROSS-WORD ENIGMA No. 8.—Rural.

MOORE'S RURAL NEW-YORKER.

TERMS, IN ADVANCE:

Subscription.—Single Copy, $2.50 per Year. To Clubs:—Five Copies, and one copy free to Agent or getter up of Club, for $12.50: Seven Copies, and one free, for $16; Ten Copies, and one free, $20—only $2 per copy. As we are obliged to pre-pay the American postage on papers mailed to foreign countries, Twenty Cents should be added to above rates for each yearly copy mailed to Canada, and One Dollar per copy to Europe. Drafts, Post-Office Money Orders and Registered Letters may be mailed at our risk. ☞ Liberal Premiums to all Club Agents who do not take free copies. Specimen Numbers, Show-Bills, &c., sent free.

ADVERTISING RATES:

Inside, 14th and 15th pages (Agate space)	30c. per line
" 5th, 7th and 13th pages	1.00 "
Outside or last page	1.50 "
Fifty per cent. extra for unusual display.	
Special Notices, leaded, by count	2.00 "
Business "	2.50 "
Reading "	3.00 "

☞ No advertisement inserted for less than $3.

HINTS, REQUESTS, SUGGESTIONS, ETC.

Clubs Coming!—Our first Club for 1873 came just a month earlier in the season than the first for 1872, and eight of its ten members paid $2.50 each in order to secure the Premium Engraving. Others are coming, and the Campaign is fairly opened. "Push on the column," good recruiting friends of the RURAL BRIGADE! Now is the Time to Work and Win!

Begin Clubs Now!—And to all who want the paper from date, or either one year (at $2.50) or 15 months (at $3) from Oct. 1, we will send the paper accordingly, with Premium Engraving post-paid. The whole club can start at one time, or part Jan. 1st and part earlier. Note this fact.

Premium Picture Now Ready!—Agents and Subscribers will please note that our Premium Engraving is *Now Ready*, and that copies are promptly mailed, post-paid, to all entitled. We are now filling all orders on day of reception, and think we shall be enabled to do this through the season, so that no one will have to wait weeny days or weeks for the Beautiful Premium Picture.

"Progress and Improvement."—MOORE'S RURAL for 1873 will be better than ever before, in both CONTENTS AND STYLE. It will appear in a NEW DRESS of Clear and Beautiful Copper-Faced Type, and present other **Decided Improvements.** Agents and subscribers will please note this, and if they tell their friends, so much the better.

News of the Week.

CURRENT TOPICS.

The Fifth Avenue Hotel Fire.

A FIRE occurred in Fifth Avenue Hotel, this city, the night of December 10th, by which ten servant girls in a single sixth story room were suffocated and horribly burned. The details of how the fire caught, spread and was extinguished are unimportant, nor is the damage done to the building of any consequence compared with the bare, horrible fact we have stated above. Of course it is supposed that some one was to blame, but the verdict will probably be the reverse. The fact stated, however, ought to deter people from living or sleeping in such elevated rooms without some available means for escape always at hand. Every room ought to be supplied with rope ladders, properly and permanently fastened and reaching to the ground.

Increasing the President's Salary.

IT is now proposed to increase the salary of the President of the United States to $50,000 per year and limit his term of office to six years, permitting no re-election. We are in favor of one term, but we would make it six or eight years; and we do object to a $50,000 salary. With the appropriations annually made for "contingent expenses," and the care that Congress takes of the White House, we believe it too much.

No More Assessors and Assistant Assessors.

THE House of Representatives has passed a bill abolishing the offices of Assessor and Assistant Assessor, and transferring their duties to the Collectors and Deputy Collectors. The act is to take effect July 1, 1873. It requires the latter officers to give additional bonds for the discharge of their new duties. We hope this is a retrenchment measure, though we cannot congratulate ourselves that it is until we see the text of the bill.

The Philadelphia Centennial.

THERE is another scheme now to deplete the United States Treasury in order to further the schemes of a few speculators. Philadelphia asks Congress to appropriate money in aid of the proposed Centennial Exposition. This is absurd; it is outrageous to ask the people of this country to make any such contributions. We hope the people will see to it that their Representatives in Congress do no such thing.

Political Chaos in the South.

FROM all we can learn of the political condition of Louisiana, Alabama and Florida, there seems to be need that politicians there be suspended—if not by the neck—from further power to work anarchy and confusion. We sympathize most sincerely with the people of the States named, who must suffer under the corrupt schemes and ambitions of men who seem to care less about the public interests and more about their own security in power and place. We hope Congress will do something to relieve these States from the demoralization that is sure to result if the present state of things continues.

Elect Presidents by Direct Vote of the People.

A BILL has been introduced in the United States Senate providing that President, Vice-President and Senators shall be elected by the direct vote of the people. We hope it will pass. It is the only sensible way of electing these officers so long as they are elective, and no valid objection that we can conceive of can be made to it.

THE SEASON, CROPS, PRICES, ETC.

Lyndonville, Vt., Dec. 9.—Winter has set in really in earnest. A foot or more of snow fell about a week ago, and it has snowed nearly every day since. It is seldom we have so much snow so early in the season. The ground is slightly frozen and must lie warm under its snowy covering. The crops the past season were very good—hay and corn in particular; although the weather was unfavorable in which to secure them. Grain suffered considerably in consequence. The potato crop was light and more or less affected with the rot. Quality poor. Horses, cattle and sheep are in demand and bring fair prices. Northern corn is worth $1 per bushel; oats, 60c.; potatoes, 50@60c.; pork, whole hog, $7 per hundred. Little or no surplus pork in this section.—I. W. S.

Yadkin Co., N. C., December 10.—The various crops raised in this county the past season have generally been above an average. Corn, wheat and oats were twenty per cent. above. Rye, full average. Fruits of all kinds abundant; the peach crop 10 per cent. above an average. Considerable quantities of apples and peaches were dried; balance made into brandy; large amount of blackberries dried. Tobacco crop as to quality above an average, and is selling from $5 to $25 per hundred, according to quality. Corn, 50c.; wheat, $1.35; oats, 40c.; dried apples, 3 to 5c.; peaches, 12½ to 15c.; blackberries, 6c.; pork, $6 to $7 per hundred; hay, 40 to 50c. per hundred pounds. The horse disease has made its appearance all over the county.—J. W.

Oregon, Mo., Dec. 4. Weather more like Spring than the beginning of Winter. Farmers are about done gathering corn, which is the best crop for many years. The fall grain looks well, with a good breadth sown. Hogs are the farmer's main stand-by in this county, which annually feeds about twenty thousand, besides a good supply of cattle. Grain market is very low; shippers say they have not the money to move much grain, even at these extremely low prices. Wheat (Spring) $1.10 per bu.; rye, 35c.; barley, 25 to 37c.; corn, 15 to 18c.; oats, 12½c.; apples, 85 to $1 per bu.; pork, $3.25 to $3.60 per cwt.—J. W. M.

Orleans, Linn Co., Oregon, Nov. 23.—Weather for the past week has been clear and frosty—cold enough to make ice at night: something new for this part of Willamette Valley at this time of year. Wheat, 55 cents per bu.; oats, 30c.; potatoes, 30c.; onions, $1.50; hay, $18 per ton; beef, 10c. per lb.; cows, $30@40 each; horses, $50@75; hogs, 5c. per lb., gross; a great deal of Fall grain sowed. Eastern Oregon covered with snow, about two feet deep; none in this valley yet.—G. H. R.

Toledo, Tama Co., Iowa, Dec. 4.—Nice Fall: past week very cold—5° below zero on Thanksgiving Day; 9° below the 29th. Wheat yields ten to twenty bus. per acre; corn 35 to 60 bus.; potatoes, a good yield; fruit trees beginning to bear; do well. Wheat worth 60@85c.; barley, 20@40c.; potatoes, 12@15c.; eggs, 15c.; butter, 15@20c.—F. H. H.

Charlotte, Mich., Dec. 1.—Extremely dry here the past Summer and Fall. Cold weather the past month; little snow yet; wheat an average crop, bringing a fair price.—H. L. H.

SEMI-BUSINESS PARAGRAPHS.

Facts Worth Knowing.—The New Wilson Under-Feed Shuttle Sewing Machine is to-day the simplest, most perfect, most easy operated, best made, most durable, and in every way most valuable sewing machine in existence, and it is sold fifteen dollars less than all other first-class machines, on easy terms. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

The Youth's Companion of Boston is a thoroughly wide-awake paper, having among its contributors such writers as Prof. De Mille, Louisa M. Alcott, Sophie May, Mrs. Rebecca Harding Davis and Mrs. Louisa Chandler Moulton. No writers more attractive in the country, and no publication for young people more enterprising and useful.

Which No. 2266, Stem Winder—bearing Trade Mark "Fayette Stratton, Marion, N. J." —manufactured by United States Watch Co., (Giles, Wales & Co.) has been carried by me four months; its total variation from mean time being five seconds.—DAVID T. BROWN, Sup't Lackawanna & Bloomsburg R. R., Kingston, Pa.

Facts for the Ladies.—Miss ELLEN FERRIS, Troy, N. Y., earns annually about $700 with her Wheeler & Wilson Lock-Stitch Machine. See the new Improvements and Woods' Lock-Stitch Ripper.

Clover Rubbers and Cleaners.—The simplest and best in market. Price $120. Made by ST. JOHNSVILLE AG'L WORKS, Mont. Co., N. Y.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Dec. 16, 1872.

THE Money market through the past week worked with much closeness, and borrowers, of all classes, are now looking to the New Year for easier rates and a more comfortable supply. Discounts, not accommodated at Bank, are 9@12 per cent. on the Street, and the Stock Brokers are paying 7@8 per cent. for the use of temporary balances from day to day. The Treasury will disburse $25,000,000 in Gold and $1,800,000 in Currency for Interest on the Public Debt due Jan. 1, and the various States, Railroad Corporations, Banks, etc., will pay out from $30,000,000 to $40,000,000 additional for January Interest.

Interest is now lower in London and on the Continent, and a speculation is looked for early in the New Year on the other side in Stocks of nearly all descriptions, including American. This calculation may or may not be realized so far as our interests are concerned, but it may be remembered that Congress is about to pass an Act authorizing the Secretary of the Treasury to transfer the U. S. Registered Stocks, nearly all held at home, into Coupon Bonds, which alone are marketable abroad. The total of these Registered Stocks, of all classes, is no less than $733,000,000, and if only a tenth of the amount should be converted and sold to Europe the relief will be timely to our foreign Exchanges.

The general trade of the past week was moderate. The Imports continue to run ahead of last year, but with the exception of Fancy Goods, Books, Paintings, Jewelry, etc., sent over for the Holiday shopping trade, the business doing from store is light. There seems to be a good promise of business, now setting in for the Christmas season.

The Stock Exchange has been excited chiefly by the fluctuations in Pacific Mail Stocks, which is 8@10 per cent. lower than the week before. The speculation in the Stock is on an immense scale, and the whole Capital of 300,000 Shares was sold over and over again during the week. The inside party are credited with an effort to get the price below 70 per cent. with the purpose of a fresh upward speculation.

The Railroad Stocks are quoted irregular. Most of them are slightly better than on our last report. The prominent exception is Rock Island, which sold down to 109¾ per cent.

Gold is 1 per cent. lower, while Foreign Bills, sixty days, are stronger on account of the cheaper rate at which they can be discounted in London.

The U. S. Stocks in sympathy with Gold are ¼@½ per cent. lower on the Bonds dealt in abroad.

The following are the comparative movements of the City Banks for the past fortnight:

	Dec 7.	Dec. 14.
Capital	$80,019,200	$80,019,200
Loans	278,888,900	277,620,400
Gold and Greenbacks	59,589,900	58,937,400

PRODUCE AND PROVISIONS.

NEW YORK, Monday Dec. 16, 1872.

Receipts.—The receipts of the principal kinds of produce for the past week are as follows:

Corn, bush	91,500	Meal, bbls	3,200
Oats, "	188,250	Flour, "	79,200
Wheat, "	241,600	Eggs, "	5,520
Rye, "	410	Cotton, bales	16,602
Barley, "	25,600	Hops, "	949
Malt, "	8,500	Wool "	2,590
Seed, "	4,000	Butter, pkgs	17,400
Beans, "	6,500	Cheese "	60,100
Meal, bags	3,480	Lard, "	10,460
Peanuts "	2,400	Dried fruits, pkgs	1,670
Pork, bbls	2,500	Cut Meats "	9,420

Beans and Peas.—There is less inclination to accept late prices, as supplies are running light. The business is limited to jobbing lots.

We quote Mediums, prime $2.70@2.75 per bushel; good do., $2.50@2.60; fair do., $2.00@2.25; prime marrowfats, $2.50@2.55; good do., $2.50@2.60; common and fair do., $2@2.25. Green peas at $1.80@1.90. Southern black-eyed peas, $2.70@2.75. Canada peas in bond, $1.12.

Beeswax.—Shippers are closing out larger holders, and as the stocks receive only light additions, higher prices are obtained. Sales of choice Southern have been made at 33c., but the more general market prices are 31@35c. for Western and Southern.

Butter.—The demand for choice butter still continues, and we shall soon be forced to open upon some of the good and medium grades that have hitherto been neglected. The market is noticeably brisk, still, there is a more favorable prospect than ever for a steady Winter trade after we turn out of the holidays. It was thought that there would be great difficulty in moving the under qualities while we were in receipt of such large quantities of fine stock as we had in the Fall; but the trade has been using that class exclusively, and must hereafter supply itself from the sound and sweet stock that

was only a little off in comparison. Rolls are scarcer. Baking grades are moving moderately. Common export grades are very quiet. A few lots of Canada are here, the best bringing 30c.

Orange Co. pails, fine, including creamery, 36@38c.; Penn. and N. J. pails, good to fine, 28@35c.; common, 15@18c.; selections, half tubs, 33@35c.; extra half tubs, 38@40c.; half tubs in lots, 28@30c.; good to prime firkins, 27@29c.; do. Welsh, Fall, 27@28c.; Welsh tubs, fair, 25@23c.; other grades of State, 18@22c.; Western Reserve, choice, 21@22c.; Western fair to good, 13@15c.; common, 10@11c.; grease butter, 7¼@8½c.; State dairies, tubs on, 28@32c.; do. all firkins, 28@30c. Rolls, choice, 27@28c.; do., fair to good, 20@21c.; do., common, 16c.

Cheese.—There is no increase in the demand and the market in all material points stands about as last week. The market improvement in the receipts comes from the fact that a considerable quantity of stock had been purchased by parties here sometime since and had been held back in the interior, which owners now are ordering forward; the bulk of it is put in store. Shippers' orders are still very small, and they have been in the market only for just such lots as can be immediately placed, as the rates of ocean freight have been ruling decidedly against them. They are able to secure some fine lines of stock at 14c.; and for the very best factories refuse to go above this price. We have sales reported in one or two instances as low as 13½c. The principal holders refuse to sell at these figures and at the moment are satisfied with the home trade, which is steadily increasing. From this source 14½ is realized for strictly choice lots. The stock here is liberal.

We quote State factory, choice, 14@14¼c.; good to prime, 13¾@13¾c.; fair, 13@13c.; State dairy, 13¾@13¾ for good to prime; 11¾@12c. for fair lots; for Ohio factory, 10@11½c. for fair to prime; English dairy, prime, 13½@14c.; fair do., 11½@13c.

Cotton.—Exporters have been buying freely and the market is a shade higher. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	16¾	17	17¼	17¼
Good Ordinary	18¼	18¼	18¾	19
Strict Good do	18 9-16	18 13-16	19 1-16	19 5-16
Low Middling	18¾	19¼	19¾	19¾
Middling	19⅜	19¾	20¼	20⅜
Good Middling	21¼	21¾	21¾	22

Sales for forward delivery on the basis of low middling are at 19 1-16 for December, 19 5-16 for January, 19¼ for February, 19 11-16 for March, 20 for April.

Dried Fruits.—The general market is very quiet, as usual at this period, when the trade are busy with foreign for the holidays. Apples have been without shipping demand. Supplies are liberal, and the few lots selling to the home trade are at weak prices. Peeled peaches are in the buyer's favor. Other articles unchanged.

Southern apples, 4@4½c.; do. sliced, 6@9c.; Western, 5½@5¾c. Peeled peaches at 14@15c. for Va., 13@15c. for Va., and 15@19c. for North Carolina. Unpeeled peaches at 1½@3c. for quarters, and 5½@6c. for halves. Cherries, 22@22½c. Plums, 14@18c. Blackberries, 9@9¼c. Raspberries, 3½@3¾c.

Eggs.—Fresh have been offered freely at the annexed prices, with light sales. Limed are in full supply, and have a fair demand. We quote at 34@35c. for Western fresh, 35@36c. for State and Pennsylvania, 37c. for Jersey. Limed at 25@26c. for Western, and 26@27½c. for State.

Flour.—Shippers have been checked from buying other than small lines through the scarcity of ocean freight room. Holders are firm in their views in view of the moderate supplies,

Superfine State	$5 90	@	6 30
Common extra do	7 00	@	7 05
Good to choice do	7 10	@	7 15

Common to fair extra St. Louis	7 10	@	8 30
Good to choice do	8 55	@	11 00
Extra Southern	7 10	@	9 15
Good to choice do	9 20	@	12 00
Rye, common to fine	4 80	@	6 50
Corn meal, Western	3 40	@	3 50
Buckwheat flour	3 70	@	4 35

Fresh Fruits.—The exports of apples the past week, reach about 5,700 bbls. Shippers have wanted more stock, but they have been careful in closing out orders on account of the light amount of freight room offering. Fine apples are held with confidence, but other qualities are offering low. Grapes are touched with frost, and prices are very irregular. Cranberries are dull and unchanged. Peanuts, prime Tennessee, have been sold at $1.30@1.25.

We quote—Apples, common, $1.35@1.75; do. fair to good, $2@2.50; do. fine, $2.75@3.25; do. lady, $4@8. Pears—Cooking, ₱ bbl., $5@6. Grapes.—Catawba, 6@8c.; Isabella, 3@5c. Cranberries, prime, per crate, $3.25@3.50; com. to fair, $2.50@3; bbls., $8@10.50; choice bbls., $11@12. New Virginia peanuts, $1.40@1.75.

Grain.—Wheat is higher, with limited offering. Sales of No. 2 Milwaukee at $1.57@1.58; $1.52 for No. 2 Chicago and $1.45 for No. 3 Milwaukee. Corn is higher under increased business. Sales of old Western mixed at 63c. in store, and 67c. do afloat. Car lots of new mixed at 60@62c. Oats are quiet at about late figures. We quote at 43c. for inferior mixed State, 50@52½c. for new mixed Western, 49½@51c. for black, 53@54c. for stained white Western.

Hay and Straw.—Prices have been forced up a trifle with the closing of river navigation. The demand is not active.

We quote new shipping hay $1.10@1.15; retail do., $1.10@1.75; salt, do., 70@90c.; clover, 80@90c. Straw at $1.30@1.45 for long rye, $1@1.20c. for short rye: 80@100c. for oat.

Hops.—As was indicated last week, the market has fairly reached 50c for the best growths of State hops. This is the price held out for by growers, and the impression has been that it would start larger shipments forward from the interior, but the latest reports are that the views of hoplers in the country are being worked up in sympathy with the changes here, and the trade is as unsettled as ever as to the probable limit of the market. A large increase in the supplies from the other side, dealers contend, would put the market back. We have had heavier importations, but brewers have been working so long on short supplies that they have bought up about everything that was fine offering, and they seem as fully disposed to meet the current market prices as they did the low rates ruling previously.

New York, growth 1872, at 40@50c.; Eastern do., 30@40c.; Western do., 40@47c.; Yearlings at 25@30c.; Olds '70 10@15c.; Old olds, 08@21 8@10c.; Bavarians, 45@50c.; English, 38@45c; Belgian nominal, 28@40c.

Poultry and Game.—The market has been pretty well cleared of the old stock, and receivers are in a better position to handle fresh supplies. We are not having near so liberal arrivals as last year, but prices are ruling low comparatively as the demand has not in years proved so slack. Receivers have been able to advance prices over last week and for best Jersey turkeys obtain 18@19 State living 14@16. Western come in much better order than usual and sell close up to the prices for State. Quail are higher, with a good demand. Grouse are in small receipt and higher. Partridges are wanted at the quotations. Wild ducks are in good demand but as they are plenty, sell about as last week. Venison is plenty.

We quote prime N. J. and Bucks Co. turkeys, 18@19c., State and Western, poor to best, 14@17c. Chickens, Western, 7@12c.; State and near points, 15@16c. Geese, 12@15c. Ducks, 13@15c.

Game quotations:—Venison, whole, 12@13c.; do., saddle, 18@21c. Canvas-back ducks, $1.75@2.50; red heads, $1@1.25; mallard, 75@87c.; teal, 40@60c.; rabbits, 35@40c.; hares, 30@40c.; quail, $2. Prairie chickens, 75c.@$1; partridges, State, 75c.@$1; eastern, 62@75c.; wild turkeys, 22c.

Provisions.—Mess pork has advanced 25c., in sympathy with Western reports. Old, $13.25 on spot; new do., $13.75; old, So., Dec., $13.05; new So., Dec., $13.50. Beef is quoted at old rates with a light export movement. Beef hams selling in lots at $33. Cut meats are lower, with a light jobbing business. Smoked hams, 11@12½c.; shoulders, 6@6½c.; pickled hams, 9@9½c.; do. shoulders, 5c. Lard is easier, with a light shipping business, choice Western steam fine, 7¾c.; 7¾c. for Dec. and Jan., 8¼c. for Feb., 8¼c. for March, 8¾c. April. City, 7¾c. Bacon is weak, with large offerings; city long clear, 2c., for prompt delivery. Western, for Winter months, 7¼c. for short clear, 6¾@7c. for long clear; 7@7 1-16c. for long and short together. Tallow is dull at 8¼@8¾c.

Sundries.—Honey at 28@30c. for dark and 32@35c. for white, in glass boxes; mixed lots, 21c. Cider at 6@10c. per gallon. Feathers, live geese, new, fine, per lb., 60@70c.; do. mixed, 40@50c.; hen, 75@75c.; vinegar, cider, ₱ gal., 20@25c.; do. manufactured, 15@20c.; newspapers, ₱ m. 46@4½c.; white rags, 5@5¼c.

Tobacco.—As usual at this period, just before the close of the year, there is very little trade. The few orders in the market are from the home trade, to meet current rates:

QUOTATIONS—NEW CROP.

seconds	26	@35 c.
wrappers	40	@55 c.
selections	50	@75 c.
New York State running lots	12	@16 c.
Pennsylvania assorted lots	18	@25 c.
Ohio running lots	12	@16 c.
Ohio wrappers	16	@30 c.
Wisconsin and Western	9	@10 c.

Seeds.—New clover does not come in as fast as needed. With some accumulation of shipping orders, prices have been forced up a trifle. Sales at 9¾@9¾c. for prime lots. Timothy is not wanted at the moment, and $3@3.25 are nominal prices. Rough flax is firm, at $2@2.15, the improvement mainly based upon the higher prices ruling for Calcutta linseed.

Vegetables.—Irish potatoes are selling freely, both to shippers and the home trade, and very full prices are ruling. Sweets have a light demand, but as supplies are moderate, firm prices are quoted.

Peach Blow, in bulk		$2 75@ 3 00
Early Rose, "		2 62½@2 75
Jackson "		2 00@ 2 25
Dykright "		2 00@ 2 12½

Onions, red and yellow, ₱ bbl		3 00@ 3 50
" white		4 50@ —
Sweet potatoes		2 75@ 4 00
Pumpkins		4 00@ 7 00
Garlic, ₱ 100 bunches		16 00@18 00
Russia turnips, ₱ bbl		1 50@ 1 75
Carrots, ₱ bbl		1 75@ 2 00

For potatoes in shipping order, add 25c. ₱ bbl.

Wool. As prices have been run up considerably the last few weeks, both manufacturers and dealers are holding orders back in hope of prices reacting some. The arrivals are somewhat larger, induced by the enhanced prices, and there is a better assortment of stock on sale. Holders, however, are firm in their views, and the few sales reported are at full prices. Ohio fleeces 69@70c. for medium to extra; 66@68c. for State and Michigan; 60@63c. for Wisconsin; 60@55c. for Iowa, Illinois and Indiana; tub washed, 69@70c.; pulled at 69@78c. for fine and superfine.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Dec. 14, 1872.

THE market at Little Falls for the week ending Dec. 14 was very dull, the cold, stormy weather interfering with the delivery, while the usual number of buyers were not present. Farm dairies sold on a range of prices from 11c to 12½c., the latter figure being considered top price for best grades. Factories brought from 12½c. to 13c., and only a few sales comparatively. We quote Middleville at 13c., Vanhornsville at 12½c., and Countryman at 12½c. Butter comes in freely and the sale was brisk at 31@35c., according to quality. We have advices from abroad for the third week in November. Our London correspondent says the arrivals of cheese are small and stocks decreasing, fine being in good request, also good conditioned cheese under 80s. American extra is quoted at 68s. to 72s. The other descriptions of cheese sell as follows:—English Cheddar 76s. to 86s., Wiltshire double 68s. to 76s., Cheshire medium 60s. to 70s., fine 76s. to 80s., Scotch 70s. to 74s. Dutch cheese —Edams 58s. to 68s., Goudas 50s. to 60s., Derby-shape 56s. to 62s. In butter there is a steady demand for all sorts. Channels 128s., Yorks 120s., Dorsets 150s., Normandy 130s., Canadian 108s. to 110s. The corresponding prices last year were for Channels butter 110s., American cheese 66s. We have Winter now in earnest, but not a great fall of snow. Factories have not yet closed operations, and are making at intervals of three days or more.

LIVE STOCK MARKETS.

NEW YORK, Dec. 14, 1872.

COLD weather is nearly always favorable for trade, but just now people are taking advantage of it to send in beef, dressed hogs, mutton and veal ready for immediate use, and that operates against the sale of live animals. The markets have been depressed in all their departments, but at the close sheep at least are doing better, while there is a stronger feeling in hogs, and cattle are slightly improved for the moment, but it is known that large quantities are en route here, and no advance in prices can be reported. Dealers generally complain of hard times. Poultry has nearly doubled in price, hence that is not drawing off from a meat diet.

RECEIPTS OF LIVE STOCK

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	9,426	137	1,370	39,553	50,180
" last week	8,321	127	1,621	30,678	63,583
Average last year	7,167	88	2,301	25,132	25,177

Beeves.—The supply is larger than it was one week ago, and perhaps the quality has slightly improved, but the poor lots set aside for marketing when farmers sort over their stock in the Fall and select the best for further feeding, have not all been sent in. We do not look for much improvement in quality, save that the Christmas cattle will be forwarded before the holidays. After that the improved stock will begin to arrive and Texans diminish. We are still having a full supply of these "long-horns," 2,300 having been received during the week. As samples of how they are selling we instance 20 cars rubber common, 1,000 lbs. gross weight, at 8c., 55 lbs per cwt., and some still poorer at 7½c. Rough State oxen, slugs, dry cows, etc., sold still lower, and some Va. scrubs went at 7c. A fine lot of 9 cwt. grades from Delaware went at $132 each, while a few single pairs of Christmas cattle sold at 16c. This makes a wide range of prices. It is easier to sell 50 fat cattle than twice that number of poor animals. There is no difficulty in obtaining 13@13½c. for fat droves right through, 2 cars Ill. 7¼ cwt. averaging 13¾c. Chicago dressed beef is arriving in good order and in such quantities as to lessen the demand for live cattle.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Holiday cattle	15 @ 16	— @ —
Choice beeves, ₱ lb	14 @ 14½	13½ @ 14¼
Good to prime	12½ @ 13½	12½ @ 13¼
Medium	11¾ @ 12	11½ @ 12
Poorest grade	6 @ 10	7 @ 10
Average sales	11½ @	11¾ @ —

Milch Cows.—Milk run up to $5 per can after last report, and there was a scramble for good cows at better prices. Since then the price of milk has fallen to $4, and cows are less called for. Farmers had better send only good animals here during the Winter if they want to be assured of a good market. Such will command $30@75 by the car load, and $80@85 for the best when selected out. Common to fair cows go at $10@65, very few running below $30.

Veal Calves.—Receipts of live calves are not heavy, but so many are being sent in ready dressed, and so much are the latter preferred by most butchers, that it is hard work to sell live stock. One receiver sent his away to be slaughtered as the most ready means to put them into a salable condition. The regular grass calves have about all been marketed but many known as "red veals," of large size but destitute of fat, having been reared largely on butter-milk, whey, etc., are sent in both dead and alive. They sell at 3@5c. alive and 4@7c. dressed. Fat live calves sell at 8@9c., while dressed vary from 10c. to 12½c., a few reaching 13c.

Sheep and Lambs.—The arrivals are now so light that, despite the dressed mutton sent in, prices are advancing. Still the trade is not lively. Christmas sheep begin to arrive, and of course sell quite above the rates of ordinarily fat stock. Some sheep of 110@130 lbs. command 7@7½c. What we usually term fat stock is worth 6¼@6½c., with fair sheep at 5¾@6c. Some very mean lots run down to 1½c. Lambs vary from 6c. when quite thin to 7@7¾c. for fair to good, extras reaching 8c.; very many of them are sold with sheep at 6½@7c. The average of 8,115 sheep and lambs, largely good Canadian stock, was $5.51, while 5,971 not so good averaged $4.62, with 5,800 still poorer at $4.25. A few late sales were a car 75 lb. O. sheep at 5c., a car very thin 70 lb. at 4½c., a car 111 coarse 91 lb. 6¾c.

Hogs.—Besides the live reported above we have had 675 Western dressed during the week, and the numbers will now steadily increase. They are worth 5¾@5¾c., light ones when picked out selling for 5¾c. We quote live at 4½@4¾c., with city dressed at 5¾@6¾c., or ¼c. higher than last week. The close is firm.

SPECIAL NOTICES.

A Positive Radical Cure for Rupture.—The Elastic Truss Company, at No. 683 Broadway, New York, will send their Descriptive Circulars to any person afflicted with Hernia. This Truss can be sent by mail to any part of the country.

New Advertisements.

REED & BARTON,

Established 1821,

MANUFACTURERS OF

FINE

ELECTRO-PLATED

WARE.

This illustration represents a new design of Electro-Plated Fork, manufactured by Reed & Barton. In design and finish it so much resembles the solid silver that even an expert would find it difficult to detect the difference.

All their forks and spoons are made of the finest quality of Nickel Silver, and are heavily plated with pure silver.

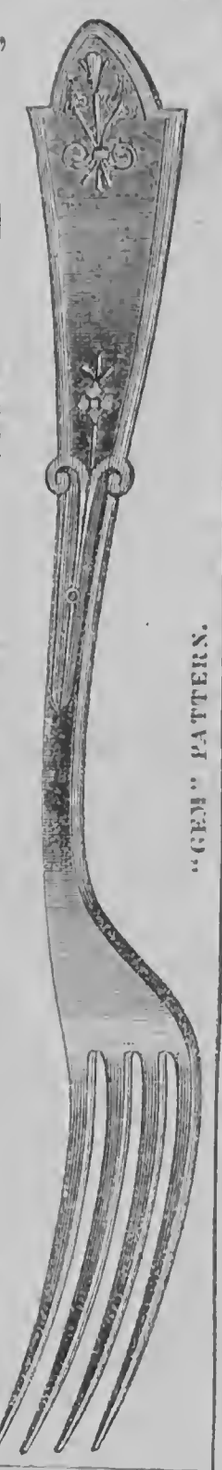
They also manufacture almost every other article of Table-Ware, such as **Tea and Dinner Sets, Cake Baskets, Fruit Stands, Water Sets, Epergnes, Candelabrums,** &c., in many new and beautiful designs.

They pay especial attention to their **Patent Seamless-Lined Ice-Pitchers,** which have been so thoroughly tested and given such satisfactory results.

Reed & Barton now have one of the largest works for the manufacture of Silver-Plated Ware in the world, but they find it necessary to make extensive additions this season. They will, besides greatly enlarging their principal factory, build a new one, 210x10, three stories high, thus adding more than 40,000 square feet of floor to the space now occupied in the production of their goods.

They have salesrooms at the factory, at Taunton, Mass., and at No. 2 Maiden Lane, New York.

Their goods can also be purchased of the principal dealers in Silver and Silver-Plated Ware.



WANTED IMMEDIATELY!

SIXTY YOUNG MEN AND LADIES—To learn Telegraphy, and receive a commission while practicing. Address, with stamp,

C. A. SHEARMAN, Supt., Oberlin, Ohio.

WANTED.—A FARMER, in Every Town, as agent for the Collins Steel Plows. For terms, &c., address COLLINS & CO., 212 Water St., New York.

$275.—NEW, FULL-SIZE, ROSEWOOD, carved legs, 7-octave, overstrung Piano for $275. These instruments are elegant in tone and finish, and are warranted as durable as any $600 piano.

$100. Superb solid walnut, 5-octave, 6 stops, double-reed, beautifully paneled Organ. Only $100.

$75. Elegant solid walnut, 5-octave Organ, paneled case. Only $75. WM. A. POND & CO., No. 547 Broadway, and 29 Union Square, New York City.

AMERICAN MERINOS.—We offer for sale about 100 of our fine thorough-breds. Also, pure Light Brahmas and Eggs. Send for Catalogue. Orders solicited. JOHN SHELDON & SON, Moseow, N. Y.

The Wheat Field of America!

Healthful Climate, Free Homes, Good Markets.

THE NORTHERN PACIFIC RAILROAD offers for sale its **Lands in Central and Western Minnesota,** embracing: 1. The best of Wheat Land: 2. Excellent Timber for the Mill, the Farm and the Fire; 3. Rich Prairie Pasturage and Natural Meadow, watered by clear lakes and running streams—in a Healthful Climate, *where Fever and Ague is unknown.*

Grain can be shipped hence by lake to market as cheaply as from Eastern Iowa or Central Illinois. Cars now run through these Lands from Lake Superior to Dakota. Price of land close to track $4 to $8 per acre; further away, $2.50 to $4. **Seven Years' Credit;** Warranted Deeds; Northern Pacific **7-30 Bonds,** now selling at par, received for land at $1.00. No other unoccupied Lands present such advantages to settlers.

SOLDIERS under the New law (March, 1872) get 160 acres FREE, near the railroad, by one and two years' residence.

TRANSPORTATION AT REDUCED RATES furnished from all principal points East to purchasers of Railroad Lands, and to Settlers on Government Homesteads. Purchasers, their wives and children **carried free** over the Northern Pacific Road. Now is the time for Settlers and Colonies to get Railroad Lands and Government Homesteads close to the track.

Send for **Pamphlet** containing full information, maps and copy of New Homestead Law. Address LAND DEPARTMENT, NORTHERN PACIFIC RAILROAD, ST. PAUL, MINN., OR 23 FIFTH AVENUE, COR. NINTH STREET, NEW YORK.

WEBSTER'S PATENT BUTTON-HOLE WORKER.

Patented June 27th, 1871.

Awarded first premium at the American Institute and Maryland Institute Fairs, 1871.

Is one of the most important inventions of the age! The most perfect **Button hole Worker** *ever invented!* So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a life-time. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over eleven thousand sold during the first week of their introduction. Local and traveling agents wanted everywhere. They sell at sight, and give over 100 per cent. profit. Sample Button-hole Worker and sample Button-hole Cutter packed in a neat case, with full directions for use, together with sample of our new and novel way of canvassing, sent to any address on receipt of 75 cents. Orders by mail receive prompt attention. Address **WEBSTER M'F'G CO.**, Manufacturers, Ansonia, Ct. Please state in what paper you saw this.

TO OWNERS OF HORSES AND CATTLE.

The only Cattle Condiment ever awarded a Gold Prize Medal.

"THE NUTRITIOUS CONDIMENT" for Horses and Cattle, has been used for ten years with great success by the largest contractors and owners of horses and cattle in the principal cities of Europe, as the **Best and Cheapest Cattle Food in the World.**

New Publications

A CHARMING HOLIDAY BOOK.
BOTANY FOR YOUNG PEOPLE.

HOW PLANTS BEHAVE, HOW THEY MOVE, CLIMB, EMPLOY INSECTS TO WORK FOR THEM, etc. By Prof. ASA GRAY, author of *Gray's Botanical Series*

Beautifully illustrated, and printed on fine paper. 4to. Price 75 cents. By mail on receipt of the price.

From the New York Times, June 15th, 1872.

"The author of this ingenious and most interesting little work for children is known throughout the world of science as not only the leading American botanist, but one of the most distinguished investigators in the field of botany, whether in Europe or America."

☞ "*How Plants Behave* should be in the hands of every child or teacher who desires to study nature intelligently."

From the Journal of Botany, London, Sept., 1872.

"*How Plants Behave* is just the book to put into the hands of a young student of Botany who is weary of the jejune text-book definitions of endless terms; it presents the science to him under an entirely novel and very attractive form, and shows him how much there is to reward the careful observer of plant-life."

From the Garden, London, June, 1872.

"One of the best botanists alive, and, as we think, the happiest of all teachers of botany, has added another pleasant little book to those he has already written for young people. Those who have read that most charming botanical work for young people—'How Plants Grow'—will be prepared to welcome the same author's account of *How Plants Behave*, in which the latest scientific investigations as to the movement of plants, and other interesting matters, are presented in a style that is sure to fascinate young people, and at the same time be welcome to older readers."

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **546 Large Octavo Pages,** is handsomely and fully illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

RANDALL'S PRACTICAL SHEPHERD: A Complete Treatise on the Breeding, Management and Diseases of Sheep.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," "Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and has (the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail, post-paid, on receipt of price—$2. Address

CLEMATIS LANUGINOSA.

IN the RURAL NEW-YORKER, Nov. 30, page 345, we gave an article on, and illustration of, one variety of Clematis. We now present our readers with a beautiful engraving of *C. lanuginosa*, well adapted for training to walls or on trellis. It is recommended to prune it down annually to about three feet of the ground, so as to secure foliage at the base, since the tendency of new growth is to develop itself with excessive vigor at the extremities. In some localities the frost kills it back sufficiently without pruning. February is the best time to prune back when it is to be done. With good, rich soil to grow in, they will make 8 to 10 feet growth or more in a season.

LIGHT FROM FLOWERS.

A YOUNG Swedish damsel, the daughter of the great LINNAEUS, was fond of amusing herself in the Summer twilight by setting fire to the inflammable atmosphere which envelopes the essential-oil glands of certain *Fraximellæ*: and one sultry Summer evening when seated in the garden, she was surprised to see luminous radiations emitted by flowers of a group of Nasturtiums; and she witnessed the same spectacle on several subsequent evenings, in June and July, 1762. Several naturalists have observed the same phenomenon, and almost exclusively upon yellow or orange-colored flowers—such as the the Sunflower, Poppies, the Marigold, and the Orange Lily.

Two interesting observations of such luminous flowers are thus described by Dr. PHIPSON:—"The Swedish naturalist, Professor HAGGERN, perceived, one evening a faint flash of light dart repeatedly from a Marigold. Surprised at such an uncommon appearance, he resolved to examine it with attention; and to be assured that it was no deception, he placed a man near him, with orders to make a signal when he observed the light. They both saw it constantly at the same moment. The light was most brilliant on the marigolds, of an orange or flame color; but scarcely visible upon pale ones. The flash was frequently seen on the same flower two or three times in quick succession, but more commonly at intervals of several minutes. When several flowers, in the same place, omitted their light together, it could be seen at a considerable distance. This phenomenon was remarked in July and August, at sunset, and for half an hour, when the sky was clear; but after a rainy day, or when the air was loaded with vapors, nothing of it was to be seen.

"On the 18th of June, 1857, about ten o'clock in the evening, M. TH. FRIES, well-known Swedish botanist, while walking alone in the Botanic Garden at Upsal, remarked a group of Poppies (*Papaver orientale*), in which three or four flowers emitted little flashes of light. Forewarned as he was by a knowledge that such things had been observed by others, he could not help believing that he was suffering from an optical illusion. However the flashes continued, showing themselves from time to time during three-quarters of an hour. M. FRIES was thus forced to believe what he saw was real. The next day, observing the same phenomenon to recur at about the same hour, he conducted to the place a person entirely ignorant that such a manifestation of light had ever been witnessed in the vegetable world; and without rela-

CLEMATIS LANUGINOSA.

ting anything concerning it, he brought his companion before the group of Poppies. The latter observer was soon in raptures of astonishment and admiration. Many other persons were then led to the same spot, some of whom immediately remarked that "the flowers were throwing out flames." As will be observed from the above instances, the emission of light from flowers occurs chiefly in the months of June and July, and during the twilight—between sunset and the time when full darkness sets in. In some cases these sparks or flashes have also been observed in the morning, before sunrise. The phenomenon is always most brilliant before a thunderstorm. It is also said that some flowers always emit light at the periods of floration and fecundation; at which periods, as has lately been found, the temperature of the petals rises above the ordinary point.—*Belgravia.*

FLORICULTURAL NOTES.

Fuchsias and Begonias.—1. I have had Fuchsias for three years, and taken the best care of them that I can, and I never have succeeded in getting one perfect flower. They drop off just as they begin to open out. What is the cause? 2. Is it the habit of the Begonia to shed its leaves?—SUBSCRIBER, *Oil City, Pa.*

1. WE cannot tell what the trouble is with your Fuchsia, but would suggest cutting it back, repotting in fresh soil composed of equal parts of good yellow loam, leaf-mold and old cow manure. 2. Begonias do not usually lose their leaves. We think you keep them too wet and give too little heat and light.

Plants for Name.—The plants received from ALLIE, North Adams, Mich., are: No. 1, *Achyranthes Gilsonii;* No. 2, *A. alrea reticulatus;* No. 3, *Calystegia pubescens*—sometimes called Double Morning Glory. It is a Chinese plant, now becoming quite common both in gardens and running wild. No. 4 we cannot name without seeing the flowers, but think it is a *Justicia.*

Chrysanthemum.—Can you give me the correct name of the inclosed specimen. It is called Chrysanthemum here.—J. M., *Hoosick, N. Y.*

THE correct name is *Chrysanthemum,* but we cannot give you the specific name of the specimen sent.

Best Time to Transplant Roses.—A correspondent writes us that he has found the best time to transplant all hardy roses is in November.

Sheep Husbandry.

WOOL BURNED IN BOSTON.

SINCE the great fire in Boston, interested persons have been showing up the amount of wool burned, until they have shown it to be apparently of little consequence—only a few million pounds. Then they try to make the amount imported appear a great thing; yet these articles make a slight impression on the holder. All know that there were burned from 9 to 12 million pounds. Then the cotton and cotton goods, together with the woolen goods burned at the same time, will make it equivalent to 50 million pounds. Every wool buyer knows that for the year of 1871 the American clip fell short about one-third; they also know the clip of 1872 is still short of that; they also know the clip for 1873 will be still less; and while the Eastern dealer has been sending out letters (to be shown to the growers) requesting their agents to send on all they have bought so that they can "close up," these writers well know they have none to send, and that they can buy but little more until they advance the price.

Again, we read an account of the wool yet unsold—*more clap-trap!* Most of the wool growers have sold their wool. Many sheep have been on the market, and it is surprising how scarce sheep are becoming. In looking around I know many flocks formerly containing from 20 to 50 each now sold off or reduced to 5 and 10 each; flocks formerly containing from 75 to 200, I find reduced to 25 to 100 each; those containing from 250 to 500 now have from 150 to 300 each, and several of the 500 and 600 flocks I know have been sold off entire, on account of disease, etc. As far as I am acquainted, I know of none increased. Gentlemen, ride around among the farmers, and you will find ample proof of these statements; and, further, you will find most of the wool now held will be carried over, unless the price is advanced. I.

Fayette Co., Pa., Dec. 9.

Dairy Husbandry.

CATTARAUGUS COUNTY DAIRYING.

THE Counties lying along the southern boundaries of New York have a reputation for butter. In some of these counties butter making has been carried on as a specialty for a long time, while in the northern and central counties of the State cheese making has been more the leading business. It was only after the introduction of the factory system that the manufacture of cheese to any extent may be said to have taken a foothold in the southern tier of counties. The inauguration of creameries, beginning in Orange Co., has gradually spread along the entire southern range of counties, and the application of the principles involved in that system has greatly improved the quality of butter over that which used to be made in farm dairies. Cheese factories have been introduced into this section of the State with good results. The topographical features of this range of country are marked. It is often broken into numerous hills and valleys, not unfrequently cut with mountains. Upon the slopes of the hills and in the valleys grass grows luxuriantly, and is sweet and nutritious. It is provided also with an abundance of pure, cool water, all of which make it admirably adapted to the production of good milk. Hence, with its favorable climate, it is a comparatively easy matter to turn off an extra quality of dairy goods.

Cattaraugus lies in this range, but may be said to be one of the counties where dairying has been recently introduced. It is situated in the west extremity of the State, bordering on Pennsylvania, and is nearly in the shape of a square of 35 miles each way. It is bounded on the north by Cattaraugus River, or Creek, which falls into the east end of Lake Erie. The Allegany River flows through the southern part of the county, and is said to be navigable a distance of thirty miles within its limits. Little Valley lies along the river and its tributaries, and it is to this section, recently visited by us, that we desire more particularly to refer. The scenery through this region is picturesque, and the valley and hillslopes seem well adapted to the dairy. The past season has been comparatively dry, and vegetation was less luxuriant at the time of our visit, in September, than in Central New York, where the rains have been so frequent as to keep the earth moist during the greater part of the Summer.

The Brooks Butter Factory.

Near Little Valley village, Mr. E. C. BROOKS has a very well arranged butter factory, which takes the milk of about 300 cows. Here we saw one of the finest pools of water that could be desired for creamery purposes. It is a large pool, going nearly across one end of the building, being walled up on the sides, and having a cement bottom. The water flowing from a spring a few rods from the factory is very cold, and abundant in quantity. The spring is on an elevation high enough to force the water above the pool, thus rendering it easy to distribute it over any part of the lower story, by simply attaching a rubber hose to the hydrant. The engine is of ten-horse power, and is located in a room by itself adjoining the manufacturing department. The pool is not separated by partitions from the manufacturing room, as is usual at creaming, Mr. BROOKS finding it more convenient to have no obstructions in the way, so that all the apparatus and machinery may be seen at a glance from the pool or vats. Better ventilation and sweeter premises, he thinks, also are secured by this arrangement. Butter and skim cheese are made at this establishment, the milk being set in the pool for the space of 12 to 24 hours—that is to say, the morning's milk remains in the pool 24 hours, and the night's milk 12 hours, when the cream is removed, and the milk mingled together for skim cheese. We tested quite a number of samples of this cheese, and found it of such excellent quality that a brief description of its manufacture may not be uninteresting to our readers.

How the Cheese Is Made.

The skimmed milk is brought to a temperature of 88°, and sufficient rennet added to produce coagulation in 45 minutes. It is then cut with perpendicular knives, lengthwise of the vat, and after standing 15 minutes, cross cut. The mass is held at a temperature of 88°, and no additional heat is added, during what is understood as the scalding process. Instead of working the curd, as is usual in some factories, the curds here are only turned over. They are kept in the whey about five hours, or until the acid is developed sufficiently to be detected by the odor; but in no case should it be carried so far as to be perceptible to the taste. The whey is then drawn and the curds removed to the sink, salted and put to press in the usual manner.

The Churn and Churning.

At this factory a revolving churn is used. It is barrel-shaped, six feet long by three feet in diameter, and is operated from the engine with a belt. After the butter has formed it is washed in the churn simply by adding water and moving or rocking the churn forward and backward with the hand. It is rinsed in this way twice in the churn and then removed to the butter bowls. Here it is just flattened out and pure Ashton salt sprinkled on, only one-half the salt required being used. The batter is then doubled over and worked. At the next working the remaining salt is added and the butter treated as before. It is then thrown into the packing tub, which is immediately immersed in the pool, where it stands till next morning. It is then worked over and packed for market. The proportion of salt used is one pound to 20 pounds of butter. The butter is packed in Orange Co. pails, and a layer of fine salt is put upon the butter when the lid is put on and the tubs closed. Sales of butter have been made here during the Summer at 35 cts per pound.

Results.

The machinery and apparatus at this factory differ somewhat from those at other factories, but everything seems to be arranged for convenience, while the premises are kept very neat and cleanly. During the month of August 36 pounds of milk made 1 pound of butter and 3 pounds of "skim cheese." This shows a lighter skimming than is practiced at some of the butter factories which we have visited, but Mr. BROOKS believes it profitable to make a good quality of cheese, and some of the samples which we tested were scarcely inferior to that made of whole milk.

We should say that a quality of cheese like that tested by us would be cheap at 10 cts per pound. If we assume this as the average price received, we have the 36 pounds of milk yielding the following results, viz: one pound butter at 35c., 3 pounds cheese at 10c., making 65 cents. Now, 36 pounds of milk on the basis of 1 pound of cheese for 10 pounds of milk would yield 3 6-10 pounds cheese which at 14 cents per pound amount to, say 51, cents. Thus, in comparing the profits to be derived from the milk manufactured under the two systems, we find a balance in favor of butter and skim cheese of 14 cents on every 36 pounds of milk. Something of course must be deducted for extra labor in making the butter, but it must be evident that milk, when properly managed on Mr. BROOKS' system, yields better returns than when made into cheese alone.

The Herdsman.

WINTER CARE OF STOCK.

ONE word to the readers of the RURAL NEW-YORKER in regard to the Winter care of live stock. Do not act on the penny-wise-and-pound-foolish plan of starving the stock for the sake of a little hay to sell. Remember that what the cattle lose in flesh this Winter, they will have to make up next Summer. Always remember that to get a pound of meat, butter, cheese, or anything of the kind, the substance of a pound must be given in some manner or shape. There is no possible chance for cheating in this business. The man who undertakes to cheat gets cheated himself. Better feed the cattle—say ten bushels of corn meal through the Winter, in addition to their regular feed, and have them come out good and sleek in Spring than to have them come out just able to stand up. I think if the readers of the RURAL try this policy, they will not be sorry for it. I think the words of the Wise Man—"The liberal soul shall be made fat"—will apply to temporal things as well as spiritual.

A. S. NASH.

Responsibilities of Highway Commissioners in Michigan.—The Supreme Court of Michigan has recently decided that Highway Commissioners and their sureties are responsible for damages resulting from defective bridges, and not the townships or municipal corporations.

The Vineyard.

GRAPE VINES FROM SINGLE EYES.

I HAVE read almost everything in your paper within the last year except the very thing I wish to know. Can you, or some of your many readers, tell me the process of propagating grapes, on the one eye system? Can it be done without artificial heat? For instance, will one eye of a grape cutting grow in the open air, as a general rule? I have a chance seedling grape growing in my garden which I have named the "Goodale Grape," of *very* great promise, ripening from the 15th to 20th of August, with a rich, fine flavor, perfectly free from pulp or a foxy taste. It is three weeks earlier than Hartford Prolific with the same exposure. Yours truly, GEO. GOODALE.

GRAPE vines are propagated from what are termed "single eye cuttings" in the open ground, but seldom with as good results as when planted in a propagating house, where artificial heat can be applied.

The usual practice is to make the cuttings in Fall or early Winter, severing the canes about a half inch above the bud and two inches below, with long-jointed sorts. If the internodes are short, then the length of the cutting need not be so great. After the cuttings are made, store them in damp sawdust or sand and place in a cool cellar, being careful not to let them become too dry. In Spring, as soon as the earth is warm and dry enough to work readily, plant the cuttings in light, finely pulverized soil, setting them perpendicular, leaving the bud just even with, or a little below the surface of the soil. Press the earth firmly about the cuttings; and then cover the entire surface of the bed with sawdust tan-bark, or spent hops, to the depth of one or two inches. Cut straw or chaff will answer, but is more likely to blow away than the other materials. No further attention need be given the cuttings except to pull up any stray weeds that may possibly push through the mulch. In some localities and soils this system of propagating the grape is said to produce most excellent vines.

But it must be remembered that some varieties grow much more readily from cuttings than others; and your new seedlings may be easily propagated from cuttings or quite the reverse. This, of course, will only be learned by experimenting with the cuttings.

VINEYARD NOTES.

Barren Vines.—I have some Isabella grape vines; they grow well during the Summer but freeze down every Winter. I never trim till March. How can I keep them from freezing?—M. W., *Oil City, Pa.*

PRACTICE the more sensible plan of pruning in the fall and protecting the vines by bending down and covering with earth.

Arboricultural.

ARBORICULTURAL NOTES.

English Walnuts in California.—A California paper says a Col. P. BOQUETTE of Visalia has raised some English walnuts equal, it thinks, to any produced anywhere, and adds:—They were fully one-third larger than those imported, with which they were compared, and full of plump, rich kernel of excellent flavor, decidedly superior to the foreign nut or those brought from Los Angeles. This is the first year of bearing of the tree from which they were taken, the product of which has astonished every one conversant with the capacity of such trees. The walnut tree is a hardy one in that valley, very prolific, in no wise affected by frost and will produce as many dollars to the acre as any crop that can be cultivated. Our valley might be made, with a very small outlay of labor, to supply the whole State with these nuts, and it even might produce a quantity sufficient for export if the growing of the walnut was entered into as a business by some of our enterprising orchardists.

New Ornamental Cherry.—A remarkable sport of May Duke Cherry has been produced in the grounds of M. FERDINAND MESSANGE of Baillonville. The leaves became narrow at the end, so as to resemble those of the peach, or even the willow. Some are 8 inches in length and an inch in width; others are 4 inches in length, and about the third of an inch in breadth.—*Belgique Horticole.*

Galvanized Wire on Fruit Trees.—An English journal says, "We have not found galvanized wire injurious to the branches of fruit trees out of doors."

Diary of a Ruralist.

DAILY RURAL LIFE.

FROM THE DIARY OF A GENTLEMAN NEAR NEW YORK CITY.

Laurel-Leaved Willow.—*Dec.* 11.—I have just received a note from a friend in Northern Wisconsin, who, speaking of the great destruction among tender plants in Winter, says that our common Laurel-leaved Willow is perfectly hardy there, withstanding 30 to 40 degrees below zero. This species of willow is one of the prettiest in cultivation, the leaves being large, green on both sides, but the upper surface shines as though varnished. I do not think it makes a large tree, and would probably not be valuable for timber, but for a handsome hedge or windbreak it could scarcely be excelled, especially in very Northern localities. It certainly would be preferable to the poplars now being extensively planted along the line of the Northern Pacific Railroad, to protect the track from snow. Perhaps Mr. R. S. ELLIOTT of the Kansas Pacific Railroad has tried this plant on the plains, and can tell us all about its value for the purposes named. If not, and he wishes to try it, he can obtain cuttings of Eastern, if not Western, nurserymen. For ornamental culture the plants should be severely pruned every year, as this causes new and vigorous shoots to be produced, the leaves upon which will be nearly double the size of those on unpruned plants. An old specimen in my garden has been treated in this manner for the past eight or ten years, and is still as vigorous as when first set out. The plants grow very rapidly while young, and cuttings will grow five or six feet high the first season, if planted in rich soils. Willows and poplars are not the best kind of trees to cultivate for firewood, but they would probably be better than corn, and somewhat cheaper; besides, there is danger of the corn supply giving out, especially in unfavorable seasons, and then a little poor wood would be better than none.

For a rapid-growing tree, with hard, firm wood, we have nothing that excels the Buttonwood (*Platanus occidentalis*), and it may be grown from cuttings almost as readily as the willow. The advantage of this tree is that the wood of the young shoots and branches is very hard, consequently make good fagots. Of course I do not recommend this tree for large timber, because a man would have a sorry time trying to split his Winter's firewood out of a large tree.

Tigridias and Mice.—*Dec.* 12.—Probably most persons who have cultivated *Tigridias* are aware that both field and house mice are very fond of the bulbs. I have always had more or less trouble with these pests during the drying of the bulbs in Fall, for the mice will come from all directions to obtain this, to them, delicate morsel. And after putting away the bulbs, one needs to be constantly on the watch to prevent the depredations of mice. I have been more troubled this season than ever, for the mice would climb the rafters of my furnace room where the bulbs are hung up to dry, and then descend a wire to the bags containing them; but I beat them at this game, by covering the rafters with new tin, and then commenced a crusade against the whole tribe, by baiting traps with the bulbs. Mice and rats will venture further for a taste of *Tigridia* than for cheese, or any other substance for which these little creatures are supposed to have a liking. From present appearances, I am likely to be successful, and rid my greenhouse of mice, for they are daily growing scarce. Perhaps some housekeeper may put this hint to practical use when all others fail in ridding the house of mice, although *Tigridia* bulbs may be rather costly bait, if one has to purchase them for that purpose; but they can be grown almost as cheaply as onions after the first stock is secured.

A Beautiful Rose.—*Dec.* 13.—About a year ago my gardener purchased from one of our large florists a dozen plants of a Countesse de Bertha rose, which has proved to be one of the best perpetual blooming sorts that I have seen. The flowers are of a deep pink color, quite large, double, and elegant in form, and the fragrance is most exquisite, being entirely undescribable, but may be called a spiced-sweetened tea. A bad cut off when it begins to open, and placed in a room, will perfume the entire atmosphere within, for one or two days. The plants are very vigorous, not being subject to mildew in the house, and they bloom almost continually; even small plants struck from cuttings bloom when only a few weeks old. We may have more showy varieties, but there are few that will please amateurs better than the Countesse de Bertha.

Invited to Lecture.—*Dec.* 14.—I have received several invitations, of late, to visit Rural Farmers' Clubs and Societies, and lecture or read an essay upon certain subjects about which I am supposed to be well informed. Of course I appreciate the intended honor; but paying one's own expenses and traveling hundreds of miles in Winter is not half so agreeable as studying botany in a green-house, or entomology in a good, comfortable office. Then, I might disappoint my would-be admirers more by talking to them verbally than with my pen, consequently I must decline attempting to gain the honors of a public lecturer at such a cost to myself. There is one man who stands in need of all the time I have to spare, and that is myself. There are scores of subjects of which I am as ignorant as a Hottentot, and it would be a great pleasure to me to study them while I have the time and inclination. As it is said that "charity should begin at home," I beg to be taught before attempting to teach.

The Garden.

KEEPING TOMATOES FRESH.

I HAVE this day, Dec. 9th, taken to the store of a friend a basket of ripe tomatoes, fresh and as nice as they were last Fall when pulled from the vine. They were admired by a good many persons. A lady present asked if they had the same flavor that they had in their season, when on the vine. I handed her one and tasting it, replied: "Oh! how delicious and fresh! and such a rare treat. They taste just as they do in the Summer when fresh from the vine." Now these tomatoes sold out at retail at 15 cents per pound in a few hours. The next thing after tasting the tomatoes was, "How did you keep them?" I did it in this way: In the Fall, before the frost hurt them, I pulled the largest tomatoes and put them in my cold green-house; then, when there was danger of their freezing, I removed them into another green-house in which fire is kept, and lay them with the stem down on damp sand. Here they ripen slowly, and the moisture from the sand keeps them fresh. In pulling them, I leave a stem on them about two inches long; this is put into the sand when I place them on it. I used the Trophy tomatoes. I have tried other kinds, but they rot badly. The Trophy tomato being a late variety and very solid, I think is the best for keeping. This is the second season of my trying to keep tomatoes till Christmas and New Year. Those that I sold would have kept till Jan 1st, 1873, very well, I think. Has any one else tried to keep tomatoes? How, and with what success?

A NEW SQUASH.

SEED of a new kind of squash were handed me last June, which I planted; of these one came up and from this vine and vines running from the side of the main vine, I took 20 good marketable squashes, and nine or ten unripe ones. They are flat and shaped like the Turkish Turban squash. They weigh about from six to ten pounds; skin soft and a cream yellow; flesh thick and deep yellow. It is sweet, fine grained and dry; as good almost as a sweet potato when baked; a good keeper in a warm cellar and a handsome squash. During the Fall I sold a number of them from 25 to 30 cents each. Persons who bought them from me speak very highly of them and say that they excel the Hubbard squash for table use. I think so myself. They are certainly a very fine squash. I shall plant them next year altogether. The seed were presented to me by a friend who received them from the Department of Agriculture. J. F. HAAS.

Meadville, Pa.

DOES not our correspondent know the name of this squash, and where it originated?

NOTES AND QUERIES.

Inquiries for Gardeners.—A correspondent asks our correspondents to name the best early beet and early cabbage for market; also, whether the White Apple tomato is early or late.

The Swine-Yard.

PIG-PEN PAPERS.

Turnips for Breeding-Sows.—A correspondent of the Michigan Farmer writes: "Fed my breeding sows most of the time on turnips—the Sweet Russia, or Jenny Linds, as they are called here. This was their food during the latter part of the Winter and until grass grew, when they entered into the clover. They eat them readily and thrive on them. I consider corn very injurious to breeding sows, especially to the liner breeds. Potatoes and slops from the house are also good. I consider sugar beets very valuable for feeding breeding sows and store hogs, and I shall raise an acre for that purpose."

Amount of Pork from a Bushel of Corn.—Mr. MILTON BRIGGS of Kellogg, Iowa, says, in the Homestead, that various experiments have proved the fact that corn fed to hogs has produced all the way from two to twenty pounds gain a bushel, according to the different modes of preparing feed, and the age, breed or condition of hogs fed. He is satisfied that over one-half of all the hogs fed in Iowa do not produce over five pounds gross weight for each bushel of corn fed, which, counting hogs at $3 per hundred pounds, gives fifteen cents per bushel for corn.

Kidney Worms and Carbolic Acid.—A correspondent of the Farm Journal treated a sow as follows:—Dr. BROWN handed me a bottle of carbolic acid and told me to use it as follows:—Ten drops once a day in drink; then put thirty drops in one gill of hot vinegar and bathe the back over the kidneys once a day. I gave her the first dose on Thursday, March 21. On Sunday, the 24th, when I went out to feed her she raised her feet and took two or three steps to meet me. By Saturday, the 30th, she was as well and sound as ever.

Boiled Pumpkin for Swine.—T. R. C. asks if "there is any virtue in boiled pumpkins for food for swine." There certainly is. The pumpkin contains a good deal of saccharine matter. We do not happen to have at hand an analysis of the pumpkin to show just what its fattening qualities are, but there is no doubt that it is a valuable food for swine, to which we have fed hundreds of loads boiled; also to cattle for the purpose of making beef.

Scientific and Useful.

SCIENTIFIC AND USEFUL NOTES.

The First American Cent.—"F. S.," in the RURAL NEW-YORKER of Dec. 7th, is wrong in regard to the first American Cent. The so-called "Washington Pennies" were mere models or medals, and were not issued by the Government. The 1793 penny is the first of the American series, and there were plenty of these made in 1799; they can be found in any collection of note in this country.—C. W. I., *New York city, Dec.* 5.

I HAVE just noticed an inquiry made by a correspondent in the RURAL NEW-YORKER for Oct. 26, in regard to the United States cents. As I have made Numismatics a special study, I will answer his question. The copper cent was not issued for circulation until the year 1793, although several patterns had been struck off previous to that time. This cent of 1793 was very similar to those of later dates; but instead of the wreath, it bore around the words "one cent" a chain having thirteen links. This type was changed during the same year. Cents were issued annually until the year 1857, with the exception of 1815, when none were coined. In 1857 the small nickel cents made their appearance. In consequence of their issue, the greater part of the large copper cents of that year were returned to the Mint. Some of the cents are quite rare, and bring high prices when in good condition. It is difficult to collect a complete set. The cent of 1799 is the rarest of the series. It is said that the scarcity of cents of this date is owing to this fact:—A firm in Salem, engaged in the slave trade at that time, obtained a large quantity directly from the Mint, drilled holes in them and shipped them to Africa, to exchange them for slaves. The African chiefs would string them and wear them around their necks, prizing them very highly.—L. A. L., *Canton, N. Y.*

Hair Snakes.—I have just read your article on "Hair Snakes," and, being one of those "ignorant people" that still believe in hairs turning into snakes, I will give you one of my reasons for the belief. A few years ago I found a lock of hair, from a cow's tail, lying in the mud, where cattle were in the habit of crossing a ditch. Part of the hair was dry, lying out of the water, and the remaining part—that nearest the roots, about six inches long—was alive; that is, had motion, swam in the water and acted just as hair snakes usually do. Now, Mr. Editor, I don't say that the hair turned into snakes; they (the snakes) may have got into the hairs, just as that one got into your cricket; but I know, and am willing to be qualified, that the whole was originally a piece of a cow's tail.—THOMAS P. DICKSON.

To Color Sheep skins with the Wool on, the Country Gentleman gives the following recipe:—"Unslacked lime and litharge, equal parts, mixed to a thin paste with water, will color buff—several coats will make it a dark brown—by adding a little ammonia and nitrate silver, a fine black is produced. Terra japonica will impart a 'tan color' to wool, and the red shade is deepened by sponging with a solution of lime and water, using a strong solution of alum-water to 'set' the colors: 1 part crystalized nitrate silver, 8 parts carbonate ammonia, and 1½ parts of soft water, dyes brown—every additional coat darkens the color until a black is obtained."

Domestic Economy.

ODDS AND ENDS.

How to Make a Medley Picture.—I have been much interested from time to time, with descriptions and plans given in the RURAL NEW-YORKER for making articles for the adornment of our homes; and as I never saw the above work described, will tell your readers how to make a *very nice picture* at little expense. First, procure a piece of paste-board, (18 x 22 is a good size) the size that you wish your picture to be; then with some small steel engravings, taken from old magazines, or ladies books, select the prettiest or most prominent picture for the center, and with a weak solution of gum arabic, paste it in the center of your board, and proceed with the rest, matching the shade and figure as much as possible; and by trimming the blank from some, and placing it over the edge of others. Put those that have a view of the sky for the top of your picture, and those of ground, for the bottom; get of a milliner some white ribbon paper two inches wide, which paste on the edge of your board for a margin; cover with a glass and frame.

It requires some taste, and patience, to arrange the pictures nicely; the principal object being to arrange them so as not to show where they were put together, but to look like one picture.—MRS E. S. BOWER.

Remedy for Cold Feet.—Soak the feet in warm water, with a little Cayenne pepper in it, two or three times a week. Try this for a month, or longer, if necessary, and you will find it an excellent remedy for cold feet. I do not know why rubbing the back with the same would not bring J. J. B. relief. Sprinkle the inside of your stockings, lightly, with Cayenne pepper in the coldest weather, and your feet will keep warm during the day and every day until you change your stockings.—SUBSCRIBER.

Wax Flowers.—In the RURAL NEW-YORKER of June 22d, "N. A. N." tells how to make wax flowers. I would like to know what kind of paint she uses—whether she means the tube paints, or any sized bottles, of dry powder (as she merely said bottles); also, *why* one would need to buy two dozen sheets of white wax, when she instructs one how to sheet it.—ALICE.

SATURDAY, DEC. 28, 1872.

LAST WORDS FOR 1872.

IN closing the Twenty-third Year of the RURAL NEW-YORKER, its Founder would fain "rise and explain" at length, but lack of space forbids more than a brief retrospect. In reviewing the past year, and projecting future action, there are some questions which naturally arise.

1. Has the RURAL been what it should have been? In one sense, we answer Yes—better than we could afford for the amount of subscription received; for each yearly copy has cost us more than any subscriber has paid.

2. How, then, have we profited by its publication? We have been compelled to give more space to advertisements than we desired—the source from which our revenues have been derived, albeit we have rejected much advertising of a doubtful or objectionable character.

3. How are we to improve? By publishing advertising covers when crowded, and by increasing our advertising rates, if necessary.

4. What objections have been made to the RURAL? or how are we to meet them? A few correspondents think we give too many engravings—that they are used "to fill up and save money." On the contrary, these engravings are the costliest part of the paper, and are *never* put in simply to "fill up." They meet an increasing demand and growing taste among our readers. We aim to make them tell what cannot be told in words, especially those contained in the practical departments.

5. Are there any demands made upon us we have failed to supply? Very few, if any, at all consistent with the avowed spirit and purpose of the RURAL. We have aimed, and purpose hereafter, to meet our readers' wants and furnish them with practical instruction, gathered from all sources within our reach and means.

6. Is the RURAL to retrograde in character and contents? Not a whit! It is to receive more attention than business engagements the past year have permitted us to give it; and while we make no promises, we avow our purpose to give it, if possible, a higher character and nobler position before the close of 1873 than it has yet attained.

—Finally, we shall earnestly labor to render the RURAL NEW-YORKER more acceptable and valuable to its readers than it has been heretofore. Our experience and facilities will aid us in doing this; and now that we have become accustomed to the present style and form of the sheet (which we believe the best and most convenient), we can easily avoid any mistakes made the past year. With the aid of the ablest and most experienced Corps of Editors and Contributors, and the assistance of numerous Correspondents all over the land—together with superior Artists (designers and engravers), and a new and beautiful dress of Copper-Faced Type—the RURAL ought to present evidences of "Progress and Improvement," in both CONTENTS and STYLE, and such its readers may confidently anticipate.

Renewing the assurance of earnest and continuous efforts to render the RURAL NEW-YORKER the best combined RURAL, LITERARY, FAMILY and BUSINESS Newspaper in the World, and cordially extending to all its readers the Compliments of this Holiday Season, we add Finis to Vol. XV., and close our labors for 1872.

"TO WHOM IT MAY CONCERN!"

THE Editor and Founder of this Journal hereby announces his retirement, as speedily as possible, from all business enterprises, offices, etc., not connected with its management. Having, during the past twenty years, *permanently* invested for the ostensible benefit of individuals and the public, through the persuasion of friends, various small and large amounts—and meantime held sundry time-absorbing and otherwise expensive offices of trust and honor, (but not one sinecure,) our ambition is amply satisfied, and the decision now made and recorded "means business." Therefore all persons wanting to borrow money, place us in office, or make us rich by the use of "only a trifle" of our currency, time or influence, are advised that we are "not at home" to, or persuadable by, any such applicants. In fact we cheerfully forego all such chances for fame and fabulous wealth as seductive speculators and systematic swindlers have aforetime beguiled us with, and notify each and all of like proclivities that we shall in future not only believe in but be guided by the wise Proverb which saith, "*All Labor is Profitable, but the Talk of the Lips tendeth only to Penury.*" And, moreover, all who have designs upon us will find said Proverb posted, in plain print, upon the walls of our office and sanctum.

—Meantime all persons specially interested in our welfare will please observe Subscription and Advertising Rates and govern themselves accordingly.

"CAN I AFFORD IT?"

A CORRESPONDENT of the RURAL NEW-YORKER renews his subscription, and sends the following reasons therefor, which we commend to the attention of our readers. We know the times are hard, that produce does not sell, that taxes are exacted and the family demands upon the purses of the farmer exhaust his resources. But here is the argument of a wife to her husband; and the husband found it conclusive:

"My wife said, 'Aren't you going to send for the RURAL NEW-YORKER, dear?'

"I replied, 'Can I afford it?' and I was about to detail the ways in which the money must go, when she said:

"Can you afford it? That is not the question. Can you afford to do without it? How much richer are you to-day for the $2.50 invested in it last January? Let me count up:—There was that cow, worth $40; got choked with a potato, and the RURAL told you how to save her and you did. Then the chickens were sick, and we cured them. There were fifteen out of fifty ill and the disease spreading, and the RURAL told you how to treat them and saved you 14 of the 15 ill, beside preventing sickness among the rest. The chickens were worth at least 25 cents each, so you saved there $3.50, to which add the $40 cow and we have $43.50. Then you told me that the fact that the RURAL had urged the use of rye and sowed corn for soiling the cows in the dry weather had saved you at least $50 to $100 in butter; if we put it at $50, we have $93.50 so far. Then you know that the market quotations at one time, when JOSEPH MEANS came here to buy your butter, saved you $20; for you would have accepted his offer if I had not looked in the RURAL and found that you could do better; so there is $113.50 saved. Then, when the horse disease appeared, you were going to take your horses out that stormy day, although they had begun to be sick. I had seen that the RURAL said give them rest, and keep dry and warm. You staid at home, and neighbor BROWN took his out. He lost one horse worth $150, and the other is not well yet. You saved your team, worth $400; but suppose, like Mr. BROWN, you had lost but one—there would have been at least $200 gone beside the inconvenience, which makes the sum that may reasonably be said to have been saved, $313.50. Now, I don't say anything about the benefits I have derived from the Dairy, Domestic and Floral Departments, leaving out the pleasure and instruction derived from other parts of the paper. But it has been at least proportionate to that which the RURAL NEW-YORKER has done for you. So you see, dear husband, it is not the question, 'Can I afford it?'—that is to be answered, but the other question, 'Can I afford to do without it?' My verdict is, No! Let's have it, by all means!"

And so the farmer sends us his subscription. Others may be considering the matter in a similar way, and this wife's summary of benefits may help them to a solution; hence we give it.

RURAL NOTES AND QUERIES

Postage on Seeds, Bulbs, Roots, Etc.—Our readers will be glad to learn that both the Senate and House of Representatives have passed a bill reinstating the old rates of postage on seeds, bulbs, roots, plants, etc., for which there has been so much clamor of late in consequence of the rulings of the Postmaster-General. The amendment passed permits the passage of four-pound packages through the mails, as formerly, at the postal rate of two cents for four ounces. The act is to take effect immediately; but it will not take effect unless the Postmaster-General is pressed to send instructions at once to the postmasters of the country directing its enforcement; for postmasters cannot act without instructions, and the issue of these is often delayed months after an act of Congress goes into effect, such is the red tape machinery of the Department.

The Title Page and Index, given in this number, occupy so much space that we are obliged to omit various Departments, Illustrations, &c. But to all who save the RURAL the very complete and copious Index must prove invaluable, and we think will be appreciated. It points to a vast amount of valuable and interesting matter—practical, scientific and literary—and such, in quantity and quality, as cannot be obtained elsewhere for the meager cost of the volume.

Wheat, Abroad, continues firm. The English papers do not encourage their readers to hope that prices are to be lower. The Continental sources of supply are canvassed with a good deal of care, and the conclusion is not favorable to the British consumers. Doubtless there would have been more activity and a greater speculative demand but for the financial disturbances which the increase in the rate of discount on the part of the Bank of England caused.

To Correspondents.—Yes, we are always glad to receive correspondence on practical subjects, provided it contains personal experience or observation in relation to any branch of husbandry. We try to give all such articles space—not always in detail, but the gist of them if not the whole. We invite such contributions. We did not suppose it was necessary we should say so until the receipt of several inquiries of late.

Encouraging Vermont Agriculture.—The State Board of Agriculture has received the usual appropriation from the Legislature, and the State Dairymen's Association an appropriation of $500. Prof. COLLIER is re-elected Secretary of the Board, which has voted to hold fourteen meetings (for discussion, and in various parts of the State, we suppose,) during the next two years.

American Pomological Society.—We learn from Hon. MARSHALL P. WILDER, the venerable President of the organization, that the Quarter Centennial meeting of the Society will meet in Boston, September 10, 11 and 12, 1873. The notice is given thus early that other horticultural societies may so fix the date of their exhibitions as to avoid the necessity of staying away from this.

Acceptable.—MARY E. D., of La Harpe, Ill., remits us $2.50 and writes:—"Please send me the good old RURAL, the best of all papers. I cannot live any longer without it. Also send me a premium list; I will make up a club. I can also contribute a few Western items, occasionally. I will look for Premium Engraving." All right, Madame; both club and items will be acceptable.

Massachusetts Ag. College.—The number of students who have attended this College during 1872 is 171. The total appropriation and gifts, including receipts from sales and tuitions, to the college have amounted to $530,000. And yet this is found inadequate to meet the wants and develop the plans of its management.

"The Best Paper."—A venerable New Hampshire subscriber, Mr. LEONARD WALKER, in remitting for 1873 writes:—"I have passed my three score and fifteen years, have taken a good many Agricultural papers, but I like the RURAL NEW-YORKER better than any other I ever had."

INDUSTRIAL SOCIETIES.

The Western New York Hort. Soc. meets at Geneva, January 8 and 9.

The Nebraska State Hort. Soc. holds its Winter meeting at Omaha, Friday, Jan. 3.

The Ohio State Board of Ag. meets at Columbus, O., the first Tuesday in January, 1873.

The Indiana State Board of Ag. meets at Indianapolis the first Tuesday in January, 1873.

The National Grange of the Patrons of Husbandry meets at Washington, D. C., Jan. 8, 1873.

The Illinois State Board of Agriculture meets at Springfield, Ill., the first Tuesday in January, 1873.

Western New York Hort. Soc.—The 18th Annual Meeting is to be held at Linden Hall, Geneva, commencing Jan. 8. It promises to be an interesting and profitable meeting.

The Pennsylvania Fruit Growers' Society holds its Fifteenth Annual Meeting at Reading, Pa., commencing Jan. 15, at 2 o'clock, P. M. The programme includes the discussion of five horticultural topics, and the meeting will doubtless be both interesting and profitable.

Milk Producers' Association of Massachusetts and New Hampshire.—The following are the officers elect of this organization for the ensuing year: *Pres.*—Dr. GEORGE B. LORING of Salem. *Vice-Pres'ts.*—J. W. Robertson of Quincy, Mass.. Henry F. French of Concord, Mass., and B. F. Hutchinson of Milford, N. H. *Sec.*—Daniel Round of Norfolk, Mass. *Treas.*—Hammond Reed of Lexington. *Directors*—Geo. B. Loring, J. W. Robertson, Daniel Round, Hammond Reed, G. M. Baker of Lincoln, Geo. W. Sanderson of Littleton, Thomas W. Ward of Shrewsbury, Mass., Silas E. Stowe of Grafton, Mass., B. F. Hutchinson of Milford, N. H., Reuben Lewis of Groton, Mass., William S. Pillsbury of Londonderry, N. H., N. H. Clark of Plaistow, N. H., Marshall Kimball of Mason, N. H., C. H. Haskell, Little River, Mass., Jonas Fay of Southboro', Mass., and Benjamin Derby of Concord, Mass.

Publisher's Desk.

RICH HOLIDAY PRESENTS

FOR OUR AGENTS AND SUBSCRIBERS!

WORK AND WIN!

All Actual and Intending Agents of MOORE'S RURAL who wish to make themselves or their friends Handsome and Useful HOLIDAY PRESENTS should send in Clubs (or parts of large Clubs) soon as possible, and select the Presents from our Premium List on preceding page. Most articles can be sent promptly—by first return Mail or Express. We desire to aid in making a host of people happy during the Holiday Season—so, Agents, please hurry up your Clubs in order to secure Premiums for yourselves, and also copies of "Birth-Day Morning" for all Subscribers who pay $2.50. We are already sending our Christmas and New Year Gifts. An Indiana Lady to-day (Dec. 9,) sends a Club, selects a pair of Gold Sleeve Buttons (with the initial of a friend) and requests her Premium "by the 20th of Dec., without fail." And it will be forwarded at once—ahead of time.

RENEW NOW!—All who wish the uninterrupted continuance of the RURAL (as we trust all subscribers do) should renew their subscriptions at once, either by handing their money to the nearest Club Agent or remitting it to us direct. Prompt attention to this request will prevent the delay which often necessarily occurs on and after Jan. 1st. *Renew at Once!*

HINTS, REQUESTS, SUGGESTIONS, ETC.

All Our Readers will Please Note that this week's RURAL closes the year, when most subscriptions expire,—and also that a prompt renewal is necessary to secure its uninterrupted visits. Moreover, remember that the RURAL is not a re-print of a daily or other journal, but that its reading matter, illustrations, etc., are prepared, at great expense, expressly for its readers. Furthermore, "don't forget to remember" that in addition to furnishing the best paper of its class, we give the best premium, as every subscriber paying $2.50 receives a post-paid copy of "Birth-Day Morning," a Superb Steel Engraving—ready for framing, without extra charge.

—All persons whose subscriptions expire this week will find either the figures 1199, or no figure at all, after name on address label.

How to Renew.—Hand your subscription to the nearest Club Agent, or remit direct to us by Post-Office Money Order, or send the money in a Registered Letter, at our risk. By sending $2.50 you will secure the RURAL for 1873 and a copy of our superb Premium Engraving, "Birth-Day Morning," which is alone worth twice the price of the paper. Or, if you don't want the Engraving, you can join or form a club of ten at $2 per copy. For Club Premium List see any late number.

"Progress and Improvement."—MOORE'S RURAL for 1873 will be better than ever before, in both CONTENTS AND STYLE. It will appear in a NEW DRESS of Clear and Beautiful Copper-Faced Type, and present other **Decided Improvements.** Agents and subscribers will please note this, and if they tell their friends, so much the better.

Clubs Coming!—Our first Club for 1873 came just a month earlier in the season than the first for 1872, and eight of its ten members paid $2.50 each in order to secure the Premium Engraving. Others are coming, and the Campaign is fairly opened. "Push on the column," good recruiting friends of the RURAL BRIGADE! Now is the Time to Work and Win!

The Premium Picture is sent to All who pay $2.50 for a copy of the RURAL one year, and *not to those who only pay the club rate.* Club subscribers can secure the Engraving, however, by adding 50 cts. to the usual club price ($2.) Don't forget this.

Send for the Documents!—Our new Show-Bill, Supplement, Prospectus, &c., are *now ready* and will be sent *free and post-paid* to all applicants disposed to form clubs. Send for and use the documents!

Agents and others will please note that this is the best of all seasons to form or add to Clubs—and Subscribers that renewing is now in order.

HORSE EPIDEMIC.

A PHYSICIAN in a communication to a Buffalo paper about the Horse Epidemic, says:—"Externally I used and would recommend Dr. Trask's Magnetic Ointment to the throat, around the ears and on the forehead. This ointment contains tobacco and lobelia, and operates upon the mucous glands of the head and throat by causing an increased flow of secretion from them, at the same time by its relaxing effect removing the stricture and giving almost instant relief to the cough and breathing." It is kept by all Druggists.

SEMI-BUSINESS PARAGRAPHS.

Report on the Northern Pacific Railroad.—[*Dispatch to the Associated Press*] WASHINGTON, December 16.—The Commission appointed to inspect the Minnesota Division of the Northern Pacific Railroad, prior to its acceptance by the Government, made their report to the Secretary of the Interior, substantially as follows: "The section examined is found to be well located, both with reference to through and local traffic. The grades are light, three-fourths of the distance being below the average of thirty feet. The sharpest curve is three degrees in a radius of two thousand feet. The embankments and excavations are within the requirements of the law. The ballasting is well done with gravel. The rolling stock is uniformly of excellent quality and in good condition, and is amply sufficient for all present and near future requirements. The engine houses and repair shops are deemed to be adequate. The passenger and freight stations are specially commended for their neat and tasteful appearance. Mention is made of the emigrant houses at Brainard, Glyndon and Duluth, as being constructed with the furniture and cooking utensils for the free use of those intending to settle on the Company's or the Government's lands. The snow fences, water stations and telegraph lines are considered ample for their purposes." The report closes as follows:—"Having found this portion of the road to be judiciously located, well constructed and adequately equipped, and believing that it substantially meets the requirements of both the letter and spirit of the law and department regulations, the Commission recommend its acceptance by the Government." The report covers a distance of 228 miles.

Our Favorite Sewing Machine.—The cheapest and best sewing machine now manufactured for family use is probably the New Wilson. We certainly would use no other. It works with equal facility on muslin, woolen, cloth, cambric, tarletan, flannel and leather. It does not paralyze the spine, or wear out the operator in any way, neither does it demand an incessant stoppage to find out where the difficulty is. There is no difficulty. It runs smoothly and evenly, hems, fells, tucks, gathers and binds. It does the finest and most beautiful work on cambric and linen. It also has the merit of being cheaper than any other first-class machine, as it can be purchased for $50. The feeding device is an improvement on all other machines, and a special patent of the Wilson. It does not get out of order, nor break needles, nor slip, nor pucker the cloth. So complete has the Wilson Sewing Machine been made, by a skillful combination of brain and muscle, that it has left nothing to be desired. Salesroom at 707 Broadway, New York, and in all other cities in the United States. The Company want agents in country towns.

Watch No. 1176, Stem Winder—bearing Trade Mark "Frederic Atherton & Co., Marion, N. J."—manufactured by the United States Watch Co. (Giles, Wales & Co.), has been carried by me three months; its total variation from mean time being only five seconds during that time.—HENRY DE LANCEY, Engineer Phila. & Erie R. R.

Facts for the Ladies.—Mrs. Rev. W. V. MILLIGAN, Cambridge, Ohio, has saved with her Wheeler & Wilson Lock-Stitch Machine hundreds of dollars in the last ten years, without a cent for repairs. See the new Improvements and Woods' Lock-Stitch Ripper.

Clover Rubbers and Cleaners.—The simplest and best in market. Price $120. Made by ST. JOHNSVILLE AG'L WORKS, Mont. Co., N. Y.

Advice.—Send for free Price List. JONES SCALE WORKS, Binghamton, N. Y.

THE MARKETS.

MONEY AND TRADE AFFAIRS.

NEW YORK, Monday, Dec. 23, 1872.

THE event in Wall Street, since our last report, is a real sensation, out of the usual course of the man, by JAY GOULD. His recent successful "corner" of Northwest Stock becomes of secondary importance to his restitution of nine millions of dollars to the Erie Road, of which he was President under the extraordinary career of FISK, Jr., and himself. That this sum belonged to the Road, when he left it last Spring, is now self-confessed, but it is questionable whether it covers one-fifth part of the real damages which the malign and unprincipled rule of the GOULD-FISK administration brought upon the property.

It is stated that GOULD purchased in London and New York 200,000 shares of Erie Stock, in anticipation of his settlement with the present Directors, at 50 to 53 per cent. The price has since gone up to 60 per cent., and this has given additional importance to GOULD'S sudden action, and the whole affair has made him a power in the Stock Market greater than ever before. Opinions may reasonably differ as to the morality of the settlement, some people calling it compounding a felony, and blaming the Directors of the Road for agreeing to it. Others think they were right to save their stockholders nine millions of money, when tendered by GOULD in satisfaction of their civil suit, the moral question being left to the prosecution of the State.

Most of the other speculative Stocks are higher than on our last report. Pacific Mail has recovered to 78 per cent., and Western Telegraph has gone up to 81¼ per cent. On the Railroad list New York Central is 96⅜, Rock Island 110¾, Northwest 82⅝, do. D., Ohios 48¼, St. Paul 55½, Wabash 72⅝, Union Pacific 37⅝, and Lake Shore 95.

Gold has declined to 111¼ per cent., on the pre-payment of the Gold Interest on the Public Debt, due Jan. 1, and U. S. Stocks are something lower in sympathy with Gold, especially the 5-20s, used for remittance abroad.

Money has been very close through the week and rates extravagantly dear, but the Stock Brokers pay their way readily because their stocks just now go by contraries, and rise on dear money. But to merchants, railroad corporations and other parties wanting money at the close of the old year, the stringency is oppressive. The Banks are not in a condition to help them. Their averages for the week are as follows, compared with the previous returns:

	Dec. 14.	Dec 21
Capital	$88,019,200	$88,019,200
Loans	277,620,300	275,811,400
Gold and Greenbacks	58,347,400	57,389,500
Deposits	203,911,700	199,123,800
Circulation	27,533,700	27,522,700

PRODUCE AND PROVISIONS.

NEW YORK, Monday Dec. 23, 1872.

Receipts.—The receipts of the principal kinds of produce for the past week are as follows:

Corn, bush	112,500	Meal, bbls	500
Oats, "	131,700	Flour, "	60,300
Wheat, "	318,500	Eggs, "	1,252
Rye, "	400	Cotton, bales	26,200
Barley, "	21,200	Hops, "	460
Malt, "	7,900	Wool "	3,829
Seed, "	4,150	Butter, pkgs	14,298
Beans, "	5,900	Cheese "	15,850
Meal, bags	1,100	Lard, "	10,140
Peanuts "	2,300	Dried fruits, pkgs	1,512
Pork, bbls	7,200	Cut Meats "	17,100

Beans and Peas.—Mediums are very firm. Marrowfats are plenty and weak.

We quote Mediums, prime $2.70@2.75 per bushel; good do., $2.50@2.60; fair do., $2.00@2.25; prime marrowfats, $2.80@2.85; good do., $2.50@2.60; common and fair do., $2@2.25. Green peas at $1.80@1.90. Southern black-eyed peas, $2.70@2.75. Canada peas in bond, $1.12.

Beeswax.—Small sales at 33½@34½c. for Western and Southern.

Butter.—The market continues very firm and extreme prices are readily paid for all fancy stored and the prime of fresh receipts. The coming week will be dull and the grocery trade particularly will be busy with holiday items. There is a large stock of Canadian butter, and if we have the steady market here that is promised by its present shape we may look for considerable supplies from that quarter.

Orange Co. pails, fine, including creamery, 36@38c.; Penn. and N. J. pails, good to fine, 26@35c.; common, —@—c.; selections, half tubs, 32@36c.; extra half tubs, 33@40c.; half tubs in lots, 28@30c.; good to prime firkins, 27@29c.; do. Welsh, Pail, 27@28c.; Welsh tubs, fair, 26@28c.; other grades of State, 18@22c.; Western Reserve, choice, 21@22c.; Western fair to good, 13@15c.; common, 10@11c.; greasy butter, 7½@8½c.; State dairies, tubs on, 23@32c.; do. all firkins, 23@30c. Rolls, choice, 26@28c.; do., fair to good, 20@24c.; do., common, 16c.

Cheese.—There is the customary home trade for the season, but wholesale parcels are immovable. A few fancy factory are held for future use at 14½@15c.

We quote State factory, choice, 14@14½c.; good to prime, 13½@13¾c.; fair, 12@13c.; State dairy, 12¾@13¾ for good to prime; 10@12c. for fair lots; for Ohio factory, 10@11½c. for fair to prime; English dairy, prime, 13¾@14c.; fair do., 11¾@13c.

Cotton.—Prices are a trifle higher, with more inquiry from exporters. We quote:

	Uplands.	Alabama.	N. Orleans.	Texas.
Ordinary	17¾	17¾	17¾	17¾
Good Ordinary	18¾	18¾	18¾	19⅛
Strict Good do.	18¾	19	19¼	19½
Low Middling	19¾	19¾	19¾	19¾
Middling	20⅛	20⅜	20⅜	20⅜
Good Middling	21¾	22¾	22¾	22⅝

Dried Fruits.—The general market is weak with large supplies and a light inquiry.

Southern apples, 4@4½c.; do. sliced, 6@9c.; Western, 5¼@5¾c. Pealed peaches at 14@15c. for Ga., 13@15c. for Va., and 16@18c. for North Carolina. Unpeeled peaches at 4½c. for quarters, and 5½c. for halves. Cherries, 22@23½c. Plums, 11@13c. Blackberries, 9@9½c. Raspberries, 33@34c.

Eggs—Are offered freely at the unmixed prices. We quote at 34@35c. for Western fresh, 35@36c. for State and Pennsylvania, 37c. for Jersey. Limed at 25@26c. for Western, and 26@27½c. for State.

Flour.—The shipping demand is improving in low grade stock. The general market is not active. Prices are same as last week.

Superfine State	$5 90	@	6 30
Common extra do	7 00	@	7 05
Good to choice do	7 10	@	7 15
Fancy do	7 20	@	7 80
Superfine Michigan, Indiana, Ohio, Iowa	5 90	@	6 50
Extra do	6 90	@	7 05
Choice extra do	7 10	@	7 85
Shipping brands round hoop Ohio	7 00	@	7 25
Trade brands do	7 30	@	9 25
Good to choice white wheat extras	7 90	@	8 65
Fair to very choice extra Minnesota	7 50	@	9 00
Common to fair extra St. Louis	7 10	@	8 30
Good to choice do	8 55	@	11 00
Extra Southern	7 10	@	9 15
Good to choice do	9 20	@	13 00
Rye, common to fine	4 80	@	6 50
Corn meal, Western	3 40	@	3 50
Buckwheat flour	3 70	@	4 35

Fresh Fruits.—There is no wholesale trade in apples, and best prices are only realized for fancy showy holiday stock. There is not much attention given to ordinary domestic fruit and nuts at this season, fancy foreign sorts having a special call. California pears are quoted as before. Grapes quiet. Cranberries have sold fairly.

We quote—Apples, common, $1.25@1.75; do. fair to good, $2@2.50; do. fine, $2.75@3.25; do. lady, $4@8. Pears—Cooking, ₱ bbl, $5@6. Grapes.—Catawba, 6@8c.; Isabella, 3@5c. Cranberries, prime, per crate, $3.25@3.50; com. to fair, $2.50@3; bbls., $9@10.50; choice bbls., $11@12. New Virginia peanuts, $1.40@1.75.

Grain—Wheat is very firm at $1.48@1.57 for No. 2 Spring, $1.49@1.50 for No. 1 do.; 1.65@1.80 for Winter red Western; 1.80@2 for amber. Rye at 93@95c. for State and Western. Canada West barley, $1.14@1.15. Malt $1.25@1.40 for Canada; $1.17@1.20 for Western. Corn is weak at 65¼@65c. for old mixed Western; 64@65¼c. for new mixed do. Oats are weak at 45@48c. for mixed Western; 44@46 for black; 45@47c. for white.

Hops.—Prices are 5c. higher, with an excited market. We quote State at 45@55c.; Eastern 42@52c.; Western 42@52c.; Bavarian 50@55c.

Hay and Straw.—Prices are higher.

We quote new shipping hay $1.15@1.20; retail do., $1.40 @1.75; salt, do., 70@90c.; clover, 80@90c. Straw at $1.30 @1.45 for long rye, $1@$1.20c. for short rye; 80@90c. for oat.

Provisions.—Mess pork is depressed with large arrivals. Old on spot jobbed out $13.25, new do. $ 3. 75, new do. for Dec. $13, do. for Jan., Feb. and March $12.75. Beef dull at old rates. Beef hams quiet at $33. Cutmeats—Smoked hams, 11@12¾c.; shoulders, 6@6¾c.; pickled hams, 9¾@11¼c.. do. shoulders, 5c. Lard is lower; 7¾c. for Western steam on spot, 7¾c. for Dec., 7¾c for Jan. Bacon easier; long clear 6¾c. on spot and for Winter months, short do. 7 1-16. Tallow lower, quoted at 8@8⅝c. for common to prime.

Poultry and Game.—We are getting large supplies and prices are low.

We quote prime N. J. and Bucks Co. turkeys, 16 @17c., State and Western, poor to best, 14@16c. Chickens, Western, 7@12c.; State and near points, 12@14c. Geese, 12@15c. Ducks, 13@16c.

Game quotations:—Venison, whole, 12@13c.; do., saddle, 19@21c. Canvas-back ducks, $1.75@2.50; red heads, $1@1.25; mallard, 75@87c.; teal, 40@60c.; rabbits, 35@40c.; hares, 60@70c.; quail, $2. Prairie chickens, 95c.@$1; partridges, State, 75c.@1; eastern, 62@75c.; wild turkeys, 22c.

Wool.—Small sales only are making, as there is no inclination to carry much stock over into the new year. Ohio fleeces 60@70c. for medium to extra; 60@65c. for State and Michigan; 60@63c. for Wisconsin; 50@55c. for Iowa, Illinois and Indiana; tub washed, 63@70c.; pulled at 60@68c. for fine and superfine.

Vegetables.—Trade in potatoes is ruling brisk at previous prices. Onions have advanced to $1@1.50 per bbl.

Seeds.—New clover is wanted by shippers, and prices have been advanced to 9½c. Timothy is dull at $3@3.25. Rough flax at $2.10@2.15.

Tobacco.—Sales are to meet immediate wants of consumers at late prices.

Sundries.—Honey at 28@30c. for dark and 32@35c. for white, in glass boxes; mixed lots, 21c. Cider at 8@10c. per gallon. Feathers, live geese, new, fine, per lb., 60@70c.; do. mixed, 40@50c.; hen, 7@9c.; vinegar, cider, ₱ gal., 20@25c.; do. manufactured, 15@20c.; newspapers, ₱ lb., 4@4½c.; white rags, 5@5½c.

COUNTRY CHEESE MARKETS.

Little Falls, N. Y., Dec. 21, 1872.

THE market at Little Falls for the week ending Dec. 21, has been quite brisk, but with no improvement in prices. About 200 boxes of factory dairies were delivered and sales were made at prices ranging from 10¾c. to 11¾c. The sales of factories amounted to 3,000 boxes and upward. We give quotations as follows:

Brockett's Bridge	13	Keys	13
Buell	13	Manheim	13
Cook & Ives	13½	Manheim Center	13⅜
Edmonville	13½	Newport	13½
North Fairfield	13	Newville Association	13½
Freeman	12¾	A. Smith & Co	13
Fulton	12	Smith Creek	13
Henderson Associat'n	13¾	Snell's Bush	13¾
Herkimer Co. Cent'l	13¾	St. Johnsville	14
Hasenclever	13	Little Falls Central	13¾

Butter comes in quite freely, and sales were made at 28c. to 32c. Some of the butter received showed evident signs of Winter make, being defective in color.

We have advices from abroad for the first of December. Our London correspondent says the demand in cheese has fallen off, as is customary at this time of year. American extra is quoted at 70s. to 72s.; fine, 65s. to 68s.; good, 56s. to 62s. The other descriptions sell as follows:—English Cheddar 76s. to 88s., Wiltshire double, 66s. to 76s., Cheshire medium 58s. to 68s., fine 71s. to 82s., Scotch 68s. to 76s. Dutch cheese —Edams 60s. to 65s., Goudas 56s. to 60s., Derby-shape 56s. to 64s. In butter the continued mild weather tells seriously on sales, fine only maintaining full rates. We quote:—Choumouls 128s., Corks 120s., Norgett 150s., Normandy extra, 140s., Canadian 50s. to 108s. The corresponding prices last year were for Clonmels butter 138s., American cheese 66s.

In Herkimer, N. Y., the weather is clear and cold with a little more snow. The sleddiug is excellent.

LIVE STOCK MARKETS.

NEW YORK, Dec. 21, 1872.

THE past has been the week for holiday stock, as it is always sent in a little in advance of the time for killing. Each year gives an additional quantity of this kind of stock, or rather of cattle and sheep, for there is not much attempt at display, in any other direction. The show of enormously fat beeves was very large and very fine. There were car loads of cattle which would dress 1100 to 1500 cwt. each, and besides being extremely fat, they were fine-boned and beautifully proportioned animals. Then there were sheep weighing 175 lbs. and upwards, two extremely fat wethers from Canada exceeding 250 lbs. High prices were at first obtained for these fancy animals, but they were so plenty that at last they sold little above first quality.

RECEIPTS OF LIVE STOCK

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Totals this week	8,956	76	856	20,418	43,116
" last week	9,126	137	1,376	19,553	50,480
Average last year	7,187	83	2,301	25,132	25,177

Beeves.—Considering the many extra large and very fat holiday cattle the amount of beef from the 8,956 head of the past week will be very large. Never before have we had so many choice cattle. Counting those which will exceed 9 cwt. dressed weight, and we have risen 500 head, while one car load were 15 cwt., and so fine that they sold at 16½c. per lb. Then there were others at 16c. and down to 15c., until the butchers were filled up with such cattle, when 14c. was all that could be obtained for a car 11 cwt. high grade Ohio fed animals. Offering these fancy cattle so low hurt the sale of good 7@7½ cwt. lit. steers so that they were sold at 12@13¾c., and decent 6¾ cwt. at 11c., while thin natives went at 10c. and poor Texans at 7c. A few fat 7 cwt. Cherokees reached 10@11c. The supply of Texans is still large, and the past has been a poor week in which to sell them, people preferring fat turkey to tough long horn beef to keep Christmas on. Considerable stock remains unsold, and there are more extra fat lots still to arrive. Thin beef sells very low in the dead meat markets, and mutton is also a glut, while low pork and plenty of poultry compete with beef.

The following are the closing prices for the week in comparison with what cattle brought one week ago, for net weight of beef:

	This week. Cents.	Last week. Cents.
Holiday cattle	11 @ 15½	15 @ 16
Choice beeves, ₱ lb	13 @ 14	14 @ 14¼
Good to prime	12 @ 13	12½ @ 13¼
Medium	11 @ 11¾	11½ @ 12
Poorest grade	6¼ @ 10	6 @ 10
Average sales	12 @	11¼ @ —

Milch Cows.—Trade is very dull, and is likely to continue so until after New Year's. Milk is plenty and low, and cow beef unsalable. Few fresh cows are sent in for sale, but they are sufficient for all wants. Prices are weak, but not quotably lower, fine milkers selling at $70@75 by the car load, and $80@85 for the best when selected out. Common to fair cows go at $10@65, very few running below $50.

Veal Calves.—Receipts of live calves are very light, and they begin to sell better, and at higher prices. There is no change in dressed, the markets being well supplied with them. A lot of pretty good grass or fed calves sold at $8.50 each, and some fine Bucks Co. milk veals at 9½c., though most of them went at 9c. The bulk of dressed sell at 10@12c., with prime at 13c., and poor down to 5c.

Sheep and Lambs.—The supply of sheep has been quite liberal considering the many heavy ones among them. There is a surplus of Christmas stock and prices have settled to about 8c. for the finest, 2 cars Canada 150@153 lbs. selling at 8c., though 2 of 220 each extraordinarily fat went at 8¼c., or $19.35 each. A lot of 127 lbs. sold at 6½c., and poor down to 4¾c. Fair sheep are worth 5¾@6¾c. Only a few lambs are sold apart from sheep, as 142 Canadas, 77 lbs. at 7¾c., and 48 State, same weight at 7¾c., with 88 of 62 lbs. at 6c.

Hogs.—Western dressed are coming in more freely, 950 reaching here yesterday, and 2,633 for the week. They are worth 4¾@5¾c., most sales being at 5c. Live have run down to 4¾c. for most lots. They are quoted at 4¾@4¾c., 15 cars selling at 4¾c. City dressed are also lower, with almost a panic in the market. Extreme heavy sold at 4¾@5c., medium weights at 5¼@5¾c, and pigs at 6c., with few sales at 6¼c.

SPECIAL NOTICES.

A Positive Radical Cure for Rupture.—The Elastic Truss Company, at No. 683 Broadway, New York, will send their Descriptive Circulars to any person afflicted with Hernia. This Truss can be sent by mail to any part of the country.

Watch Buyers Attention

The undersigned respectfully call the attention of persons contemplating the purchase of Watches to the superiority of the celebrated Nickle Movements, manufactured by Messrs. BOREL & COURVOISIER of Neuchatel. Gents' and Ladies' sizes, keys and stem winders, quarter-plate. These watches have Equilibrium escapements, chronometer balances, exposed ruby pallets, Breguet hair-springs and full ruby-jeweled, and combine all modern improvements in watch-making.

These Watches were awarded the Grand Prize at the Paris Exposition of 1867, and can be warranted to perform equal to those of the best manufacturers.

For sale by dealers throughout the United States, and by QUINCHE & KRUG, 191, Sole Agents for the Manufacturers. Salesroom, 15 Maiden Lane, N. Y.

ANDERSON'S AGRICULTURAL STEAMER, for *Steaming* FEED FOR STOCK, Heating Cheese Vats, Tannery Vats, Conservatories, &c. This Steamer is made of Wrought Iron, thoroughly riveted and finished in good style. It has a reliable Automatic or Self-regulating Water Feeder, Safety Valve, Vacuum Valve, Water Gauge Cocks, Whistle, &c., all complete. The boiler is peculiar in construction, being ONE COMPLETE DOUBLE BOILER WITHIN ANOTHER, the two communicating one with the other. It has an extraordinary amount of fire space for the size of the boiler—No. 3, a medium size, having 3,853 square inches of fire surface; consequently, it requires but little fuel to run it. Either wood or coal may be used for fuel.

It will cook more feed, or heat more water, in a given time, than any other Steamer of the same size or cost. It is more durable than any other, for the reason that the fire-box is made of wrought iron, and is *entirely surrounded with water*. We are also manufacturing

Anderson's Low Pressure Steam Heater, for Heating *Private Dwellings, Stores, Churches, Conservatories, &c.* We manufacture for all the territory east of Illinois.

MARION

UNITED STATES WATCH CO'S WATCHES.

REPORT OF JUDGES

TO THE GENERAL COMMITTEE

CINCINNATI INDUSTRIAL EXPOSITION:

GENTLEMEN—The Judges appointed to examine into the merits of the articles contained in Class 10, beg leave to make the following report:

No. 1650 United States Watch Company, Marion, New Jersey. These watch movements, the result of American capital, skill and perseverance as specimens of this branch of science and manufacture, rival those of European make. The watches exhibited by this Company are of all grades, from that of the most exact timekeeper, to the cheaper kind for the million. All are excellent of the kind, and are too well known and appreciated by the people to need further comment. First Premium is awarded to the United States Watch Company.

E. S. Wayne
James Powell
William H. Davis } Judges.

Price Lists furnished the Trade on application, inclosing business card. For sale by the Trade generally.

Ask your Jeweler to see the MARION

WATCHES.

BEWARE of worthless imitations with which the country is flooded. To avoid imposition, see that the words MARION, N. J., are engraved on the plate over the Main-Spring Barrel. All others are spurious.

INVESTMENT BONDS.

The Northern Pacific Railroad Company now has in full operation, with regular daily trains, 321 miles of road. A distance of nearly 200 miles more is constructed. The Minnesota Section, immediately on its completion, entered upon a satisfactory business, including local traffic and the large carrying-trade of the Northwestern British Settlements and the Hudson's Bay Company. The recently completed section of sixty-five miles, on the Pacific Coast, at once commands a profitable business between Puget Sound and the Columbia River, heretofore done by coastwise steamers. On the opening of Spring, with more than **500** miles of Road in regular operation, the Company will control the extensive and productive trade of the Upper Missouri, much of Montana and the Northwest. The earnings of the Road for 1873 will be large.

Arrangements for pushing construction vigorously the coming year are progressing satisfactorily.

Of the nearly Ten Million acres of land accruing to the Company in connection with the portion of Road now virtually constructed, some Two Million acres, of excellent average quality, are in market, and their sale and settlement progressing. The average price thus far realized is **$5.66** per acre—which is at the rate of more than **$100,000** per mile of road for the whole grant.

The Company has already begun the process of redeeming and cancelling its First Mortgage Gold Bonds, as they are now being received at **1.10** in payment and exchange for the Company's Lands.

With these accomplished results and most favorable prospects, the Company is now selling its First Mortgage 7.30 Bonds for the purpose of completing its line of road. We recommend them as a well secured and unusually profitable investment. They have the following elements of strength and safety: They are the obligation of a strong corporation: they are a First Mortgage on the Road, its Right of way, Telegraph line, Equipments and Franchises, and a first lien on its Net Earnings. In addition to this usually sufficient security there is pledged for the payment of principal and interest a Land Grant of **12,800** acres per mile of road through the States and **25,600** through the Territories. The rate of interest (seven and three-tenths per cent. gold) is equal now to about 8% currency. *Gold Checks for the semi-annual interest on the Registered Bonds are mailed to the Post-Office address of the owner.*

All marketable securities are received in exchange on most favorable terms. For sale by Banks and Bankers generally.

JAY COOKE & CO.,

Financial Agents Northern Pacific Railroad Company.

PRATT'S ASTRAL OIL

Has for the past four years been acknowledged as the safest and best illuminating oil for family use ever made. It is rapidly displacing all illuminating material in every part of the world where lamps are in use. Its safety and unequaled burning qualities have been tested by consumers in nearly every city and village in the United States.

WILLARD'S PRACTICAL DAIRY HUSBANDRY: A Complete Treatise on Dairy Farms and Farming, Dairy Stock and Stock Feeding, Milk, its Management and Manufacture into Butter and Cheese, History and Mode of Organization of Butter and Cheese Factories, Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,

Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority*. It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

PRACTICAL DAIRY HUSBANDRY embraces **516 Large Octavo Pages**, is handsomely and fully illustrated, printed on superior paper, and elegantly bound. It is a Subscription Book, and a liberal commission is given Agents who canvass Counties, &c. The Agents of the RURAL NEW-YORKER (especially those in Dairy regions) will do well to try the sale of this work. To any person residing where there is no Agent, or who cannot wait for one, the Publisher will send a copy of the work, post-paid, on receipt of the price, $3—(or for $5 the book and RURAL NEW-YORKER one year.) Address

D. D. T. MOORE, Publisher,
5 Beekman St., New York.

WEBSTER'S PATENT

BUTTON-HOLE WORKER.

Patented June 27th, 1871.

Awarded first premium at the American Institute and Maryland Institute Fairs, 1871.

Is one of the most important inventions of the age! The most perfect **Button hole Worker** ever *invented!* So simple that a child can work a more perfect button-hole with it than the most experienced hand can work without it. Every stitch is taken with the most perfect mechanical accuracy. Is used entirely independent of the sewing machine, and will last a life-time. Does away with pricking the fingers, straining the eyes, and with imperfect and irregular worked button-holes. They give universal satisfaction. Ladies who use them say that they are worth their weight in gold. Over eleven thousand sold during the first week of their introduction. Local and traveling agents wanted everywhere. They sell at sight, and give over 100 per cent. profit. Sample Button-hole Worker and sample Button-hole Cutter packed in a neat case, with full directions for use, together with sample of our new and novel way of canvassing, sent to any address on receipt of 65 cents. Orders by mail receive prompt attention. Address **WEBSTER M'F'G CO.**, Manufacturers, Ansonia, Ct. Please state in what paper you saw this.
